

ASX ANNOUNCEMENT

25 January 2018

DECEMBER 2017 QUARTERLY ACTIVITIES AND CASH FLOW REPORT

Highlights

- Water bore test holes on the margin of the Lost Dog orebody intersected:
 - **LDW005: 11 metres at 3.17 g/t Au from 10 metres**
 - **LDW001: 8 metres at 2.13 g/t Au from 13 metres**
- Water bore test holes 2.2 Km east of the Lost Dog deposit intersected highly anomalous gold mineralisation:
 - **LDW015: 2 metres at 1.21 g/t Au from 33 metres**
 - **LDW016: 7 metres at 0.56 g/t Au from 32 metres**
- Sterilisation drilling north of the Lost Dog deposit intersected:
 - **JD17D193: 13 metres at 2.92 g/t Au from 13 metres**
 - **JD17D163: 6 metres at 2.92 g/t Au from 39 metres**
 - **Including 3 metres at 2.50 g/t Au from 39 metres (transported regolith)**
 - **Including 2 metres at 5.04 g/t Au from 43 metres (granitoid saprolite)**
 - **JD17D205: 3 metres at 1.41 g/t Au from 48 metres**
- Water bore test holes west to south west of Black Cat testing palaeochannel regolith intersected:
 - **BCW012: 4 metres at 1.52 g/t Au from 57 metres**
 - **BCW005: 2 metres at 2.39 g/t Au from 84 metres**
 - **BCW004: 2 metres at 1.24 g/t Au from 48 metres**
- Phase 2 water exploration commenced.

Beacon Minerals Limited (ASX:BCN) (Beacon or Company) is pleased to present its Quarterly Activities Report for the period ended 31 December 2017.

The Company announced on 17 November 2017 that a broader drilling programme had commenced at Beacon's Jaurdi Gold Project in Western Australia.

The drilling programme primarily aimed at:

- Testing the eastern parts of the previously identified gold-in-soil anomaly which includes the area of the peak result of 600ppb gold.
- Testing numerous geophysical targets identified from the recently completed VTEM and Ground Gravity surveys. These holes were targeting, not only gold, but potential water sources for our future mining requirements.

A total of 224 vertical and angled aircore holes for 10,905m was completed at the Jaurdi Gold Project, which included:

- **Black Cat**
 - 23 vertical holes for 1,465m
- **Lost Dog**
 - 58 vertical holes for 2,773m
 - 143 angled holes for 6,667m

Figure 1: Drill Rig at Jaurdi Gold Project – November 2017

Subsequent to the Quarter Ended 31 December 2017

Beacon announced on 15 January 2018 that the aircore drilling conducted at the Lost Dog and Black Cat prospects for water exploration and sterilisation purposes was successfully completed during November and December 2017.

Lost Dog Water Exploration Drilling

Beacon's intention is to commence production at the Lost Dog deposit this calendar year with the Company in discussions to build its own processing plant. As part of this strategy, Beacon will require a substantial supply of ground water from palaeochannel-hosted aquifers to facilitate the processing of the Lost Dog ore. An extensive exploration effort has been directed towards understanding the potential for the Jaurdi paleo-drainage systems to host this water source. The airborne VTEM survey conducted in July 2017 identified two main palaeochannel systems within M16/529 and more extensively within E16/469 (Figure 2). The ground gravity survey completed in the latter part of 2017 assisted in narrowing the focus of the water targets.

A total of 58 holes for 2,773 metres was drilled testing both palaeochannels. Water was successfully identified in the northern palaeochannel system and water bores will be drilled, tested and if productive submitted for licensing.

Sample return from all holes were analysed for gold mineralisation. Holes drilled within the Lost Dog orebody intersected ore grade mineralisation including **11 metres at 3.17 g/t Au** (LDW005) from 10 metres and **8 metres at 2.13 g/t Au** from 13 metres (LDW001). Highly anomalous gold was identified 2.2 Kilometres east of the Lost Dog deposit in holes LDW015 and 016; intersecting **2 metres at 1.21 g/t Au** from 33 metres and **7 metres at 0.56 g/t Au** from 32 metres respectively (Table 1). This is a significant result and a follow up exploration programme will be undertaken by Beacon in due course.

Lost Dog Sterilisation Drilling

An area to the north of the Lost Dog deposit, which is likely to be the site for the milling facility, was systematically drilled using an aircore rig. A large part of this area also coincides with the gold in auger-soil anomaly identified in July 2017. The programme consisted of 143 angled holes for 6,667 metres and was completed on lines approximately 100m apart with hole collars at 25 metre spaced centres along the lines. Holes were angled at -60 degrees to magnetic east. This orientation was selected as other gold mineralised systems in the region, including the Black Cat system, dip to the west and southwest.

The geochemical results from this drilling can be viewed to be hosted in basically two regolith horizons including the overlying transported horizon and the underlying in situ regolith horizon. Viewing the results from the transported parts of the regolith profile, a new area of gold-in-transported regolith has been identified in the south eastern parts of the drilled grid. Gold is located within a deeper part of the regolith profile at around 40 metres below surface and generally at the base of the transported profile in reduced clay, sandy clay and base-of-channel sand. This is considerably below the position of the Lost Dog mineralisation, which is generally at depths less than 25 metres and probably represents a palaeochannel tributary coming into the main, deeper parts of the channel to the south. Of further interest is that this tributary is draining from the area where the recent drilling has identified anomalous gold (>0.10g/t Au) from the in situ, weathered granitoid part of the regolith profile. This makes this area a high priority for follow-up drilling. Significant intervals of mineralisation within the transported regolith include JD17D163, **3 metres at 2.50 g/t Au** from 39 metres and JD17D196, **1 metre at 3.03 g/t Au** from 35 metres (Figure 3).

The gold results from the in situ (weathered granitoid) part of the regolith profile are also of significant interest and to a large degree are coincident with the gold-in-transported regolith intercepts, albeit that they are elongated over a west-northwest – east-southeast zone, which has at least 500m of strike and is open to the east-southeast. It is possible that some of this anomalous gold may represent leaching of the base of channel gold down into the in situ regolith through water table movement, however, the distribution of the in situ gold anomalies suggest some structural control and the area to the east-southeast should be followed up with further aircore drilling. Significant mineralisation within the weathered granitoid includes JD17D163, **2 metres at 5.04 g/t Au** from 43 metres and JD17D203, **1 metre at 1.34 g/t Au** from 50 metres (Table 2).

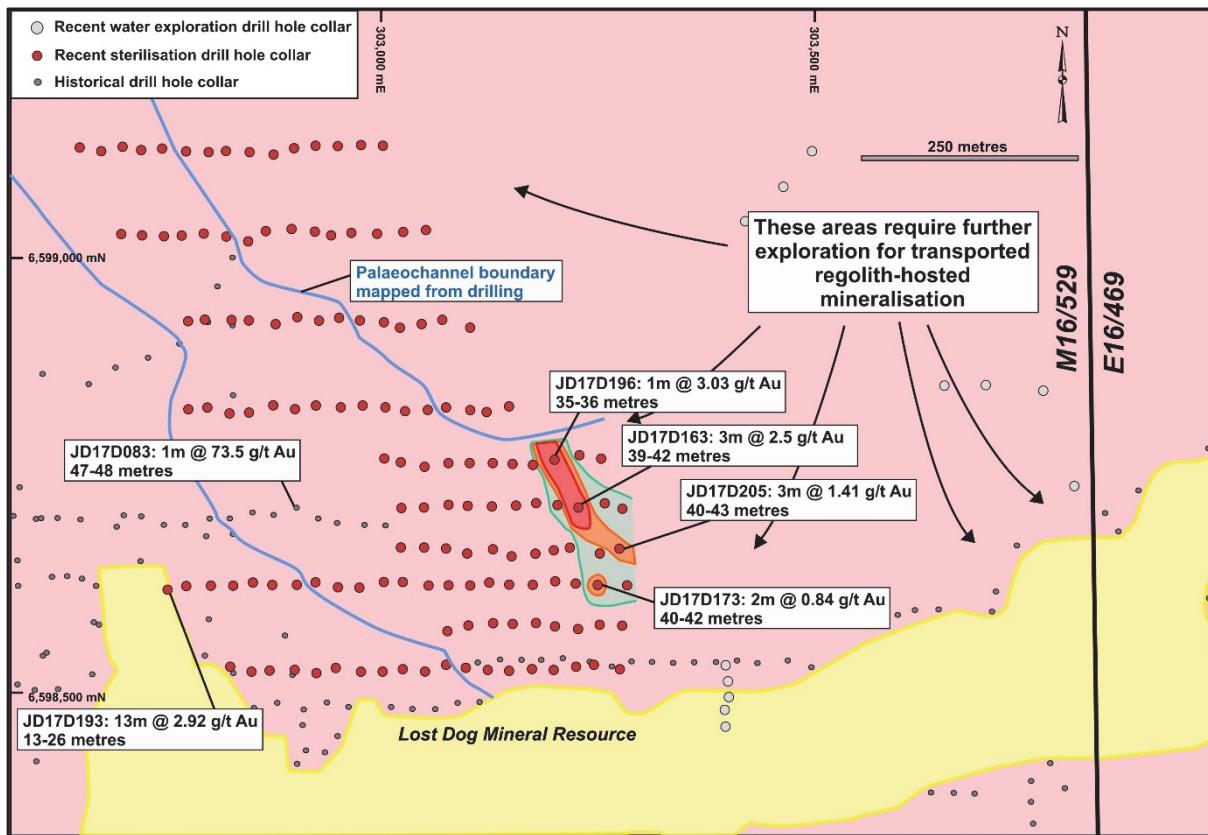

Figure 3: Recent sterilisation drilling north of Lost Dog showing anomalous gold in transported regolith

Extrapolation of this trend further to the east-southeast means that it passes through an area of no previous drilling, before hitting the Lost Dog north east mineralisation, where previous RC hole, JD17C190, intersected **1 metre @ 0.41g/t Au** from 50 metres in lower saprolite granitoid. To the south, but potentially still along strike from the newly identified in situ gold trend, is hole JD17C313, which intersected **2 metres @ 0.59g/t Au** from 29 metres in quartz-veined granitoid upper saprolite. It is possible that the JD17C190 and JD17C313 intercepts represent the south eastern most expression of this new in situ trend. The area between these two holes and the new trend, highlighted by JD17D163 (Figure 4), requires systematic testing with blade refusal aircore. This would cover parts of the Lost Dog north east mineralisation, where few holes have been completed to granitoid bedrock (blade refusal). The identification of both the transported and in situ gold mineralisation, by the recent aircore programme, means that further aircore drilling to the east and southeast is required to test for further transported regolith-hosted gold mineralisation and to test for a primary source within the underlying granitoid.

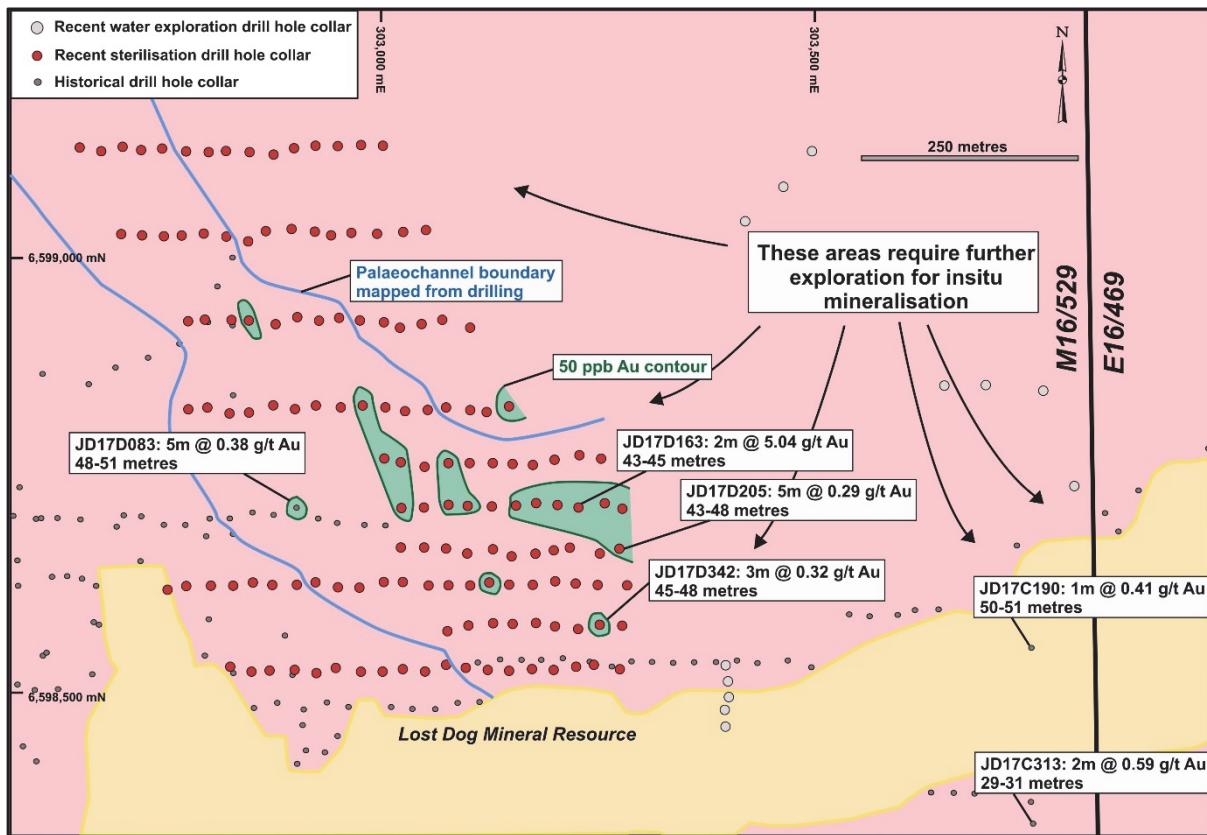

Figure 4: Recent sterilisation drilling north of Lost Dog showing anomalous gold in the weathered granitoid

							Upper saprolite

Black Cat Water Exploration Drilling

Vertical aircore drilling comprising of 23 vertical aircore holes for 1,465m was completed during November 2017 to test palaeochannel regolith identified by the 2017 VTEM airborne survey within M16/115. The targets were all satisfactorily tested, most being located in the western parts of the tenement, with one target located in the far eastern parts of M16/115, near the eastern tenement boundary and where the palaeochannel leaves M16/115 and continues to the east onto P16/2925 and 2926. All holes were drilled to blade refusal to provide a complete picture of both the transported and in situ regolith profiles and any associated gold geochemistry.

Exploration for water within M16/115 was generally unsuccessful with only one suitable target identified. A deep transported regolith profile was identified in the western parts of the tenement with the base of palaeochannel sands and sandy clay being up to 60 metres below surface, before passing into in situ mafic regolith after basalt, dolerite, gabbro and some intrusive granitoid/porphyry. Drilling across the interpreted channel system generally identified a deepening of the channel, where base of channel sands might be thickest and likely to contain appreciable amounts of water and the targeted sandy regolith was intersected as expected, but apart from BCW012, water content was low. In the eastern parts of M16/115, aircore drilling indicated a much thinner transported regolith profile with the deepest transported regolith being at 40 metres below surface with no base of channel sand horizon, although some green silcrete was intersected at the base of the transported profile in a couple of holes. Minor water was located below this silcrete horizon.

Historical drilling in the western parts of M16/115 had previously intersected highly anomalous gold, e.g. JHR164, **7m @ 2.51 g/t Au** from 60 metres at the bottom of the hole. The recent aircore drilling has also intersected anomalous gold from both the transported regolith profile and from the in situ part of the profile. BCW009 was drilled within 20 metres south west of JHR164 and intersected **1 metre @ 1.00 g/t Au** from 59 metres (Table 3). Further to the South-West by 400 metres, BCW005 intersected **2 metres at 2.39 g/t Au** from 84 metres in a quartz-biotite rich saprock (Figure 5). There are a number of other gold intercepts in both historical and recent drilling in the general area, highlighting that the underlying mafic rocks are highly prospective. In all, drill coverage is very sparse and even holes BCW019-021, in the far east have anomalous intercepts, meaning that the entire M16/115 tenement area requires systematic exploration for gold.

Phase 2 Water Exploration

Water bore drilling commenced on the 12 January 2018 targeting the most prospective sites identified in the recent drill programme. This programme will include the drilling of mine dewatering bores as well as production bores.

Figure 5: Project Manager Alex McCulloch conferring with Drill Foreman Scott Baily at production water bore 2 kms east of lost dog ore resource

CASH RESERVES

As at 31 December 2017 the Company had approximately \$6.4 million in cash reserves.

CAPITAL STRUCTURE

As at the date of this report the Company has the following capital structure:

Fully Paid Ordinary Shares (BCN)	2,013,961,284
Listed Options ex. \$0.025 on or before 1 August 2022	498,490,321
Unlisted Options ex. \$0.004 on or before 31 January 2022	80,000,000
Unlisted Options ex. \$0.025 on or before 5 May 2019	5,000,000

OTHER OPPORTUNITIES

Senior management and external consultants have undertaken desk top reviews, and where justified, field inspections. Discussions continue and shareholders will be advised immediately of any material outcomes.

Should shareholders have any questions regarding Beacon, please feel free to contact Executive Chairman Geoff Greenhill or Managing Director Graham McGarry.

COMPETENT PERSON STATEMENT:

The information in this report that relates to the Jaurdi Gold Project Mineral Resource estimation is based on information complied by Mr Richard Finch and Mr Darryl Mapleson, both full time employees of BM Geological Services. Mr Finch is a Member of the Australian Institute of Mining and Metallurgy, while Mr Mapleson is a Fellow of the Australian Institute of Mining and Metallurgy. Mr Finch and Mr Mapleson have sufficient experience that is relevant to the style of the mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'.

This ASX announcement contains information extracted from the following reports, which are available on the Company's website at www.beaconminerals.com.au.

- 15 January 2018 Jaurdi Gold Project – Drilling Update

The Company confirms that it is not aware of any new information or data that materially affects the exploration results included in any original market announcements referred to in this report and that no material change in the results has occurred. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcements.

SCHEDULE OF MINERAL TENEMENT INTERESTS

Beacon Minerals Limited provides the following schedule of mineral tenement interests held by the Company for the quarter ended 31 December 2017 as required by ASX Listing Rule 5.3.

Beacon Minerals Limited Mineral Tenement interest as at 31 December 2017;

TENEMENT	PROJECT/LOCATION	INTEREST AT THE BEGINNING OF THE QUARTER	INTEREST AT THE END OF THE QUARTER
	Jaurdi Gold Project		
M16/529	Jaurdi, Coolgardie	100%	100%
E16/0469	Jaurdi, Coolgardie	0%	0% ⁽¹⁾
M16/0034	Jaurdi, Coolgardie	0%	100%
M16/0115	Jaurdi, Coolgardie	0%	100%
P16/2925	Jaurdi, Coolgardie	0%	0% ⁽²⁾
P16/2926	Jaurdi, Coolgardie	0%	0% ⁽²⁾
L16/012	Jaurdi, Coolgardie	0%	100%

⁽²⁾ Beacon has executed an Option to Purchase Agreement with Australian Live-Stock Suppliers Pty Ltd, the holders of prospecting licences P16/2925 and P16/2926.

Disclaimer

This ASX announcement (Announcement) has been prepared by Beacon Minerals Limited ("Beacon" or "the Company"). It should not be considered as an offer or invitation to subscribe for or purchase any securities in the Company or as an inducement to make an offer or invitation with respect to those securities. No agreement to subscribe for securities in the Company will be entered into on the basis of this Announcement.

This Announcement contains summary information about Beacon, its subsidiaries and their activities which is current as at the date of this Announcement. The information in this Announcement is of a general nature and does not purport to be complete nor does it contain all the information which a prospective investor may require in evaluating a possible investment in Beacon.

By its very nature exploration for minerals is a high risk business and is not suitable for certain investors. Beacon's securities are speculative. Potential investors should consult their stockbroker or financial advisor. There are a number of risks, both specific to Beacon and of a general nature which may affect the future operating and financial performance of Beacon and the value of an investment in Beacon including but not limited to economic conditions, stock market fluctuations, gold price movements, regional infrastructure constraints, timing of approvals from relevant authorities, regulatory risks, operational risks and reliance on key personnel.

Certain statements contained in this announcement, including information as to the future financial or operating performance of Beacon and its projects, are forward-looking statements that:

- may include, among other things, statements regarding targets, estimates and assumptions in

respect of mineral reserves and mineral resources and anticipated grades and recovery rates, production and prices, recovery costs and results, capital expenditures, and are or may be based on assumptions and estimates related to future technical, economic, market, political, social and other conditions;

- are necessarily based upon a number of estimates and assumptions that, while considered reasonable by Beacon, are inherently subject to significant technical, business, economic, competitive, political and social uncertainties and contingencies; and,
- involve known and unknown risks and uncertainties that could cause actual events or results to differ materially from estimated or anticipated events or results reflected in such forward-looking statements.

Beacon disclaims any intent or obligation to update publicly any forward-looking statements, whether as a result of new information, future events or results or otherwise. The words 'believe', 'expect', 'anticipate', 'indicate', 'contemplate', 'target', 'plan', 'intends', 'continue', 'budget', 'estimate', 'may', 'will', 'schedule' and similar expressions identify forward-looking statements.

All forward looking statements made in this announcement are qualified by the foregoing cautionary statements. Investors are cautioned that forward-looking statements are not guarantees of future performance and accordingly investors are cautioned not to put undue reliance on forward-looking statements due to the inherent uncertainty therein.

No verification: Although all reasonable care has been undertaken to ensure that the facts and opinions given in this Announcement are accurate, the information provided in this Announcement has not been independently verified.

Notes

1. The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity that wishes to disclose additional information is encouraged to do so, in a note or notes included in or attached to this report.
2. If this quarterly report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, AASB 6: Exploration for and Evaluation of Mineral Resources and AASB 107: Statement of Cash Flows apply to this report. If this quarterly report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
