

WINCHESTER
ENERGY LIMITED

ACN 168 586 445

ASX: WEL

QUARTERLY REPORT

For the period ended 31 December 2018

Winchester Energy field production & operations area, Permian Basin, Nolan County, West Texas

HIGHLIGHTS

Total revenue was US\$227,347. Total oil revenue was US\$218,641 and total gas sales revenue was US\$8,706. The average sale price per barrel of oil was US\$54.00.

Gross Oil Production (bo)	December Quarter 2018	September Quarter 2018	June Quarter 2018	March Quarter 2018	December Quarter 2017
Oil Production (Gross 100%WI)	10,726	11,346	12,660	15,277	17,164
Oil Sales (Gross 100%WI)	12,500	10,279	14,210	15,049	18,022

Note: These figures show gross oil production only (they exclude gas sales). Winchester is entitled to its Working Interest share of net proceeds after royalty payments to the oil and gas mineral rights owners.

Three Exciting Drill Prospects Identified – Gross Prospective Resources of 7.8mbo

- The El Dorado, Mustang and Spitfire prospects, all occurring within the Company's 17,266¹ acre leasehold position, have been identified through 3D seismic and well control as compelling drill targets. Drilling to commence upon completion of the current entitlement offer.
- Gross Prospective Resources for the three prospects have been estimated on a probabilistic basis by independent petroleum consultants. **The aggregate gross Prospective Resource is 7.796 million barrels of oil²**, if oil and productive reservoir targets are present in these prospects.

Drilling/Completion Testing Currently Underway

- White Hat 39#1L has undergone a full formation build-up test which indicates that a hydraulic fracture programme may assist in increasing the oil production rate. This work will commence upon completion of the current entitlement offer.
- US Energy Corporation of America (USEC) has re-entered Thomas 119-1H and plans to frack the Lower Penn Shale of the Wolfcamp 'D' Formation. Winchester is currently awaiting advice from USEC as to when this work will commence.
- Success at Thomas 119-1H will potentially add significant value to Winchester's acreage as the Wolfcamp 'D', in particular the Lower Penn organic-rich shales, extend across much of Winchester's acreage.

¹ The Company's net acreage position varies modestly in accordance with earned interests in drilling units of the current operations. The current net interest is 17,266 acres following CEGX's revised position in White Hat 39#1. Note the Company's announcement of 25 January 2019 advising that it is currently in the process of reviewing the status of the Arledge lease

² Refer to the announcement dated 15 October 2018

OIL PRODUCTION SUMMARY

Winchester recorded the following gross and net oil production for the quarter ended 31 December 2018 (across all oil wells in which Winchester has a working interest):

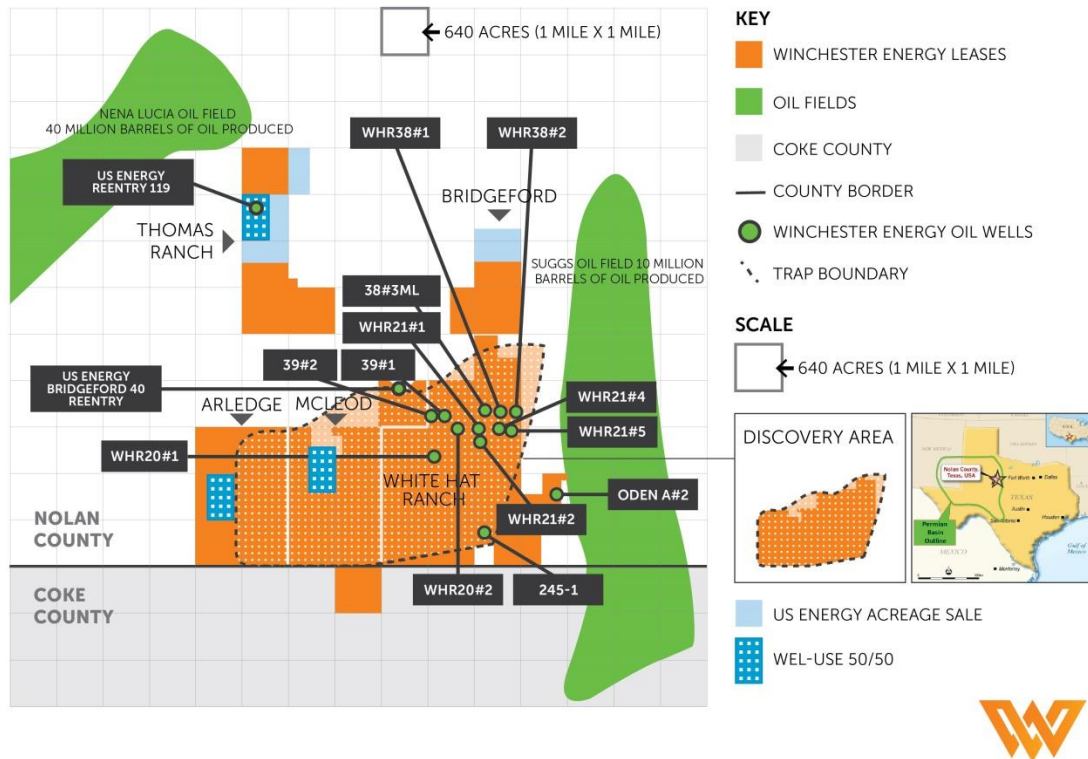

Gross Oil Production (bo)*	December Quarter 2018	September Quarter 2018	June Quarter 2018	March Quarter 2018	December Quarter 2017
Oil Production (Gross 100%WI)	10,726	11,346	12,660	15,277	17,164
Oil Sales (Gross 100%WI)	12,500	10,279	14,210	15,049	18,022
Net Oil Production to Winchester (bo) (50% Working Interest)*					
Quarterly Oil Production (Net)	5,249	5,503	6,346	7,658	8,582
Quarterly Oil Sales (Net)	5,679	5,098	6,969	7,561	9,011

* Please note that all oil and gas production is subject to royalty payments to the oil and gas rights owners. The figures represented above are for oil production only (and exclude gas sales) and are pre-royalty.

Location of the Company's acreage position in Nolan and Coke County, Texas, USA

To date, Winchester's wells in Nolan County have produced a total gross 318,918 barrels of oil and 174 million cubic feet of gas with cumulative net production to Winchester before royalties of 159,459 barrels of oil and 87 million cubic feet of gas.

OPERATIONS SUMMARY

During the quarter ending 31 December 2018 the Company generated multiple exciting drilling prospects with Gross Prospective Resources within its oil and gas leases located in the eastern shelf of the Permian Basin in central west Texas, USA.

The Eastern Shelf has multiple, stacked reservoirs and Winchester has high confidence that the Eastern Shelf of the Permian Basin and in particular its leased acreage in Nolan County has significant oil resource potential across a host of historically producing formations such as the Ellenburger, the Fry/Strawn Sands as well as the thick Penn Carbonate and Shale, Wolfcamp 'D' organic shales, Crystal Falls (Canyon) and Cisco formations. These are located between 4,000 – 7,500 feet and can be targeted with modest drilling and completion cost, supported by existing infrastructure.

Exciting Drill Targets with Gross Prospective Resources

Within the lease position there are several intervals with development potential. This has become particularly significant given the production rate observed from the Strawn Formation in the White Hat 20#2 well (initial production of 200 bopd – 39,000 bo recovered to date).

As well as the Strawn Formation, other prospective units include the Wolfcamp 'D' high total organic carbon shale intervals, Three Fingers Shale, Lower Penn Shale and several intervals within the Canyon Sands package.

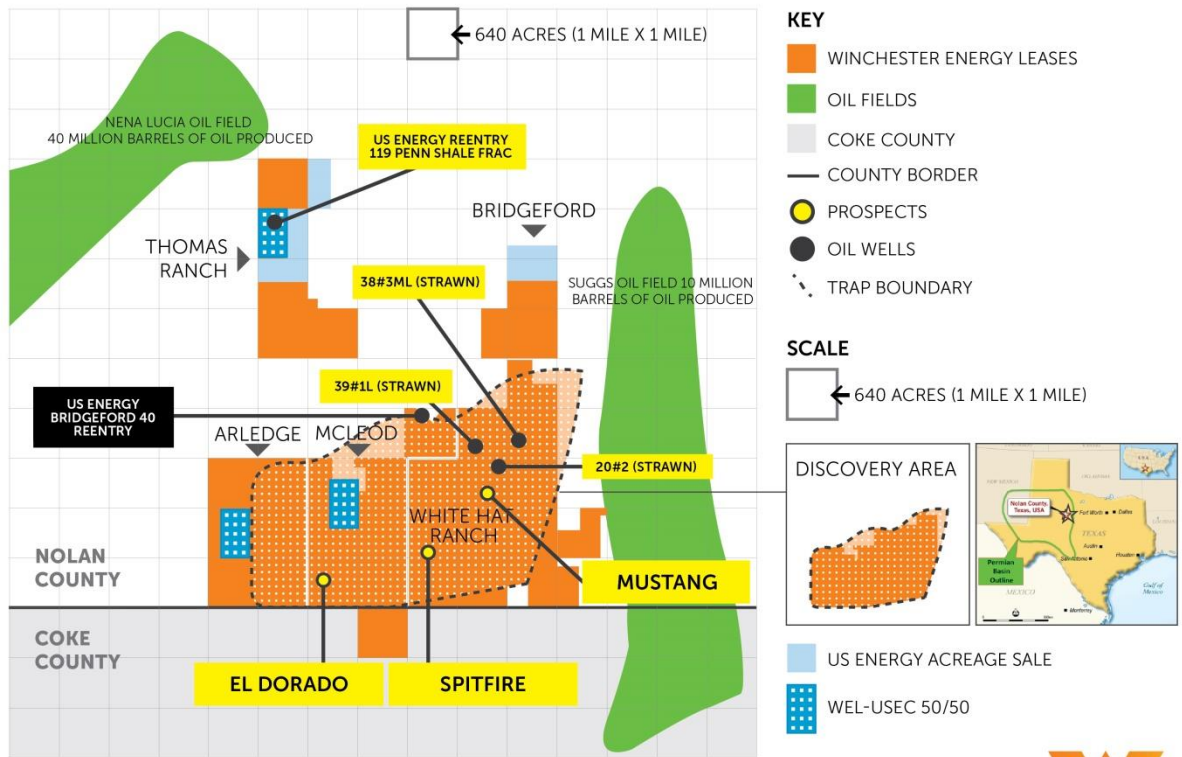

Winchester has identified, from both 3D seismic and well control, the El Dorado, Mustang and Spitfire prospects. It is anticipated that these prospects will be drilled immediately following the conclusion of the current rights entitlement offer.

The gross Prospective Resources estimates for these three prospects have been estimated probabilistically on an un-risked Best Estimates basis by independent U.S. based petroleum consultants, Mire & Associates, Inc. The cumulative gross prospective resource for these three prospects on a probabilistic basis is 7.796 million barrels*, if oil and productive reservoir targets are present in these prospects.

Prospect	Low Estimate	Best Estimate	High Estimate
	(mill bbls)* P90	(mill bbls)* P50	(mill bbls)* P10
El Dorado	0.591	1.269	2.628
Mustang	0.799	2.037	5.007
Spitfire	1.994	4.490	9.907
Total - All Prospects	3.384	7.796	17.542
Total Net to WEL**	2.122	4.870	10.912

* - Cautionary Statement - The estimated quantities of petroleum that may potentially be recovered by the application of a future development project(s) relate to undiscovered accumulations. These estimates have both an associated risk of discovery and a risk of development. Further exploration appraisal and evaluation is required to determine the existence of a significant quantity of potentially moveable hydrocarbons. See announcement dated 15 October 2018 for further detail.

** - Total Net to WEL is its current Entitlement Share (79%), net of applicable lease royalties and equates to average 62% of the Total Gross Prospective Resource as WEL's working interest is 75% in the Mustang and Spitfire prospects and 100% working interest in the El Dorado prospect. WEL's future entitlement share may be subject to reduction in the event of farmout in the future, should any farmout occur.

Mustang Prospect - Winchester Energy 75% Working Interest (WI)

The Mustang prospect is a stratigraphic trap interpreted from 3D seismic and well control data. The prospect is composed of a series of Strawn sand lobes deposited in a linear trend in front of the regional high (to the east).

Within the prospect and 0.5 miles to the north east of the proposed well location, the White Hat 20#2 well produces oil from the Strawn sand with an initial production rate of 200 barrels of oil per day (bopd). The 3D seismic interpretation provides confidence that the presence of the oil producing sand seen in White Hat 20#2 is present in the Mustang Prospect. Mire and Associates recently increased the estimated ultimate recovery (EUR) from the White Hat 20#2 to 112,000 barrels of oil.

Multiple horizons are prospective including the Strawn sandstones and carbonates, the Wolfcamp 'D' shales and carbonates and the Ellenburger carbonates.

For the purpose of this report, only the Strawn sand and Ellenburger carbonates are being considered in the determination of the Prospective Resources for the Mustang Prospect. The potential gross recoverable oil resource classified as Prospective Resources have been

estimated probabilistically on an un-risked basis with a range from low (P90), best estimate (P50), high (P10) and mean basis.

Given the control over the Mustang Prospect provided by the 3D seismic and adjacent wells with oil shows and a producing well in the primary target zone (White Hat 20#2), the estimated probability of success for both targets is 58%³.

Spitfire Prospect - Winchester Energy 75% Working Interest (WI)

This prospect is interpreted from the 3D seismic following seismic inversion processing as a series of lobes of potential reservoir sediments with intra-formation seals lying within a topographic low as thick valley fill. Well control adjacent to the interpreted Strawn valley fill is provided by an immediately adjacent well on the edge of the seismically interpreted valley fill.

Oil shows are present in this 'edge' well to the interpreted valley fill in the Strawn sands and carbonates, the primary target within the Spitfire Prospect. Reservoir risk and intra-formational seal risk within the valley fill are determined to be the main risks for the Spitfire Prospect containing an oil productive formation.

Multiple horizons are prospective including the Strawn sandstones and carbonates, the Wolfcamp 'D' shales and carbonates and the Ellenburger carbonate.

For the purpose of this report, only the Strawn Formation and Ellenburger carbonates are being considered in the determination of the gross Prospective Resources for the Spitfire Prospect. The potential recoverable oil resource classified as Prospective Resources have been estimated probabilistically on an un-risked basis with a range from low (P90), best estimate (P50), high (P10) and mean basis. Given the control over the Spitfire Prospect provided by the 3D seismic and adjacent wells with oil shows surrounding the prospect and the reservoir and seal risk, the estimated probability of success for both targets is 28%³.

El Dorado Prospect - Winchester Energy 100% Working Interest (WI)

The El Dorado prospect is a large four-way closed structure. The closure has been mapped at multiple levels.

Multiple horizons are prospective including the Wolfcamp 'D' shales and carbonates, the Penn Carbonate, the Strawn sandstones and carbonates and the Ellenburger carbonates with closure present over 3,000 feet of vertical section.

³ Estimated probability of success in finding oil is based on Winchester's analysis of the risk relating to presence of: Trap X Reservoir X Seal X Charge.

The company has used a vast number of wells in Nolan County in the vicinity and within the Company's acreage to determine recovery factors, 3D seismic mapping to calculate the trapping area and well logs to determine the prospective reservoir thickness. The recoverable barrels per acre-ft for the prospects are based on the adjacent Suggs Oil Field and White Hat Ranch Field producing well data.

For the purpose of this report only the Ellenburger carbonates and the Strawn formation are being considered in the determination of the prospective resources. The gross potential recoverable oil resource classified as Prospective Resources have been estimated probabilistically on an un-risked basis with a range from low (P90), best estimate (P50), high (P10) and mean basis. Given the control over the prospect provided by the 3D seismic and adjacent wells surrounding the prospect with oil shows, the estimated probability of success for both targets is 48%⁴.

White Hat 39#1L (40.6% WEL Working Interest After Payout)

Winchester has previously reported that after simple perforation and acidisation the White Hat 39#1L well produced 1,000 barrels of oil from the **Strawn Formation** over 10 producing days of swabbing and pumping. The well was perforated across a 20 feet section of the Strawn Formation and, following initial swab rates of 200 bopd, was put on pump to assess production.

As expected, the total fluid rate then diminished to 40-50 bopd as the acidized area surrounding the well bore was produced. This rate of production is regarded as significant for an un-fracked Strawn well.

A full formation build-up test was completed in November 2018 to assess the reservoir pressure and determine potential near wellbore damage, areal extent, potential formation barriers as well as any potential depletion. After almost a month of shut-in, White Hat 39#1L was opened and initially produced 30 bopd before declining gradually to its current flow rate of approximately 11 bopd.

The well produced 103 barrels of oil and 83 barrels of water in 8 days in January and was subsequently shut back in. The casing pressure has increased from 20 psi to 102 psi in 7 days.

Data collected during the full formation build-up pressure test suggests that a hydraulic fracture programme may assist in increasing the oil production rate from the White Hat 39#1L well. Winchester is now reviewing the pressure build-up data and evaluating various fracture

⁴ Estimated probability of success in finding oil is based on Winchester's analysis of the risk relating to presence of: Trap X Reservoir X Seal X Charge.

stimulation options and models while awaiting confirmation from the hydraulic fracturing crew as to when the work can be undertaken.

Winchester currently derives production from the Strawn interval in the White Hat 20#2 well. The White Hat 20#2 well was fracture stimulated, with an initial production rate of 200 bopd and continues after 20 months of production to be an excellent producer at an average of 40 bopd in the month of December 2018 - producing over 39,000 barrels of oil to date. The revised estimated ultimate recovery (EUR) for the well is 112,000 barrels.

Carl E Gungoll Exploration LLC (CEGX) has farmed-in to White Hat 39#1L. Winchester has a 31.5% interest before payout retaining a 40.6% working interest (WI) after payout through the program (GEGX 50% WI, USR Energy, LLC 5% WI and a syndicate of technical consultants familiar with the area a 4.4% WI).

The results of the planned fracture program of the Strawn Formation in White Hat 39#1L is important for Winchester given the Strawn Formation is the largest producing stratigraphic interval in Nolan and Coke Counties with over 65 million barrels of oil produced. Winchester's leasehold is situated in Nolan and Coke Counties.

The importance of the Strawn Formation as a significant exploration and development target within Winchester's leasehold is demonstrated by successful industry activity 18 miles to the northwest of Winchester's leasehold. Recent horizontal drilling and multi stage fracture programs in the Hermleigh Field have produced initial flow rates of up to 1,461 barrels of oil per day from the Strawn.

In addition to the White Hat 39#1 testing, Winchester recovered 20 bopd in the vertical section of White Hat 38#3ML after perforating the Strawn prior to being shut in. The well was recently opened up and produced 88 barrels of oil over 4 days before being shut back in. White Hat 38#3ML has been identified as a potential slick water stimulation (targeting the Strawn) candidate similar to the fracture stimulations being used in the successful Scurry County Strawn completions.

Thomas 119-1H (WEL Working Interest – 12.5% Back-in Right)

In November 2018, Winchester was informed by US Energy Corporation of America (USEC) that due to sub-optimal down-hole conditions, USEC have abandoned plans to pump test the Odom Lime Formation and are now moving up the vertical well bore with the plan to hydraulic fracture the Lower Penn Shale of the Wolfcamp 'D' Formation.

USEC have a workover rig on location and are awaiting the availability of a frack crew for the Thomas 119-1H well. Further updates on the activities in these two wells will be made as information is made available by USEC.

Wolfcamp "D" / Penn Shales

Winchester Energy LTD

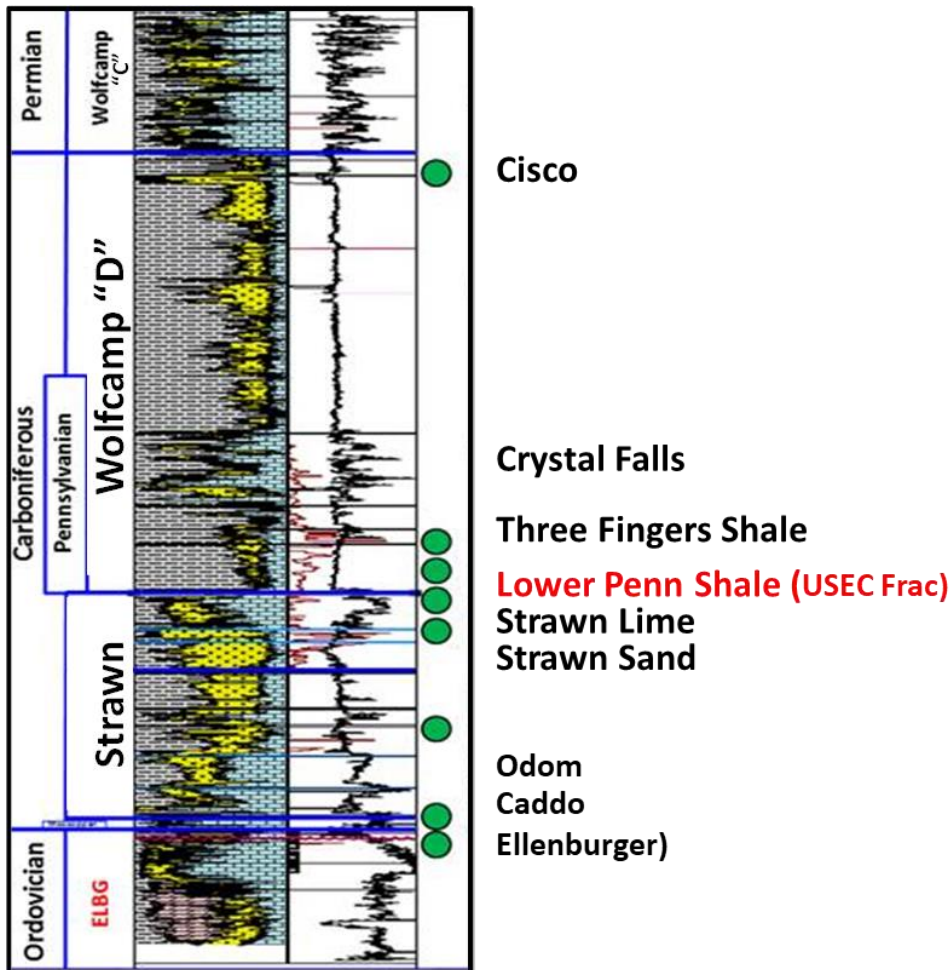

The area covers
175 x 75 km
13,000 Sq. Km
5000 sq miles
3 million acres

The Wolfcamp 'D' shale, also known as the Lower Wolfcamp and Cline Formation, is the lowest unit of the Wolfcamp sequence and is spatially extensive in the Permian Basin, extending over the Eastern Shelf. It is present across the majority of Winchester's leasehold on the Eastern Shelf. Approximately 40 miles to the south west of Winchester's acreage, oil rates of up to 1,250 bopd have been reported from horizontal fracked wells in the Wolfcamp 'D' Formation.

In the event of successful oil and gas production from Thomas 119-1H, Winchester has the right to a 12.5% WI back-in following the recovery by USEC of all costs associated with completion activities at Thomas 119-1H.

On top of the opportunity to back-in to a potentially producing well, any success with completion activities undertaken by USEC at Thomas 119-1H will add significant value to Winchester's surrounding Wolfcamp 'D' leasehold position given that Winchester's acreage position contains both Lower Penn Shales as well as other Wolfcamp 'D' intervals including the productive Three Fingers Shale.

An indication of the potential value of the Wolfcamp D formation is provided by past drilling and development activity 20 miles to the southwest of Winchester's leasehold in Fisher County. A shale unit of the Wolfcamp D has been horizontally drilled and fracked with initial flow rates of up to 1,250 barrels of oil per day reported.

Simplified Stratigraphic Column - Thomas 119-1H Targeted Interval

CORPORATE

The Company ended the quarter with cash reserves (in Australian dollar equivalent) of approximately AUD\$436,000.

On 7 December 2018 the Company announced a non-renounceable entitlement offer to raise up to \$2,851,488 (before costs). Shareholders have been offered 1 new fully paid ordinary share (New Share) for every 2 existing shares held in the Company.

CPS Capital Group Pty Ltd (CPS) has been appointed as Lead Manager and Broker to the Shortfall Offer which is currently scheduled to close at 2.00pm (WST) on Monday 4 February 2019.

The capital structure of the Company at the quarter ending 31 December 2018 was as follows:

Cash (AUD\$0.71: USD\$1.00)	AUD \$436,000
Total shares on issue and quoted	285,148,832
Total options on issue 30m @ \$0.25 (expire 30 April 2019) 20M @ \$0.12 (expire 31 January 2022)	50,000,000
Total convertible recoverable reserve milestone notes (converting to 60,000,000 shares)	60,000
Market capitalisation @ A\$0.02	AUD \$5.702m
Enterprise Value of the Company's assets	AUD\$5.266m
Founders, Board and Management (% ownership of the Company)	42%

Oil and Gas Leases Held as at 31 December 2018

Winchester's lease holding at the end of the December 2018 quarter is 17,266⁵ acres.

On 24 December 2018 Winchester announced that it was in the process of reviewing the status of both the Arledge and McLeod leases that in aggregate comprise approximately 7,200 acres of Winchester's 17,266 acre lease position.

On 25 January, 2019 Winchester announced that the lessor of the McLeod lease has confirmed that the Lease Agreement between the lessor and Winchester is in good standing. The McLeod lease covers an area of 4,246 acres.

Current legal advice from Winchester's US-based lawyers is that the Arledge lease remains in good standing. Winchester undertook re-entry operations in June 2018 within the primary term of the lease. As a result, Winchester understands that this operation fulfilled the requirements of the lease and thereby extended the lease for 12 months until July 2019.

Winchester will inform the market as soon as additional confirmation of the lease status of the Arledge lease is received.

⁵ The Company's net acreage position varies modestly in accordance with earned interests in drilling units of the current operations. The current net interest is 17,266 acres following CEGX's revised position in White Hat 39#1. Note the Company's announcement of 24 December 2018 advising that it is currently in the process of reviewing the status of the Arledge lease.

FORWARD-LOOKING STATEMENTS

This report contains forward-looking statements which are identified by words such as "believes", "estimates", "expects", "targets", "intends", "may", "will", "would", "could", or "should" and other similar words that involve risks and uncertainties. These statements are based on an assessment of present economic and operating conditions, and on a number of assumptions regarding future events and actions that, as at the date of this report, are expected to take place. Such forward-looking statements are not guarantees of future performance and involve known and unknown risks, uncertainties, assumptions and other important factors, many of which are beyond the control of Winchester, the Directors and management of Winchester. These risks, uncertainties and assumptions could cause actual results to differ materially from those expressed in any forward-looking statements. Winchester has no intention to update or revise forward-looking statements, or to publish prospective financial information in the future, regardless of whether new information, future events or any other factors affect the information contained in this report, except where required by law. Winchester cannot and does not give assurances that the results, performance or achievements expressed or implied in the forward-looking statements contained in this report will actually occur and investors are cautioned not to place undue reliance on these forward-looking statements.

COMPETENT PERSON'S STATEMENT

The information in this report is based on information compiled or reviewed by Mr Neville Henry. Mr Henry is a qualified petroleum geologist with over 43 years of Australian, USA and other international technical, operational and executive petroleum experience in both onshore and offshore environments. He has extensive experience of petroleum exploration, appraisal, strategy development and reserve/resource estimation, as well as new oil and gas ventures identification and evaluation. Mr Henry has a BA (Honours) in geology from Macquarie University.

⁶ Note the Company's announcement of 24 December 2018 advising that it is currently in the process of reviewing the status of the Arledge lease

Notes

1. The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity that wishes to disclose additional information is encouraged to do so, in a note or notes included in or attached to this report.
2. If this quarterly report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, AASB 6: Exploration for and Evaluation of Mineral Resources and AASB 107: Statement of Cash Flows apply to this report. If this quarterly report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
