Charley Creek Project – Completion of Drill Programme at Cattle Creek

Crossland Strategic Metals Ltd (Crossland) are pleased to announce the completion of the drilling programme located over sections of the former Cattle Creek Resource area. The programme included a total of 139 vertical NQ air-core holes for a total of 3,675 metres. Drilling was consistently spaced over an area of 10 sq.km.

Our technical team is currently analysing the drill cuttings and preparing the collected samples for assay analysis and metallurgical testing. Sample preparation work will continue through until early April. SRK Consultants (Perth) visited site to observe drilling operations, observe sampling protocols and logging procedures. SRK will act as competent persons to undertake resource estimation and reporting of mineral resources for the Cattle Creek work programme.

The purpose of the drilling programme is to re-establish the mineral resource over a portion of the former published Cattle Creek resource (April 2013), the target area for future mining operations. The process will take 2 to 3 months to complete.

Crossland will report findings as we progress our work.

Yours sincerely

Eric Vesel
CEO/ Director
Crossland Strategic Metals Ltd.
