

CLOUDTEN AWS MILESTONE

Highlights

- **Cloudten reaches an AWS milestone and attains the DevOps Competency**
- **Remains as one of the most accredited Australia-based AWS Consulting Partners**
- **Cloudten capabilities demonstrated in undertaking large and complex AWS customer engagements**
-

Transaction Solution International Limited (TSN) is pleased to advise that recently acquired Cloudten Industries has achieved Amazon Web Services (AWS) DevOps Competency status. This designation recognizes that Cloudten has deep experience helping businesses innovate and transform software development and infrastructure management practices to deliver automated applications and services – at rapid speed. Launched in June 2015, the DevOps Competency recognises trusted AWS Partners who demonstrate DevOps expertise which helps customers achieve their cloud infrastructure goals.

Already an AWS Advanced Consulting Partner, Cloudten provides a diverse range of cloud and technology solutions to enterprise clients across the banking, financial, health, and government sectors. The DevOps Competency was attained through the demonstration of technical proficiency and seamless delivery of DevOps solutions on AWS. Attaining the DevOps Competency requires partners to undergo a rigorous selection process involving customer references and an independent audit - ensuring that best practices are in use while helping enterprise clients meet their unique requirements within the cloud.

“Attaining the AWS DevOps Competency showcases Cloudten’s capability in accelerating our customers’ speed to market through high quality, highly automated applications,” stated Cloudten CEO, Richard Tomkinson. “The competency demonstrates our extensive experience building automation and streamlining customers’ build pipeline whilst maintaining strict policy enforcement and fleet consistency.”

Having recently been acquired by TSN, Cloudten’s attainment of the DevOps competency is a first step to enhance TSN’s cyber security offering, as well as to build on potential synergies amongst other TSN technologies.

Cloudten has previously attained the AWS Security Competency through ongoing expertise in helping customers adopt, develop, and deploy complex security projects. Cloudten was also the first AWS Consulting partner in Australia and New Zealand to be granted the AWS Government Competency, through ongoing success in delivering mission-critical applications and workloads to government customers.

With the achievement of the DevOps Competency in addition to the previously attained Government and Security competencies, Cloudten remains one of the most accredited Australia-based AWS Consulting Partners, and uniquely positions Cloudten for further growth in large and complex AWS customer engagements.
