

Annual General Meeting – 30 November 2018

Mexico – Sierra Madre – Silver / Gold

Chile – Gold / Silver

Disclaimer

All information contained in this presentation is of a general nature. Potential investors are cautioned against using the content of this presentation, in isolation, for making investment decisions.

Best efforts have been made to ensure the accuracy of information contained (at the time of preparation). Where forward targets and/or assumptions have been included – all such instances are indicative only and subject to alteration and/or cancellation as and when the management of Santana Minerals Limited ('Santana') determines.

Research and advice of a qualified financial advisor or accountant are strongly recommended to anyone considering investing in listed company securities, including those of Santana.

The information in this presentation that relates to exploration targets, exploration results, mineral resources or ore reserve:

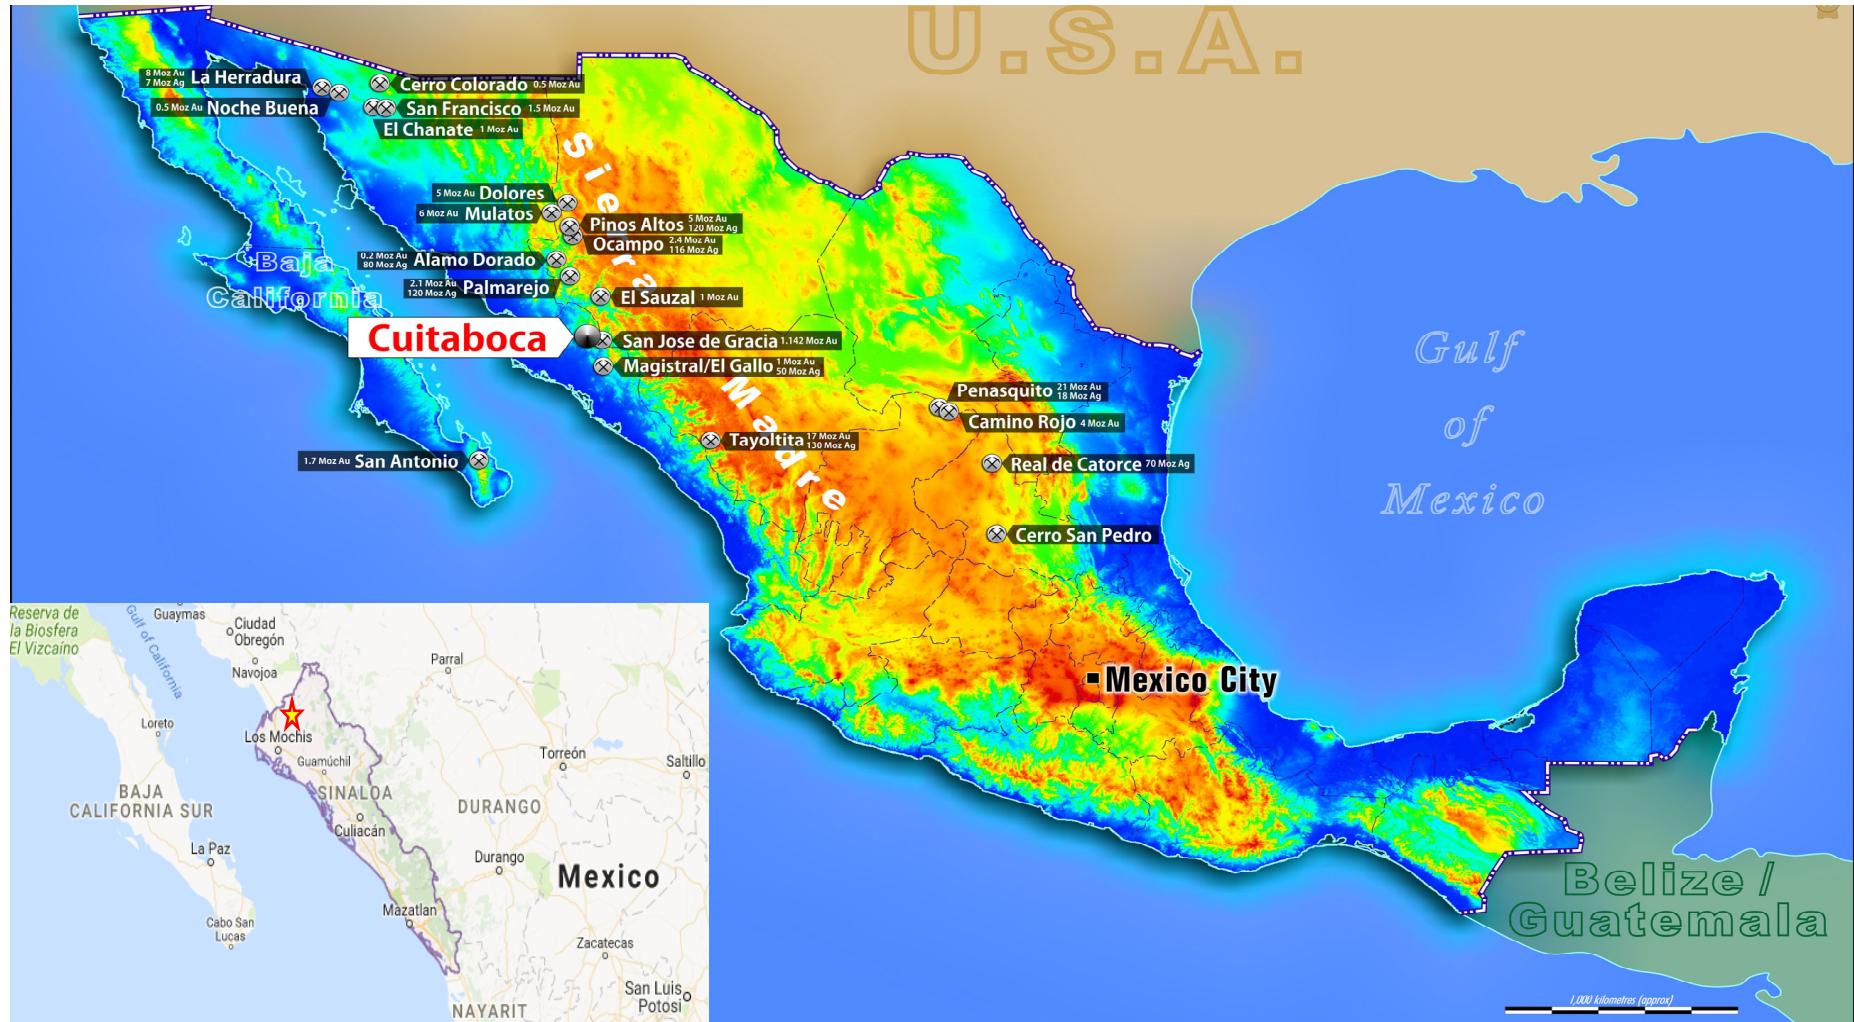

- (a) Relating to the Company's projects in Mexico is based on information compiled by Mr Jason Beckton who is a Member of the Australasian Institute of Geoscientists. Mr Beckton is a part time consultant to Santana.
- (b) Relating to the Company's projects in Chile is based on information compiled by Mr Mike Corey who is a member of the Association of Professional Geoscientists of Ontario (APGO) in Canada. Mr Corey is a part time consultant to Santana.

Each of Mr Beckton and Mr Corey have sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves".

Forward-looking statements in this presentation include, but are not limited to, statements with respect to Santana's future plans, strategy, activities, events or developments the Company believes, expects or anticipates will or may occur. By their very nature, forward-looking statements require Santana to make assumptions that may not materialize or that may not be accurate. Although Santana believes that the expectations reflected in the forward-looking statements in this presentation are reasonable, no assurance can be given that these expectations will prove to have been correct, as actual results and future events could differ materially from those anticipated in the forward looking statements. Accordingly, viewers are cautioned not to place undue reliance on forward-looking statements. Santana does not undertake to update publicly or to revise any of the included forward-looking statements, except as may be required under applicable securities laws.

The Sierra Madre Occidental

Mexico - The Sierra Madre is home to numerous large scale, world class silver mines

Cuitaboca – Primary Prospects

◆ Primary Targets

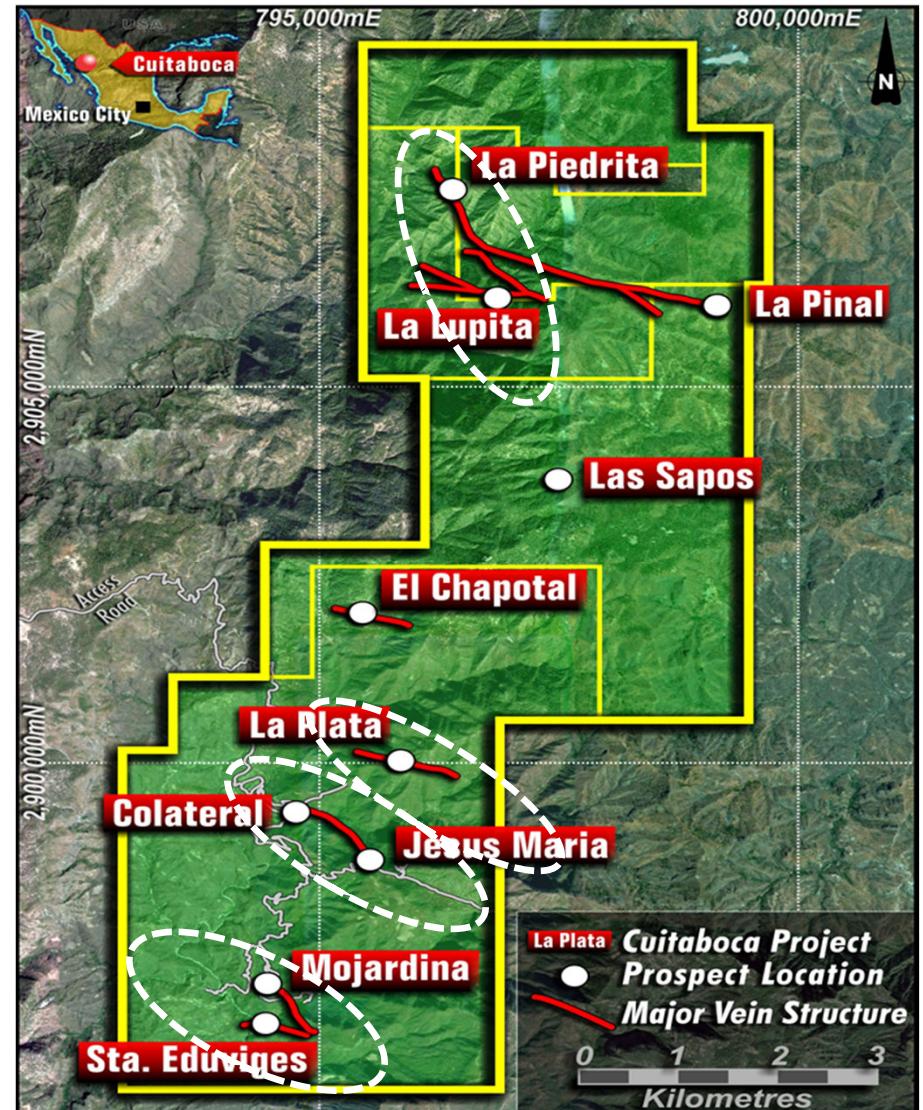

- Mojardina Prospect
- La Plata
- La Lupita/La Piedrita

◆ Geological Occurrence

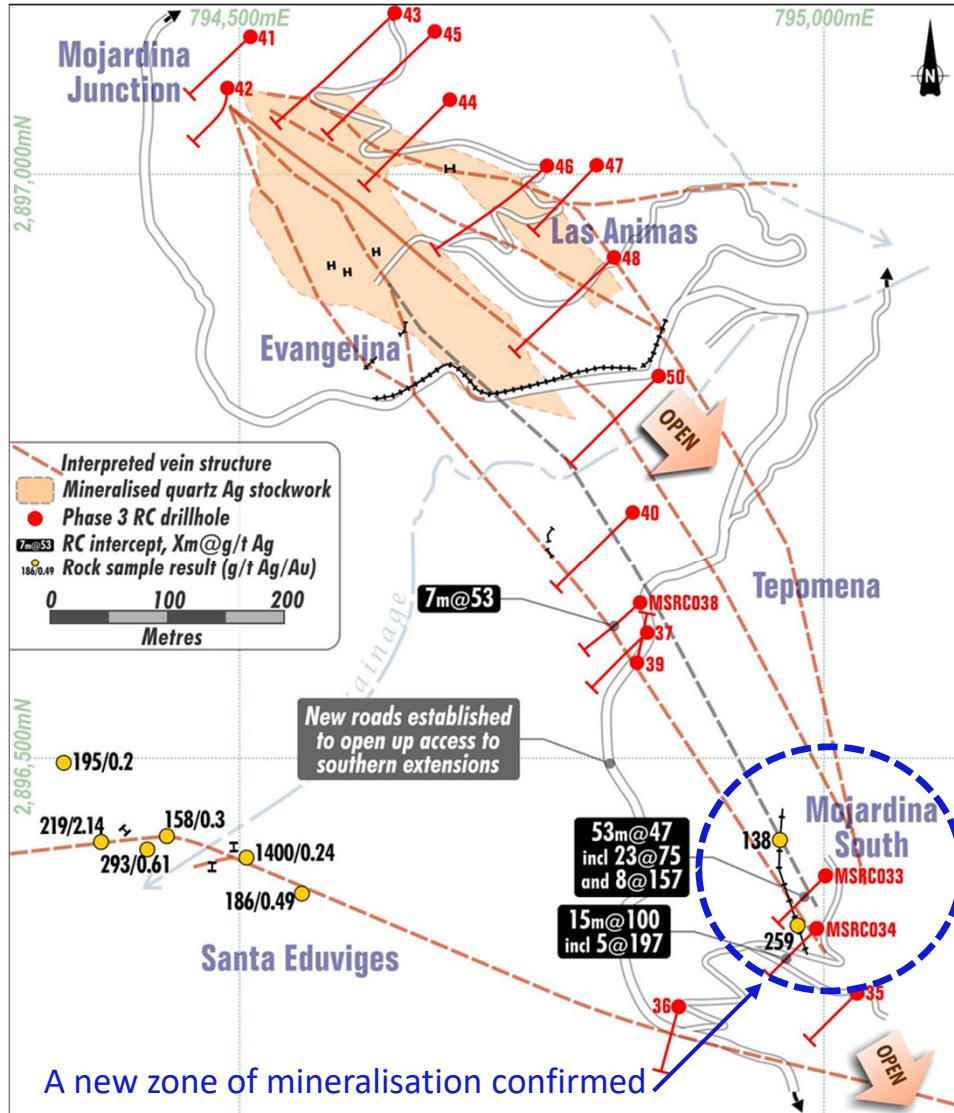

- Series of mineralised (silver dominant) parallel vein systems running NW-SE in direction
- Low-intermediate sulphidation style epithermal deposit
- Higher grades within hosting structures concentrated in areas of dip and strike flexure

◆ Previous Works

- Extensively mapped
- Diamond saw channel trenching along outcropping veins
- Three (3) RC Drill programs
 - ❖ 52 holes for 7,525m

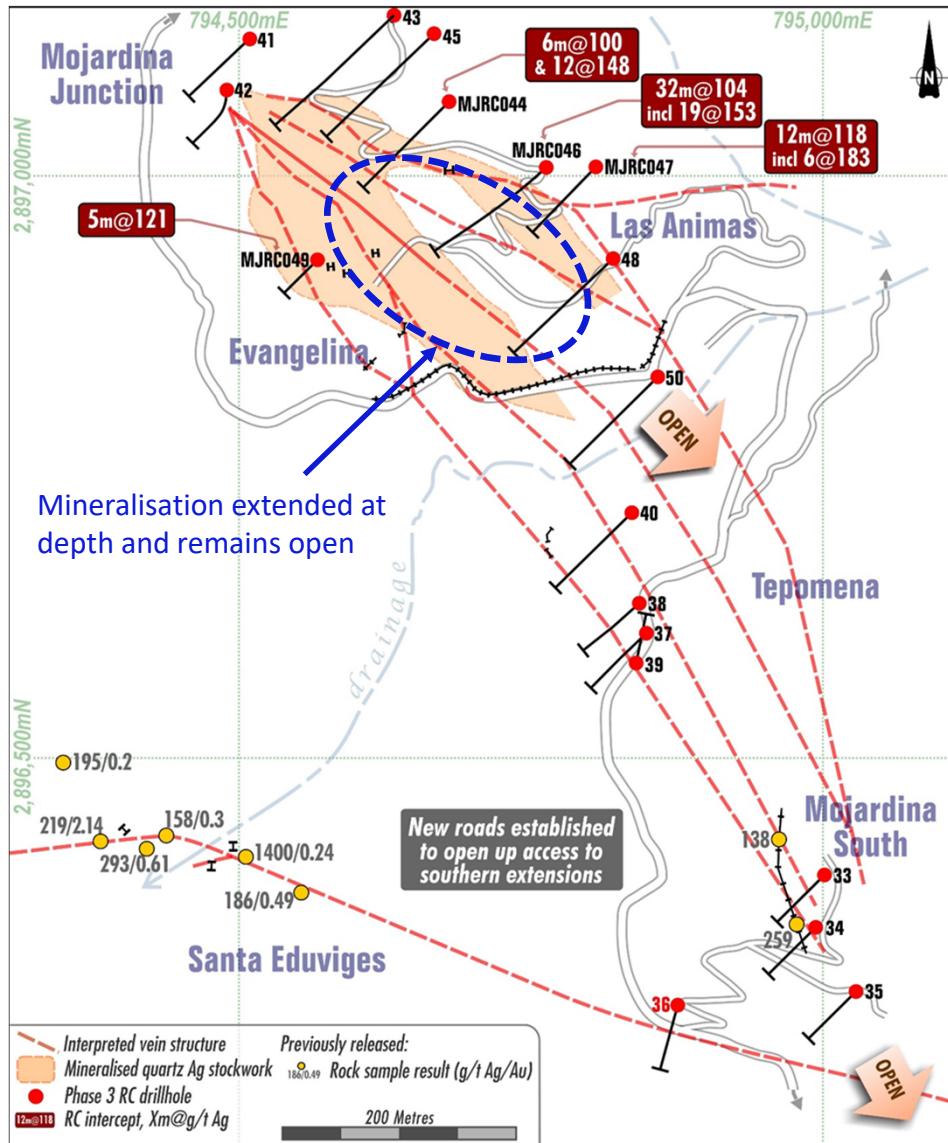

Mexico - Mojardina South

May/June 2017 – Phase 3 RC Drill Program

- ◆ Designed to test southern-most surface expressions of Mojardina structure :
 - 53m @47g/t Ag from 1m (MSRC033) including 23m @75g/t Ag from 30m; and 8m @ 157g/t Ag from 45m
 - 15m@100g/t Ag from 3m (MSRC034) including 5m @197g/t Ag from 12m
 - 7m @ 53g/t Ag from surface (MSRC038)

Mexico - Mojardina - mineralisation continuing at depth

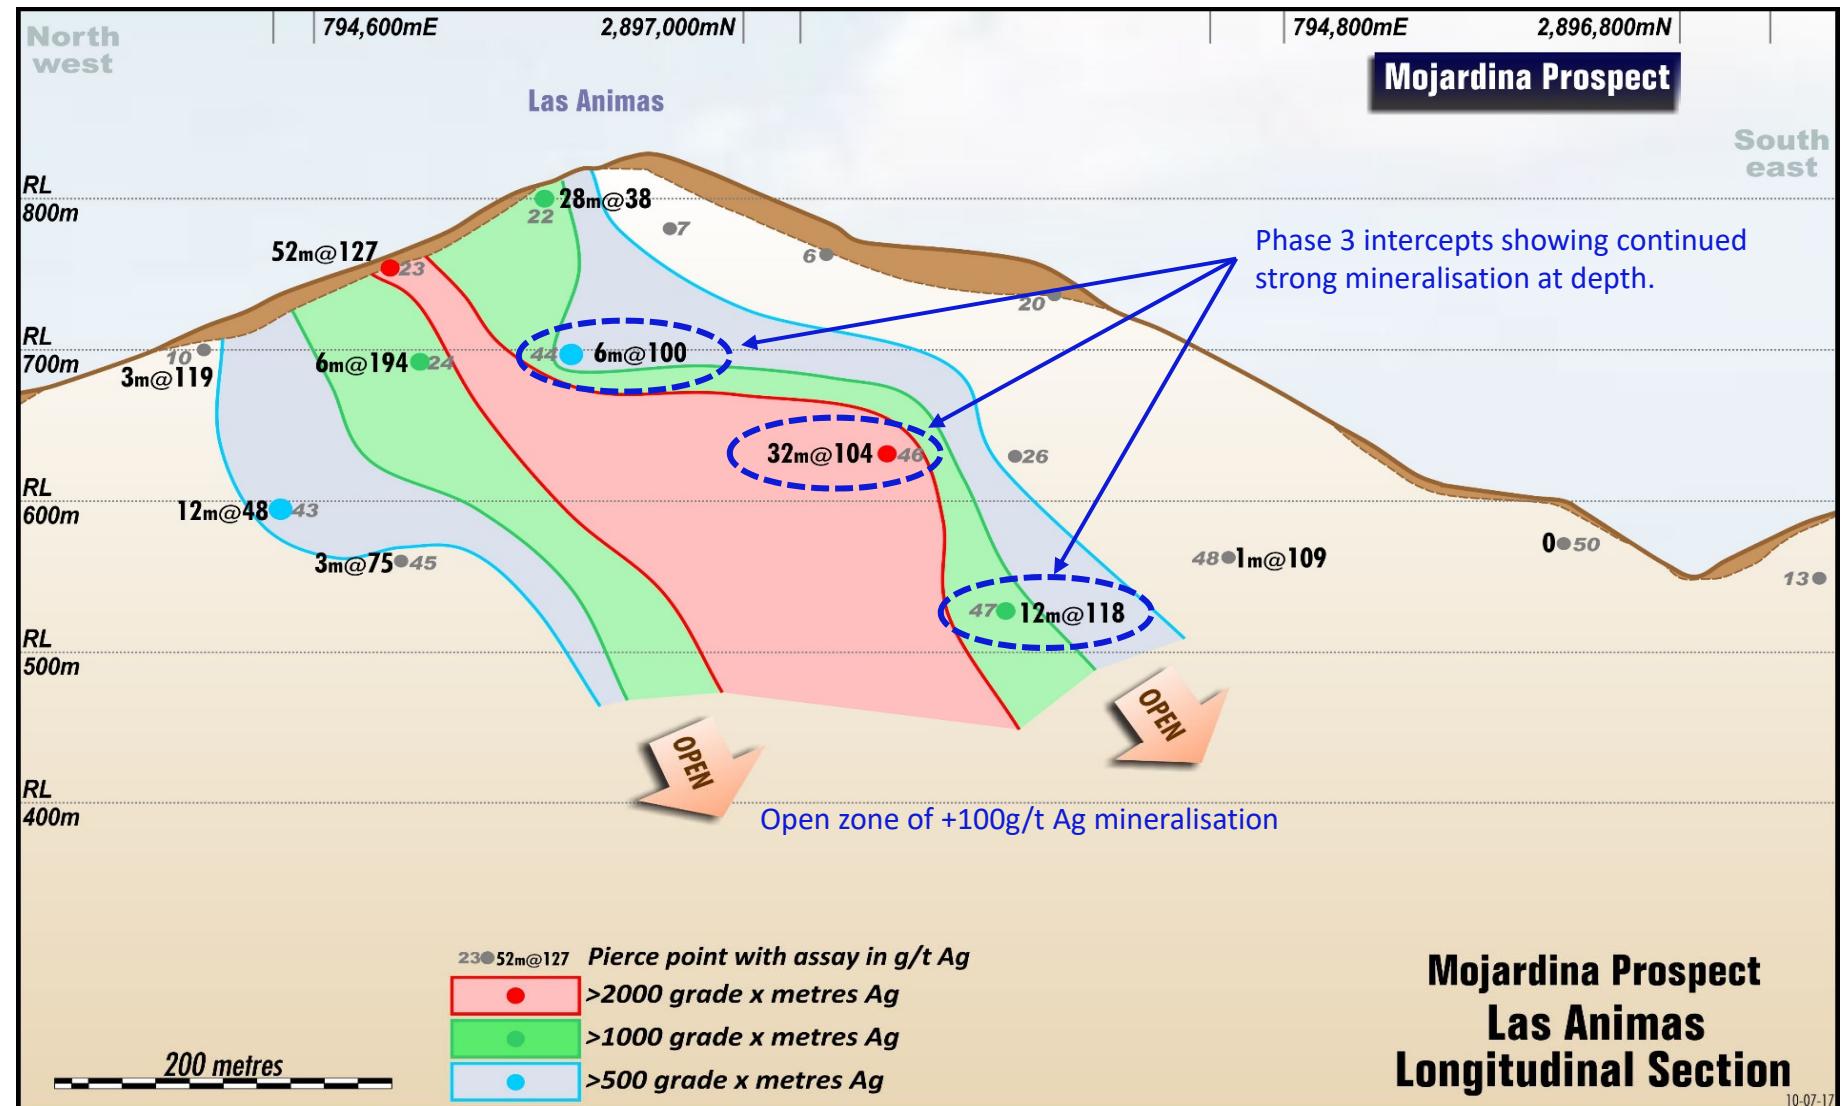

May/June 2017 – Phase 3 RC Drill Program

- ◆ Also tested below the two previously identified controlling vein systems of Las Animas and Evangelina.
 - 6m @ 100g/t Ag from 118m (MJRC044) and 12m @ 148 g/t Ag from 204m
 - 32m@104g/t Ag from 98m (MJRC046) including 19m @153g/t Ag and 5m @93 g/t Ag from 179m
 - 12m @ 118g/t Ag from 99m (MJRC047) including 6m @183g/t Ag
 - 5m @ 121 g/t Ag from 15m (MRRC049)

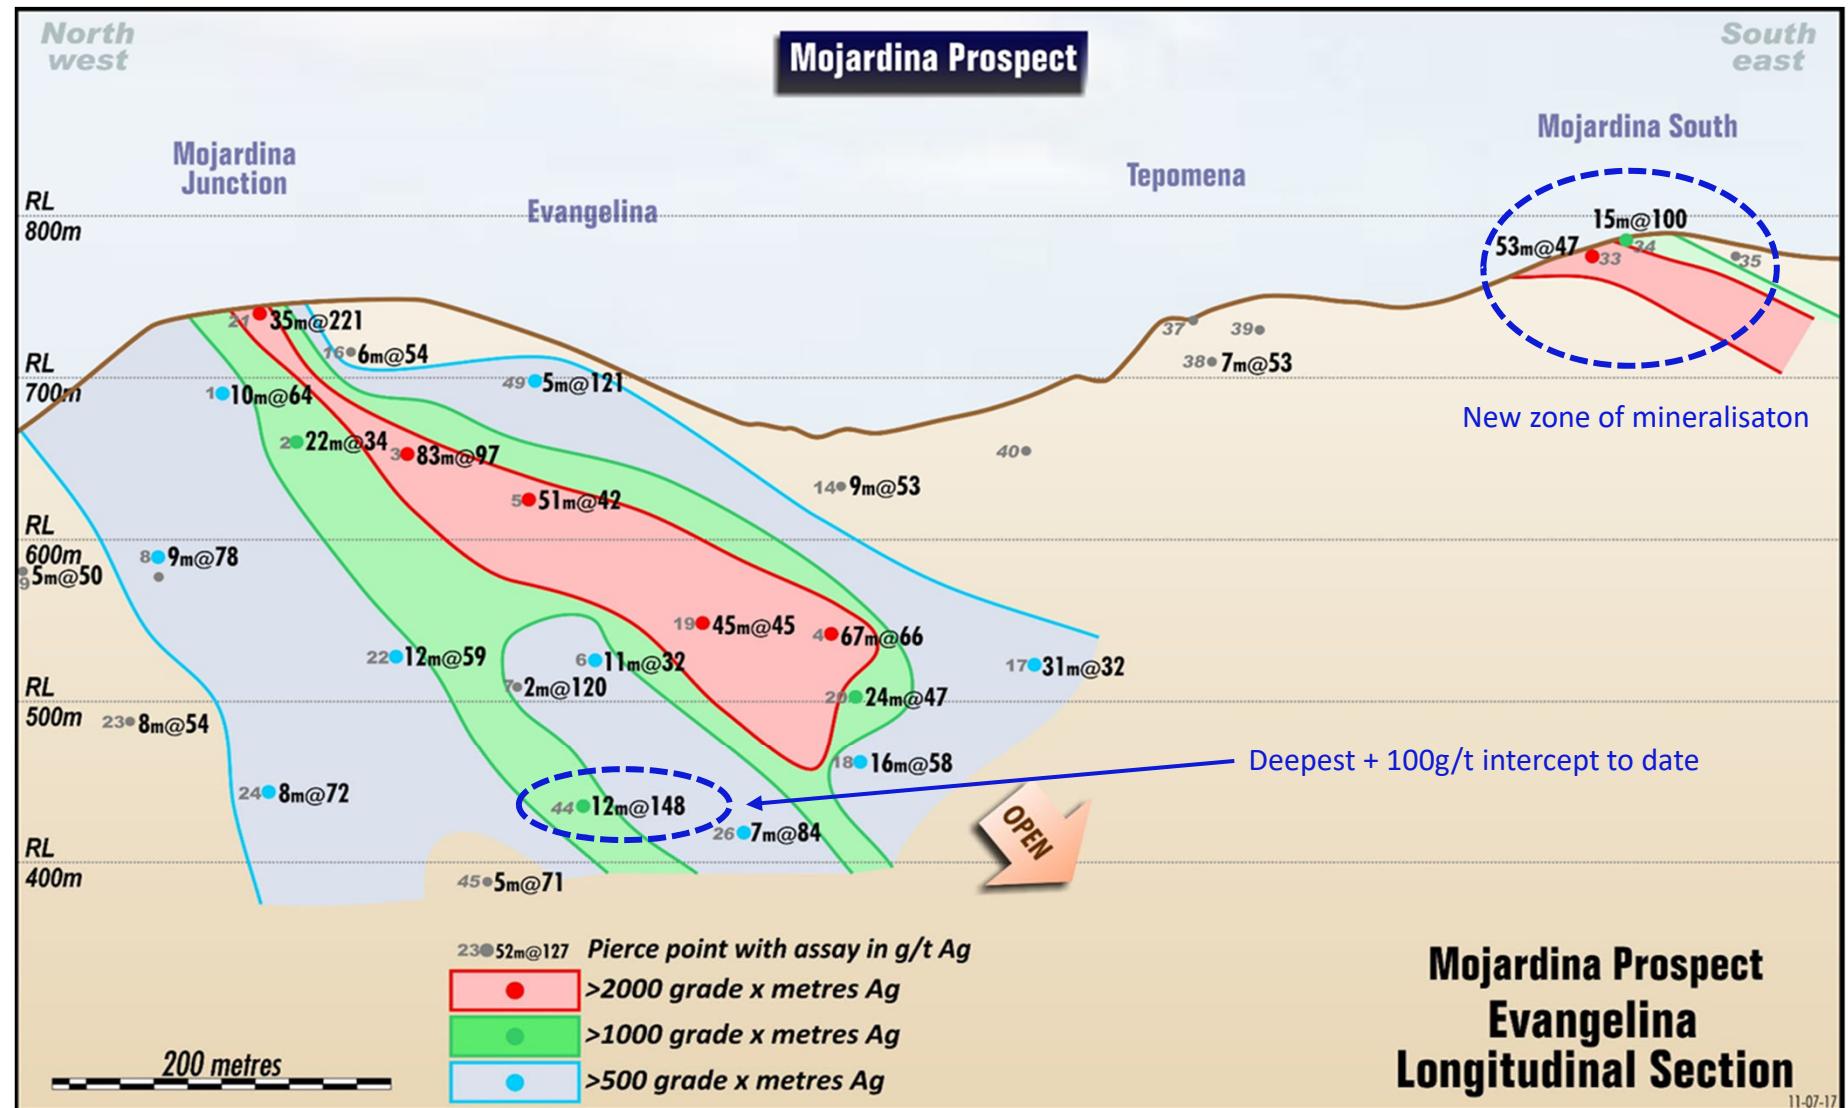

Conclusions:

- ◆ Mineralisation continues at depth across both the Las Animas and Evangelina vein systems
- ◆ Change in strike and increase in dip has also resulted in an open zone of >100 g/t Ag at depth and along strike.

Mexico Mojardina – Las Animas vein system

Mexico - Mojardina – Evangelina vein system

Mexico – Mojardina Preliminary Metallurgical Testwork

A preliminary test program was carried out on composite samples from 3 drill holes of the Mojardina Prospect

Hole	Interval (m)	Average Ag (g/t)	Sample Mass (Kg)
RC16CT-19 (Evangelina)	65-110	45	245
RC16CT-21 (Evangelina)	0-35	221	162
RC16CT-23 (Las Animas)	24-52	216	149

- ❖ Testwork resulted in very high silver recoveries using both direct leaching and rougher flotation tests, suggesting the ore is highly amenable to conventional processing methods for silver recovery.

Silver extraction by cyanide leaching

Sample	pH	Lime Consumption (Kg/t)	Cyanide Consumption (Kg/t)	Ag Extraction (%)
Hole 19	10.9	1.0	1.6	93.1
Hole 21	10.9	2.0	1.8	95.3
Hole 23	10.9	1.6	2.2	98.4

Rougher flotation results

Sample	% weight to concentrate	Concentrate grade Ag (g/t)	Ag Recovery to concentrate (%)	Comment
Hole 23	28.9	649	93.6	32 % Solids
Hole 23	16.1	1,170	88.2	22% Solids
Hole 23	8.8	2,229	86.8	32% Solids & 500g/t Sodium Silicate

- ❖ The recovery of Ag by either a direct cyanidation route or by leaching a flotation concentrate remain viable alternatives. Additional test work to further refine flotation performance is planned.

La Plata - Drill ready

La Plata is a highly mineralised zone sitting 2km to the north of Jesus Maria

March Qtr 2017

- ◆ Rock chip results up to 1,355 g/t Ag followed by diamond saw trenching identified the following significant results.

- LPTTR_07 2m @ 78 g/t Ag
- LPTTR_19 1m @ 1,995 g/t Ag
- LPTTR_23 5m @ 242 g/t Ag
- LPTTR_25 7m @ 131 g/t Ag,
including 3m @ 278 g/t Ag

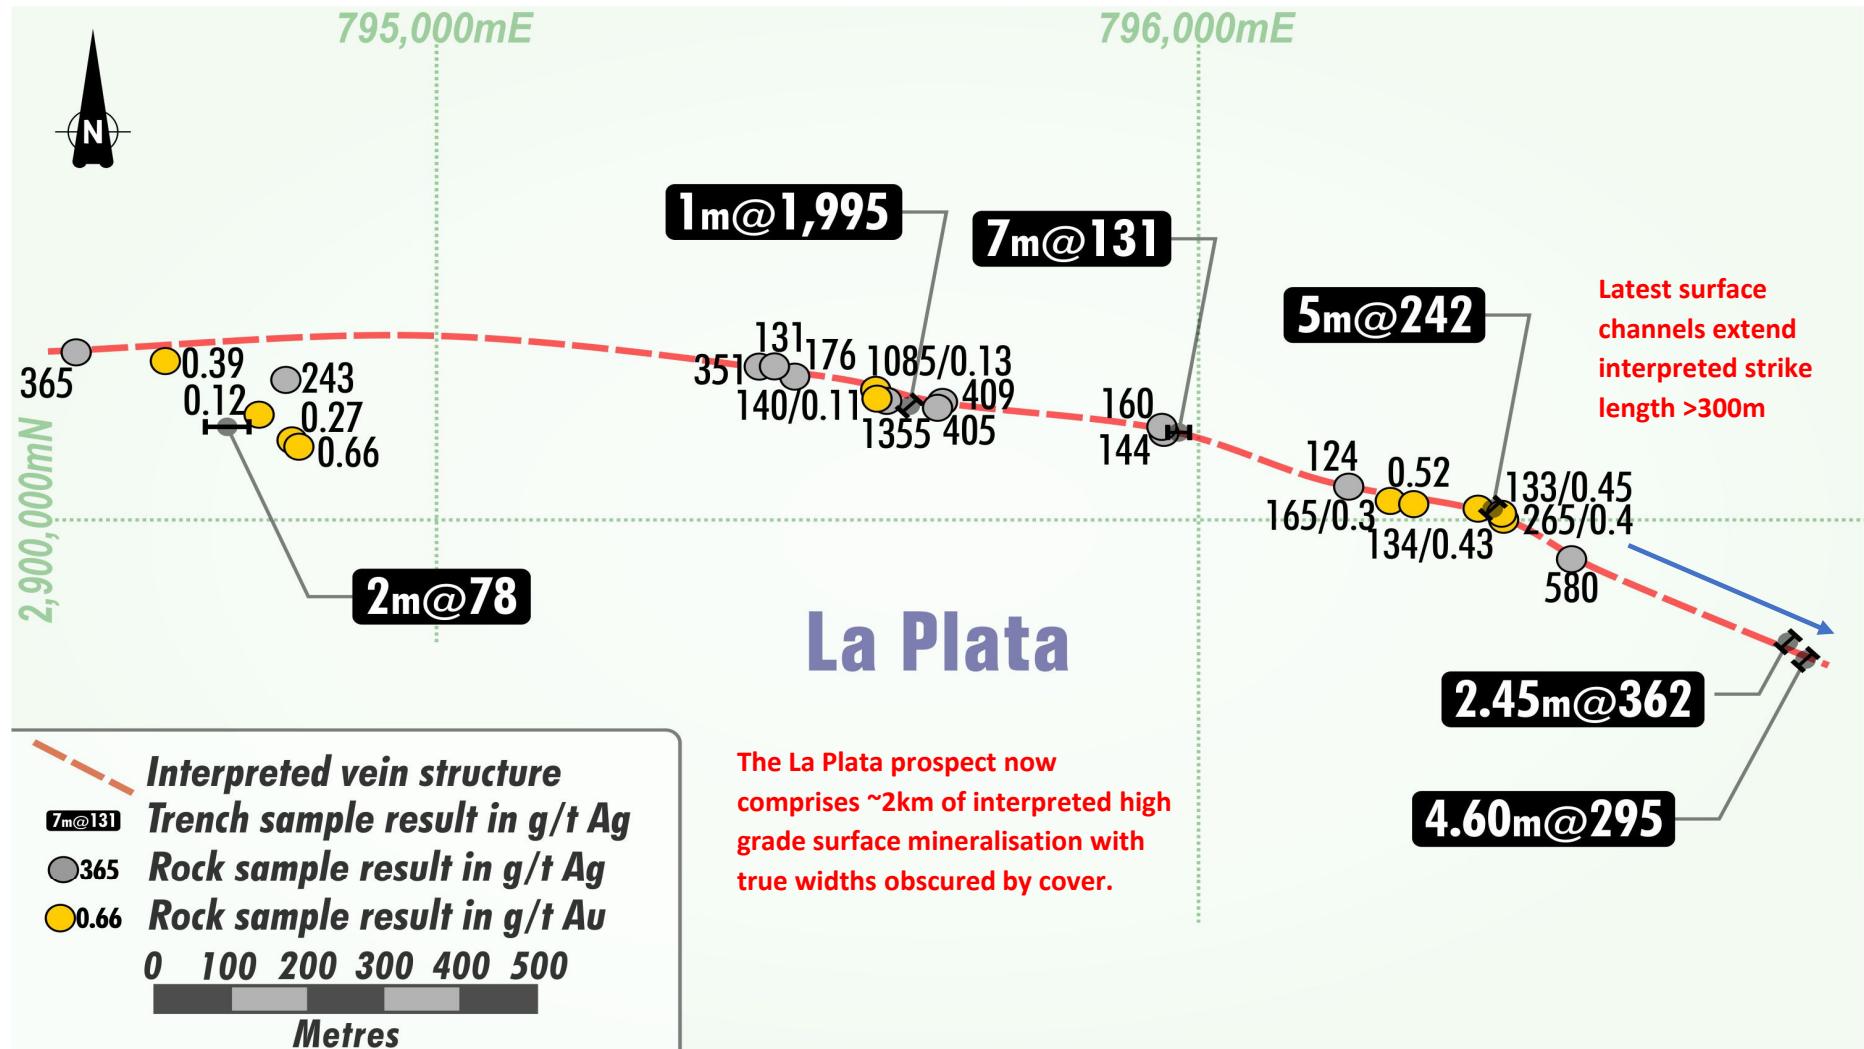

July 2017

- ◆ Diamond saw channel results represent a continuity of high grade surface mineralisation some 300m east of previously reported results:

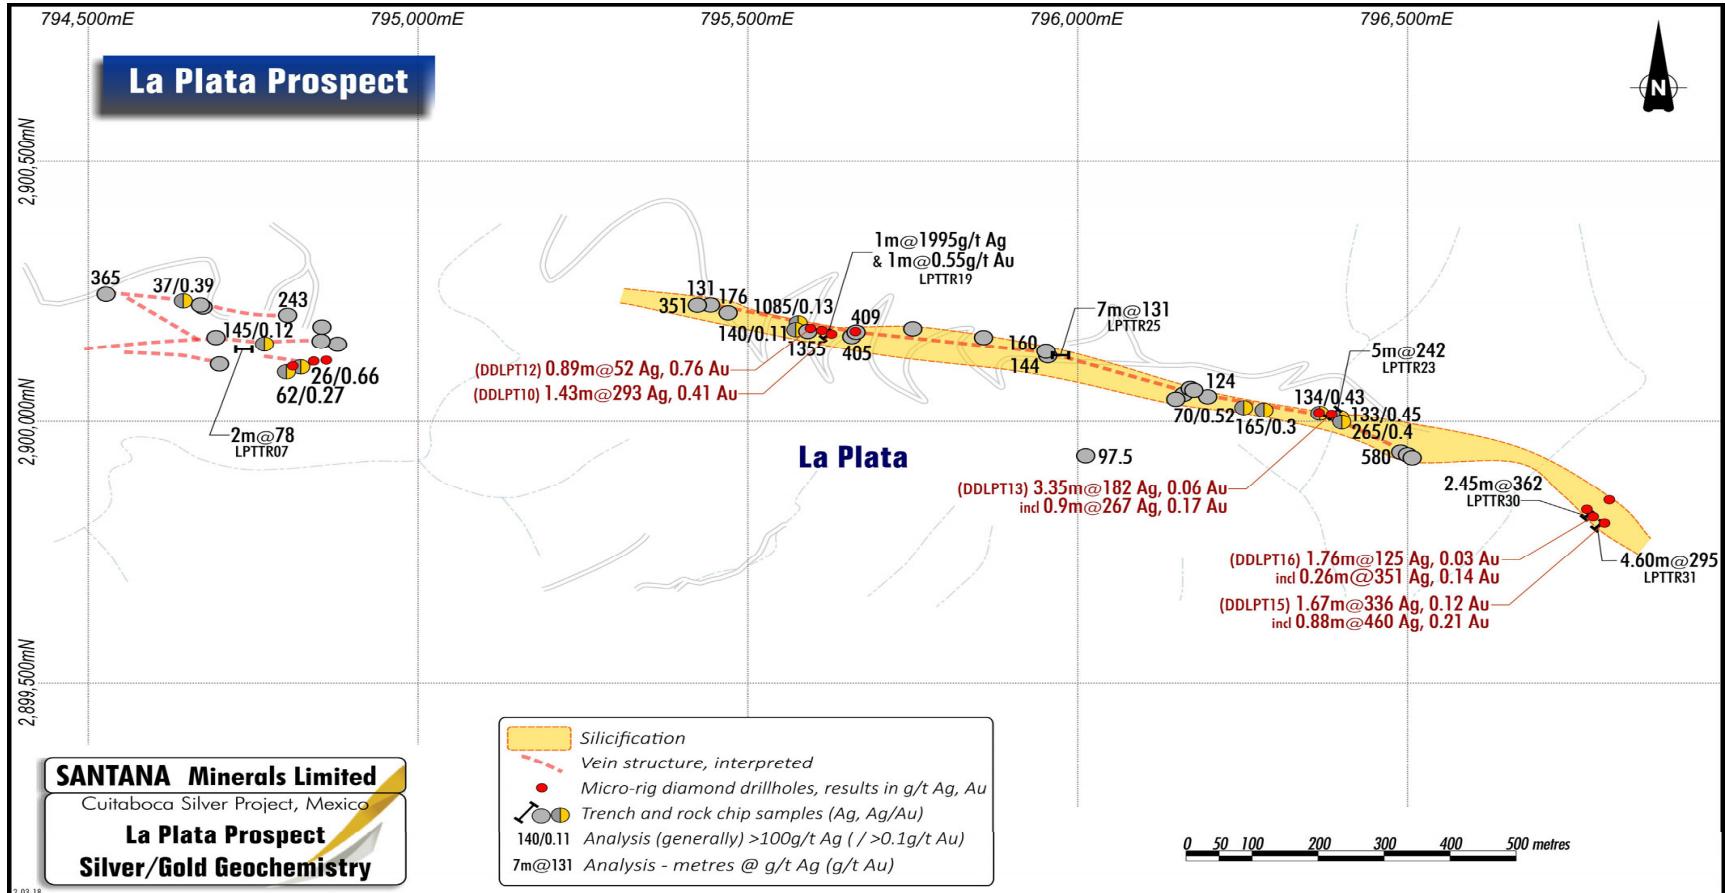

- **LPTTR-30 2.45m @ 362g/t Ag including:**
1.00m @ 158g/t Ag
0.85m @ 603g/t Ag
0.60m @ 362g/t Ag
- **LPTTR-31 4.60m @ 295g/t Ag including:**
1.00m @ 450 g/t Ag
1.00m @ 322 g/t Ag
1.00m @ 306 g/t Ag
0.90m @ 188 g/t Ag
0.70m @ 160 g/t Ag

Surface channel widths along the interpreted strike length have been limited to accessible outcropping

La Plata - 2km of high grade surface mineralisation

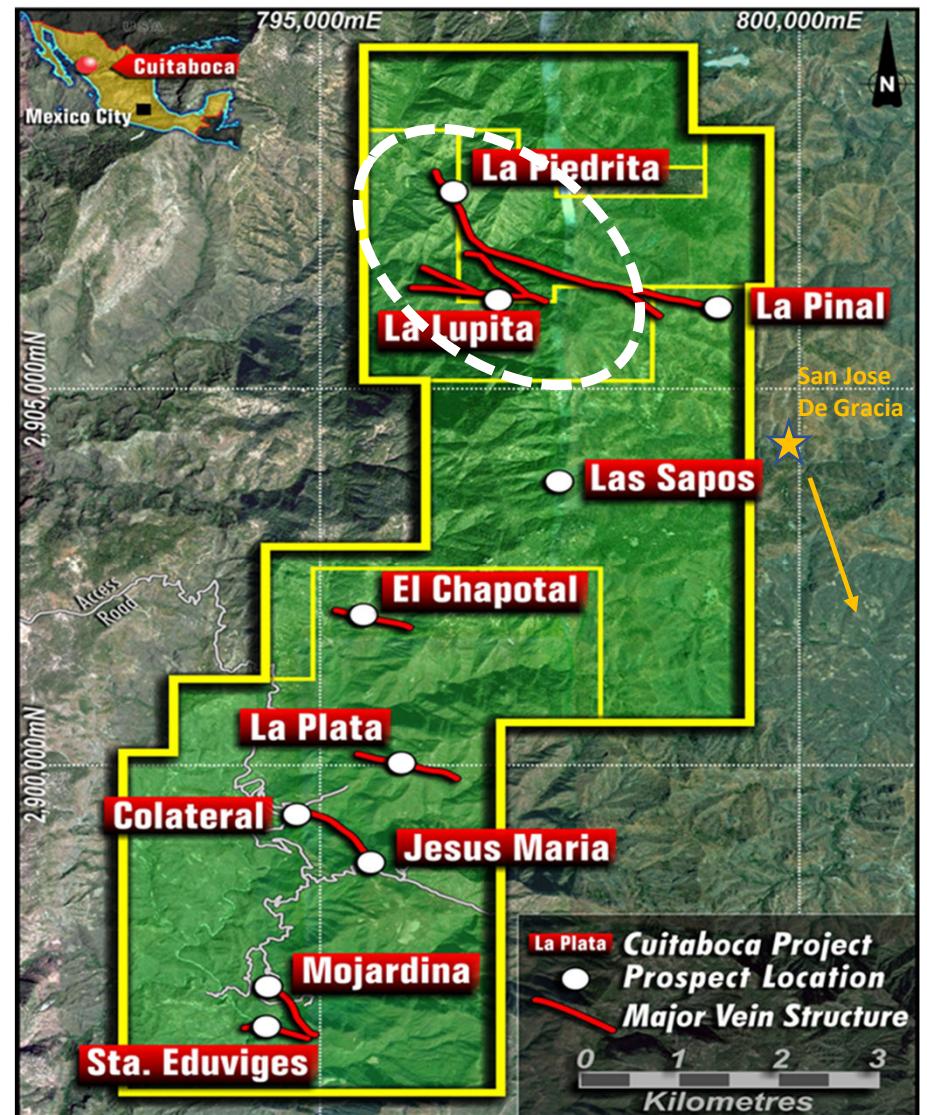

La Plata – Micro-rig Drilling

- Micro-rig drilling confirmed the potential of La Plata as a high grade target
- Drilling only down 10m-15m
- RC program needed but would require substantial excavation work

Mexico - Cuitaboca – Northern Potential

- ◆ Primary Targets
 - La Lupita
 - La Piedrita
- ◆ Geological Occurrence
 - Located at higher elevations in geological sequence
 - Indications of epithermal gold mineralisation similar to San Jose De Gracia mine (15km SE)
 - Relatively less accessible than southern targets
- ◆ Previous works (surface work only)
 - Rock-chip sampling in the 1990s by Peñoles and later verified by Behre Dolbear
 - Diamond saw trenching program to test outcropping vein systems

Mexico - La Lupita – high grade surface results

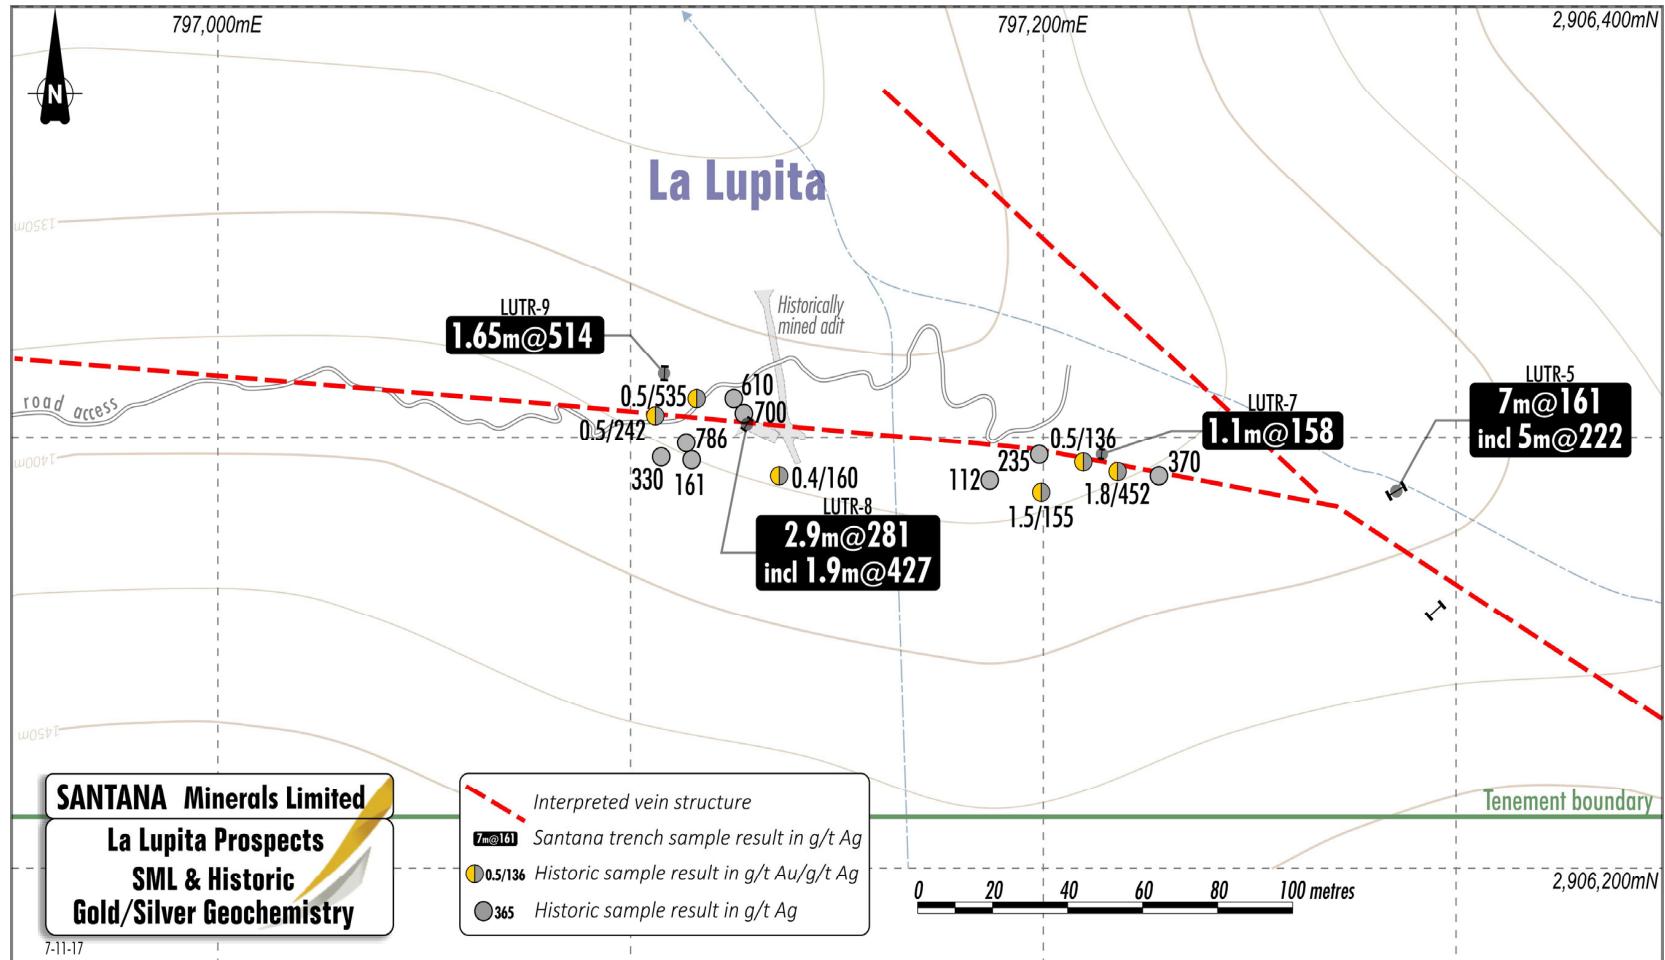

February 2017

- ◆ Significant Diamond sawn channels across the Lupita Prospect included:
 - 7m @ 161 g/t Ag, 0.66% Pb + 0.82% Zn including 5m @ 222 g/t Ag, 0.83% Pb + 1.4% Zn (LUTR_05)
 - 1.1m @ 158 g/t Ag, 2.3% Pb + 1.62% Zn (LUTR_07)
 - 2.9m @ 281 g/t Ag, 3.1% Pb + 3.0% Zn (LUTR_08)
 - 1.65m @ 514 g/t Ag, 6.8% Pb + 5.4% Zn (LUTR_09)
- ◆ Significant Diamond Sawn channels across the La Piedrita Prospect included:
 - 4.85m @ 135g/t Ag, 2.2% Pb +1.38% Zn
- ◆ Results highlight the prospective nature of the La Lupita structure and confirm the high grade nature of historical surface work undertaken by Peñoles in the 1990s

Peñoles sampling – 1990s

797212	2906286	24	0.85	-	45

Mexico - Interpreted La Lupita vein structure

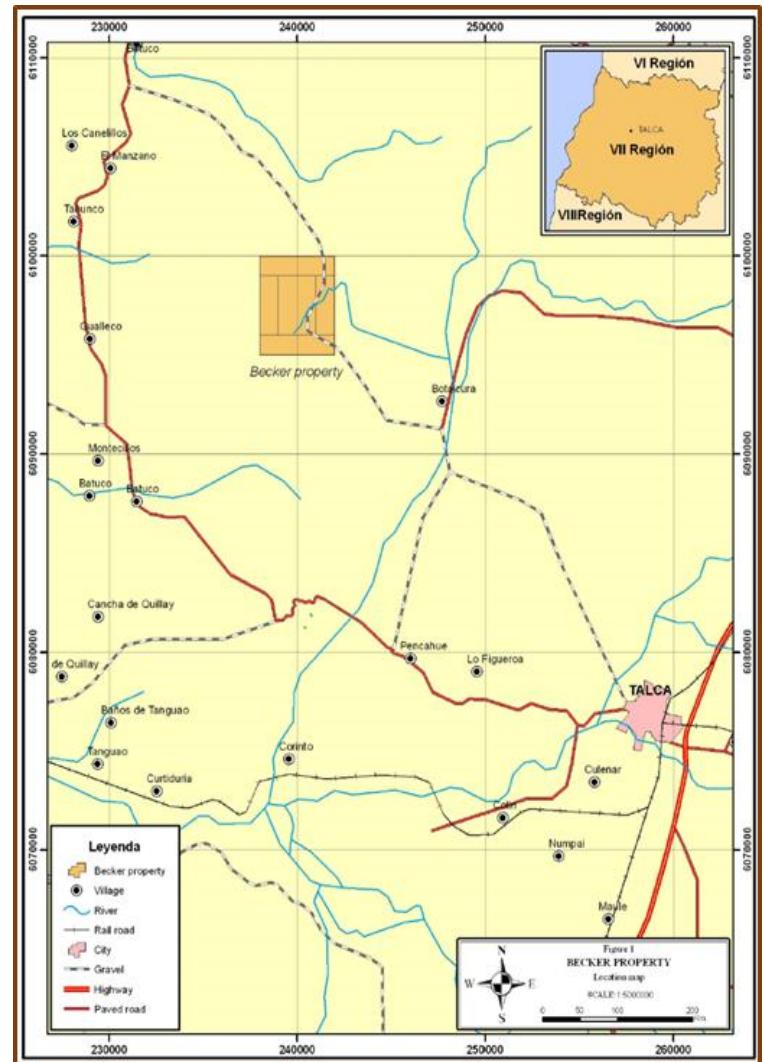

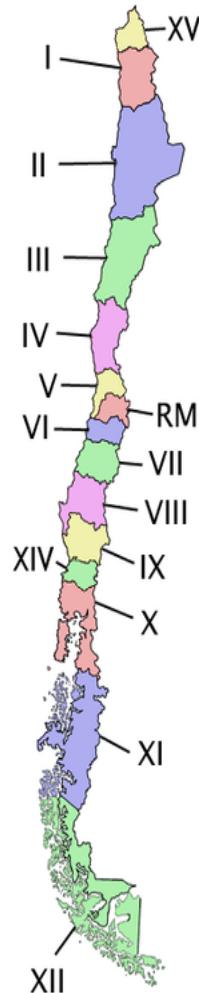

- ❖ Peñoles sampling of this vein yielded an average 0.3g/t Au and 220g/t Ag over an approximate strike length of 130m.
- ❖ Behre Dolbear's report also suggests a series of parallel vein structures to the one sampled and is suggestive of a much thicker mineralised zone.

Mexico - La Lupita – one of numerous northern targets

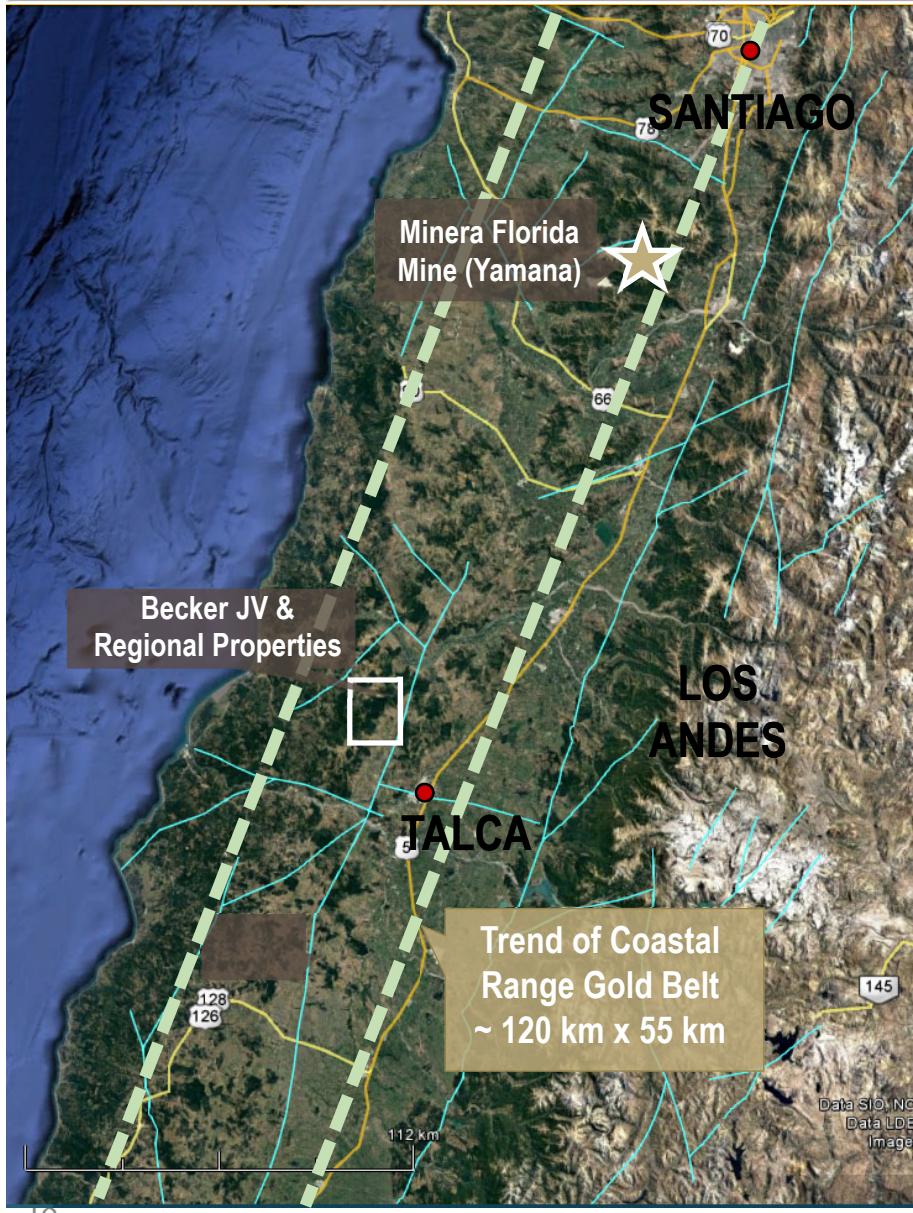

Becker Project - Chile

- 2,000ha exploitation licences (600ha granted + 1,400ha application).
- Located 210 km south of Santiago and 40km northwest of Talca, Region VII Chile.
- Intermediate to low sulphidation epithermal-mesothermal Au-Ag polymetallic mineralisation.
- Exploration (1995) discovered N-S trending 300m x 900m zone of quartz boulders up to 4m in diameter.
- Previous trenching identified several individual quartz veins up to 350m in length and widths from 0.5 to 7.5m.
- **Previous sampling returned high grade assays of 23.5, 37.2, 40.7, 63.5, 70.0 and 79.0 g/t Au.**
- CLL trenching across veins returned up to 4.0 metres at 30.7 g.t Au and 6 g/t Ag.
- **Maiden drill program undertaken: 10 holes at Lajuelas Prospect + 5 holes at Guindos Prospect**

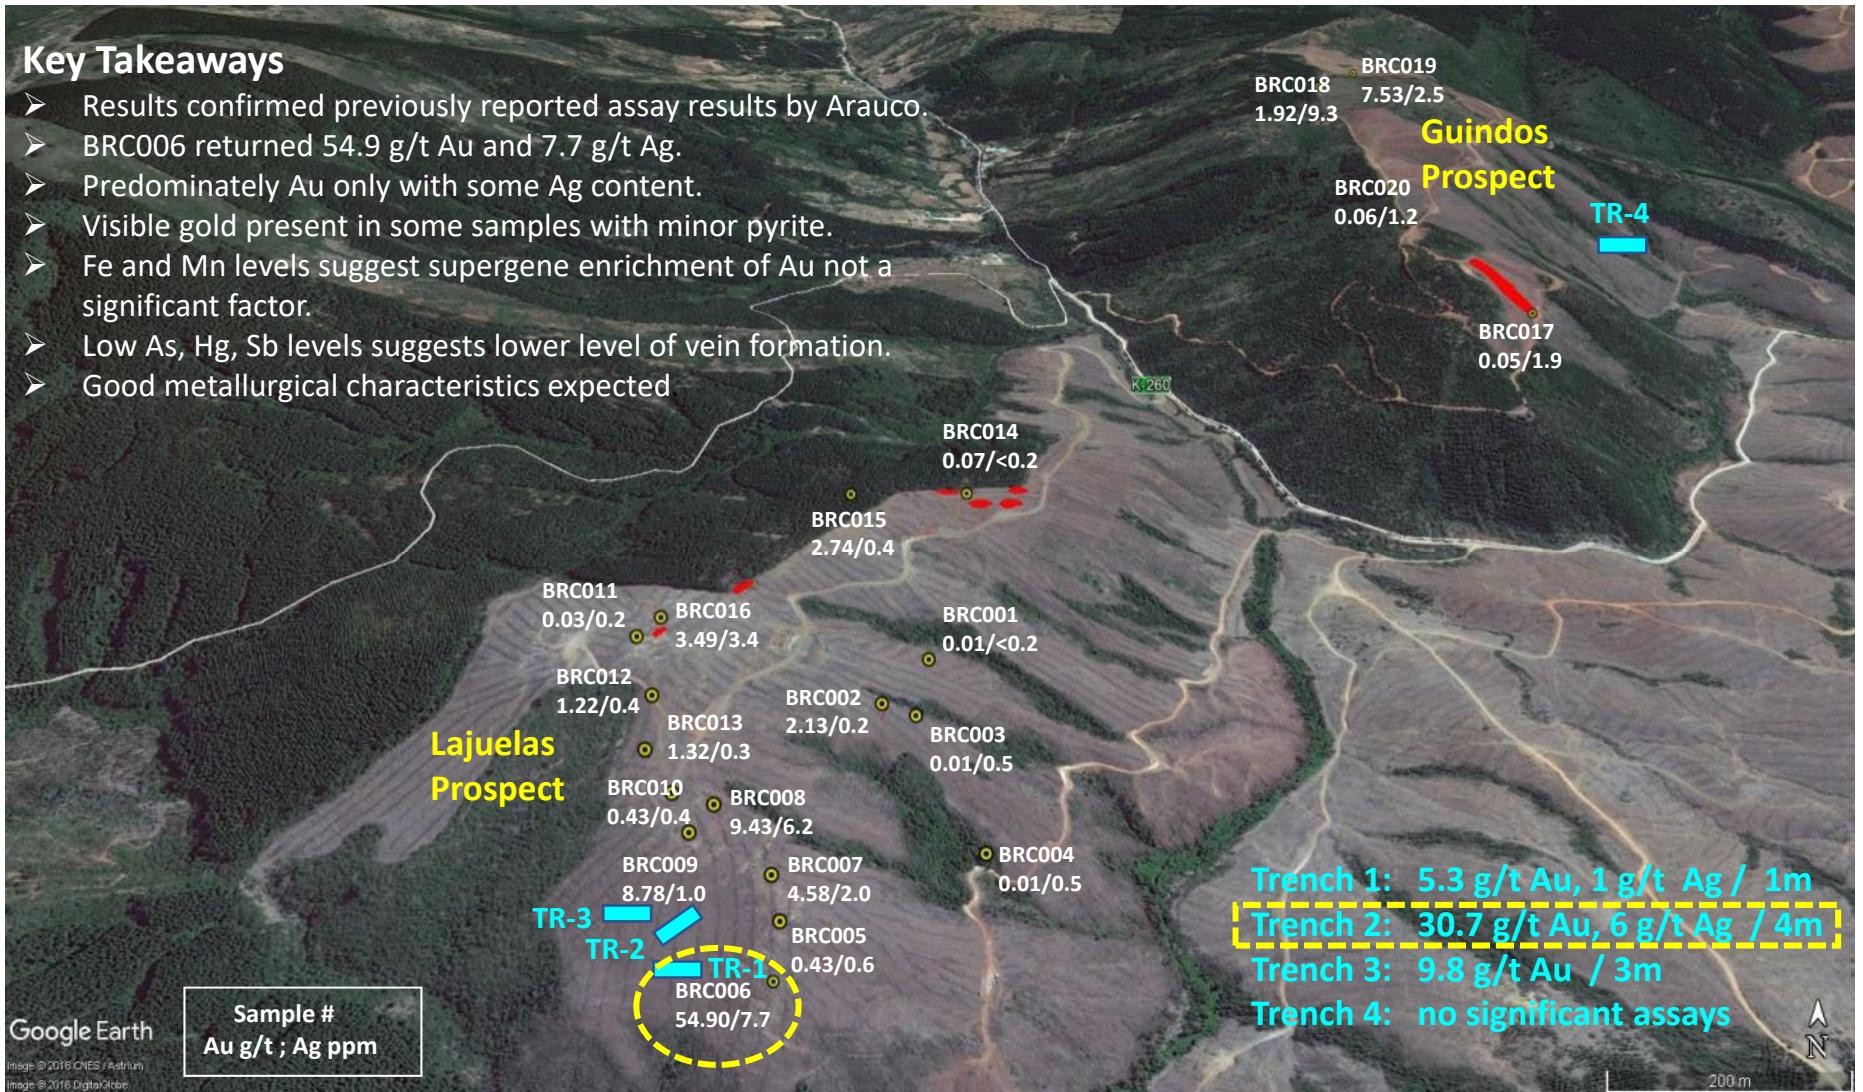

Project Location - Chile

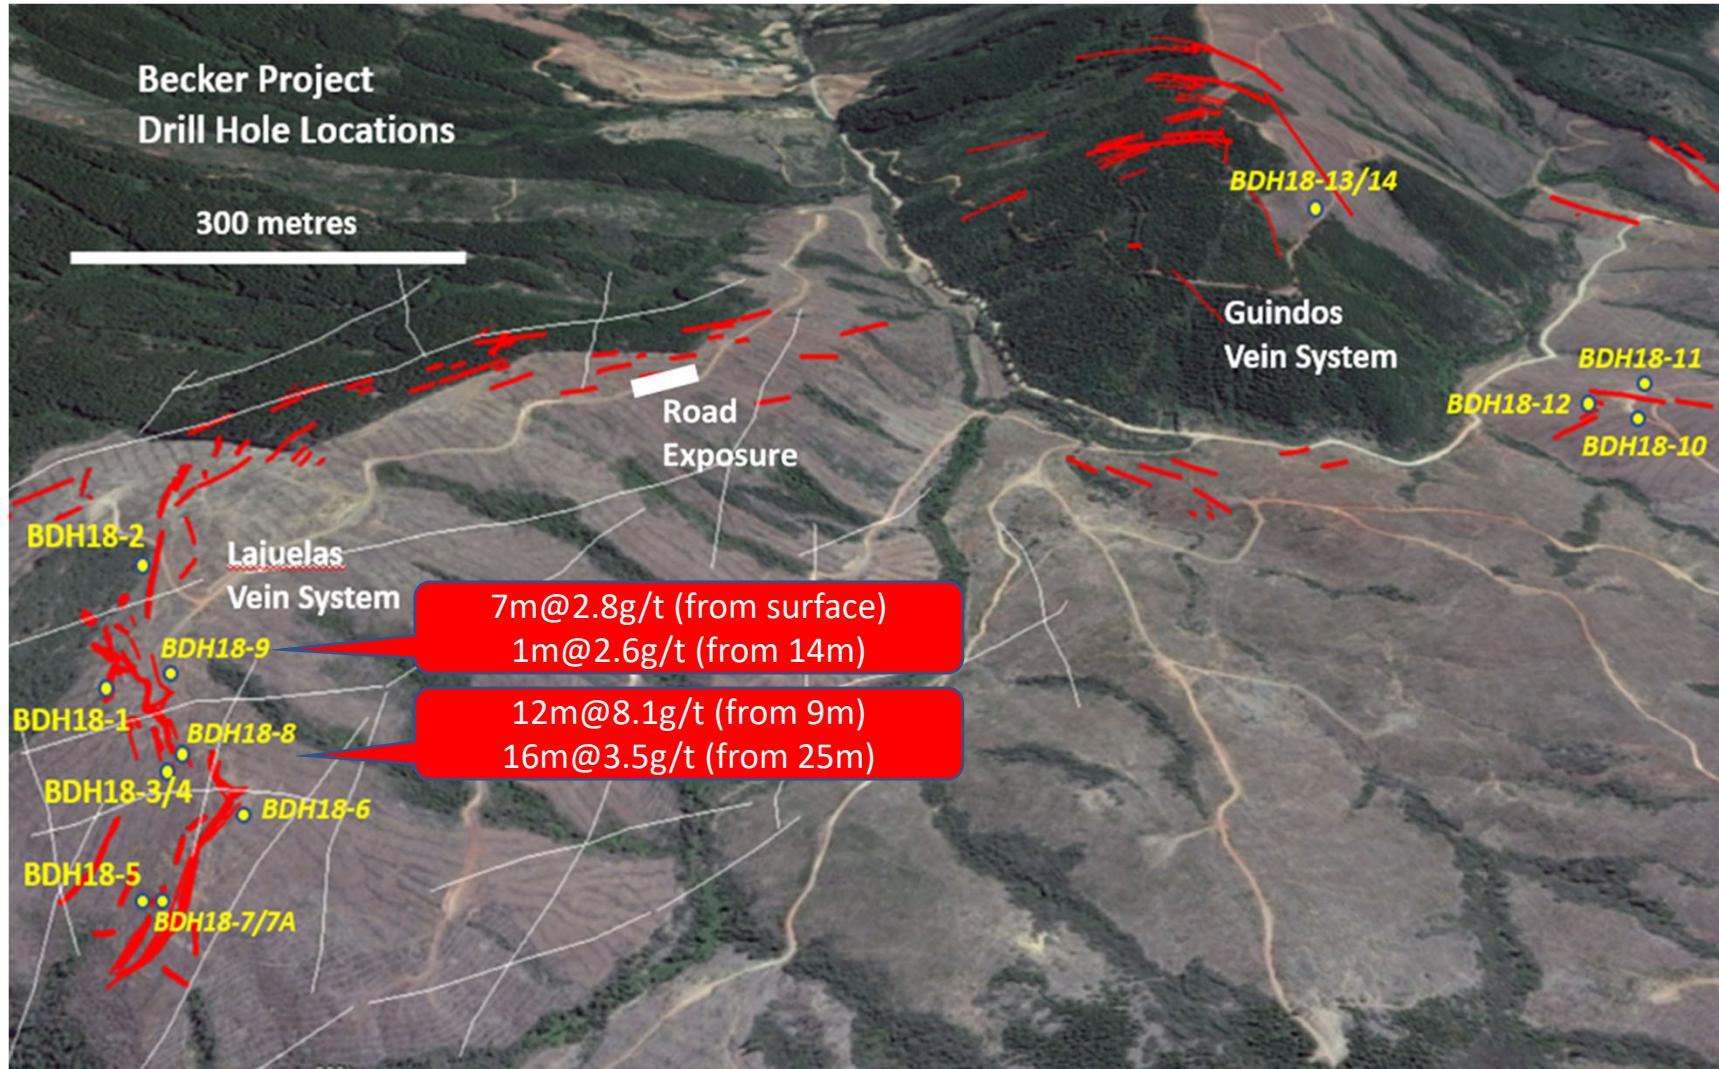

- Becker JV and regional properties – 150km southwest of Yamana's Minera Florida Mine or 210 km southwest of Santiago
- Road access to all properties and able to work year round.
- All properties occur within Belt of Mesozoic-aged intrusive, volcanic & sedimentary rocks which host Minera Florida and smaller past-producing mines (Las Palmas, Chepica, El Chivato) in the Talca area.
- Previous and current exploration confirm presence of Au-Ag mineralized quartz veins within all properties
- Previously no detailed exploration, geophysics or drilling.

Becker - 2016/2017 sample & trenching results - Chile

Becker – 2018 Drilling - Chile

Drill location plan: Lajuelas (holes 1-9 incl 7 and 7A) and Guindos prospect (holes 10-14)

Becker – 2018 drilling and sampling

Lajuelas Drilling 2018
