

Quarterly Report

March 2019

Quarterly Report – March 2019

Highlights

- ✕ **Pre-Feasibility Study Approved** – strategic review and preliminary economic assessment (Scoping Study) of large scale mining and processing activities at Mt Mulgine strongly supports implementation of a PFS. Scoping Study highlights Mt Mulgine's potential to establish large scale, long life mining and processing operations for the production of tungsten concentrate and valuable by-products.
- ✕ **Updated Mineral Resource at Mulgine Hill** – infill drilling confirms continuity of high-grade zones in the Mineral Resource estimate at Mulgine Hill and increases the Indicated tonnes at Mulgine Hill by 37% with 25% more molybdenum and similar contained tungsten.
- ✕ **PQ diamond drilling has provided 4 tonnes of mineralised core** – for the metallurgical program at Mulgine Trench. Geological logging and sampling was completed in the December quarter with assay results now reported. The Geological Survey of Western Australia (GSWA) completed Hyperspectral Scanning of the 530 meters of PQ diamond core to assist in the development of a geo-metallurgical model of the deposit.
- ✕ **Significant thick zones of tungsten-molybdenum mineralisation confirm historical drilling at Mulgine Trench** – reported from assay results from sampling of metallurgical core at Mulgine Trench. Better intersections include:
 - 90 metres at 0.16% WO₃ and 0.015% Mo from 0 metres in MMD014.
 - 65 metres at 0.13% WO₃ and 0.032% Mo from 4 metres in MMD011.
- ✕ **Marketing samples provided to prospective customers** – upon completion of preparation of bulk scheelite concentrate during the March quarter. This included the production of 10kg of +55% WO₃ and 4 kg of +65% WO₃.
- ✕ **Hatches Creek Project** – The Company and GWR Group Ltd are finalising documentation for Tungsten Mining to acquire an interest in the Hatches Creek Tungsten Project located 375 km north east of Alice Springs in the Northern Territory of Australia.
- ✕ **Re-submission of NVCP application** – Provision of additional information has addressed the issues identified by the regulator with the only remaining item being the requirement to complete a targeted fauna survey and species identification scheduled in the June quarter.
- ✕ **Cash position** – The Company's cash position as at 31 March 2019 was \$36.43m.

Commentary

Tungsten Mining continues to implement its strategy directed at building a tungsten business of scale growing its resource inventory to 25.8 million MTU's (metric tonne units) of WO₃ (tungsten trioxide) and a further 19,500 tonnes of Mo (molybdenum) (refer accompanying Mineral Resource Statements).

Following on from the strategic review outlined in the December 2018 quarterly, the results of a scoping level pit optimisation and financial model on a larger scale development at Mt Mulgine concluded that investment in further studies was justified.

Tungsten Mining's CEO Craig Ferrier commented, "*The commitment to the Pre-Feasibility Study for large scale operations at Mt Mulgine is a fantastic endorsement of the project and its potential to deliver substantial value to shareholders. We remain committed to the goal of becoming a major producer of tungsten concentrate and believe that the proposed increase in the scale of activities at Mt Mulgine will greatly assist us to achieve this.*"

Tungsten Mining

Tungsten Mining NL ("the Company") is focussed on the discovery and development of tungsten deposits in Australia. The Company's key projects are Mt Mulgine, Big Hill and Kilba in Western Australia and Watershed in north east Queensland.

Through exploration and acquisition, the Company has grown its resource inventory, to 25.8 million MTU's (metric tonne units) of WO_3 (tungsten trioxide) and a further 19,500 tonnes of Mo (molybdenum) comprising Measured Resources of 9.5Mt at 0.16% WO_3 , Indicated Resources of 58.6Mt at 0.14% WO_3 and 21ppm Mo and Inferred Resources of 111.0Mt at 0.14% WO_3 and 165ppm Mo at a cut-off grade of 0.05% WO_3 (refer accompanying Resource Statement). This provides the platform for the Company to become a globally significant player within the primary tungsten market through the development of low-cost tungsten concentrate production.

Figure 1 – Projects location map

Mt Mulgine Project, Murchison WA

The Mt Mulgine Project remains the highest priority development project for the Company, responsible for the majority of activity during the quarter.

It is located within the Murchison Region of Western Australia, approximately 350km north northeast of Perth. The Company has 100% of the tungsten and molybdenum rights on a contiguous group of tenements that have been the subject of significant previous exploration for tungsten and molybdenum.

Two near surface Mineral Resources have been delineated at the Mulgine Trench and Mulgine Hill deposits. Currently, there is a combined Mineral Resource estimate of 71.0Mt at 0.18% WO₃ and 238ppm Mo (0.10% WO₃ cut-off) comprising Indicated Resources of 6.0Mt @ 0.22% WO₃ and 151ppm Mo and Inferred Resources of 65.1Mt @ 0.17% WO₃ and 246ppm Mo.

Figure 2. Location of Mulgine Hill Mineral Resource and Mulgine Trench diamond drilling.

Mt Mulgine Development Plan

March Quarter Activities

For the March quarter, work was focussed on the following major activities:

- ✕ Completed the preparation of 56.9% and 66.8% WO₃ concentrate samples for marketing purposes, originating from a bulk sample of Mulgine Hill ore;
- ✕ Prepared and released to the ASX results from the Q3 2018 drilling program on the Mulgine Hill Molybdenum prospect;
- ✕ Completed revised pit optimisations, pit designs and mining schedules based on the updated resource model;
- ✕ Completed detailed scope of work proposal and budget and received board approval to commence a Pre-Feasibility Study (PFS) for the larger Mt Mulgine Project with a completion date early 2020;
- ✕ Completed "hy-logging" of 4 diamond holes recovered from the Trench deposit as the initial phase in the development of a geo-metallurgical model of Trench;

- ✕ Continued R&D test work on the recovery of tungsten from the oxide layer of the Mt Mulgine deposit has identified the transitional material at Mulgine Trench as offering the greatest potential for the recovery of secondary tungsten mineralisation; and
- ✕ Submission of License to Take application in order to recover specific fauna for identification purposes.

Planned Activities – June Quarter

The major activities planned for the June quarter will be to;

- ✕ Commence 40m x 40m infill resource drilling of the optimised pit shell of the Trench deposit as required by the PFS work program;
- ✕ Commence all other studies required to deliver the PFS;
- ✕ Re-submit revised NVCP application in support of the clearing envelope identified for the Mulgine Hill deposit;
- ✕ Continue to provide tungsten concentrate marketing samples to potential off take partners; and
- ✕ Continue R&D test work on the recovery of tungsten from the oxide layer of the Mt Mulgine deposit.

Strategic Review – Commitment to a PFS for Large Scale Mining and Processing Operations

As reported in the December quarterly, the far greater extent of tungsten and molybdenum mineralisation at Mt Mulgine identified during the Q3 2018 drilling program resulted in the Company undertaking a strategic review of the entire Mt Mulgine project to better understand the opportunities that this represents. A focus of this review was an assessment of the potential for, or the earlier implementation of, large scale operations incorporating both the Mulgine Hill and the much larger Trench deposit.

Information from the studies completed by Tungsten Mining and previous project owners was utilised to complete pit optimisations and a preliminary economic assessment of alternative operating scenario's for the processing of material from both the Mulgine Hill and Trench deposits, the sequencing of mining, recovery of tungsten +/- molybdenum and at differing rates of throughput. The outcome of the review overwhelmingly supports the implementation of a PFS into large scale operations at Mt Mulgine. The preferred option to be assessed in the PFS will be the mining and processing of material from both deposits for the production of tungsten (scheelite) concentrate and a molybdenum rich sulphide concentrate.

The Scoping Study highlighted Mt Mulgine's potential to establish large scale, long life mining and processing operations for the production of tungsten concentrate and valuable by-products, including molybdenum.

The PFS will utilise Tungsten Mining's in-house team supported by global specialists to ensure international best practice in delivering a study that will meet the requirements of potential strategic partners, offtake customers and financial institutions and the completion of a DFS ahead of construction.

It is intended that one of the outputs of the PFS will be the declaration of a maiden ore reserve for the larger Mt Mulgine Project and accordingly resource definition will be a major component of the program.

Geology and Resources

Mulgine Trench

Tungsten mineralisation at Mulgine Trench is hosted by quartz-scheelite veins in mafic and ultramafic volcanics in a 100 to 250 metre thick zone that extends over 1.5 kilometres of strike. Mineralisation is open along strike and down dip and is associated with foliation parallel quartz veins generally less than 10 centimetres in width. Mineralisation is strongest where quartz veining averages 15 – 20% of the total rock.

During August 2016, the Company drilled 9 RC holes for 476 metres at Mulgine Trench to test tungsten mineralisation adjacent to and beneath the Bobby McGee pit. Results from this drilling were extremely encouraging, intersecting substantial thicknesses of tungsten mineralisation (i.e. 72 metres at 0.16% WO₃ and 0.02% Mo from surface in MMC030) and molybdenum mineralisation (40 metres at 0.08% WO₃ and 0.12% Mo from surface in MMC028).

In September 2018, the Company drilled four PQ diamond holes for 528.2 metres to obtain samples for metallurgical studies at Mulgine Trench (Figure 2). The PQ core will be used to conduct extensive test work to identify the optimal recovery process for both tungsten and molybdenum.

Geological logging and sampling was completed in the December quarter and assay results have now been received. The PQ diamond holes twinned historical diamond holes and one Tungsten Mining reverse circulation (RC) hole confirming original intersections. These holes demonstrated the significance of mineralisation present at Mulgine Trench by intersecting substantial thicknesses of low to medium grade tungsten-molybdenum mineralisation including 90 metres at 0.16% WO₃ and 0.015% Mo in MMD014 and 65 metres at 0.13% WO₃ and 0.032% Mo in MMD011. Drilling has provided four tonnes of mineralised core for the metallurgical program.

The Hazelwood 2014 Mulgine Trench Mineral Resource (Table 1) estimated grades for tungsten and molybdenum into 0.10% WO₃ domains and ignored low-grade tungsten that in many instances has associated molybdenum mineralisation. By including this mineralisation, the Company's recent metallurgical drilling and historic diamond holes indicates significant potential to add to the 2014 Mineral Resource. Mineralisation is open along strike, down dip and in some cases up dip.

Table 1: JORC-2012 Mineral Resource estimates for Mulgine Trench

Mulgine Trench Deposit – November 2014			
Classification	Tonnes (Millions)	WO ₃ %	Mo ppm
Indicated	0.4	0.14	400
Inferred	63.4	0.17	250
Total	63.8	0.17	250

Refer ASX (HAZ) Announcement 5 November 2014, "Hazelwood continues to increase tungsten resource".

A list of intersections above 0.05% WO₃ displaying the bulk tonnage potential at Mulgine Trench is presented in Table 2.

Table 2 –Tungsten – Molybdenum Intersections from diamond drilling at Mulgine Trench

Mulgine Trench Drilling - Significant Tungsten – Molybdenum Mineralisation (at 0.05% WO ₃ cut off)										
Hole No	MGA Coordinates				Intersections					
	Northing (m)	Easting (m)	Depth (m)	Dip/ Azim	From (m)	To (m)	Interval (m)	WO ₃ (%)	Mo (%)	Weathering
MMD011	6,773,387	496,696	93.1	-60/135	4	34	30	0.12	0.036	Weath.
MMD011					34	69	35	0.13	0.028	Fresh
MMD012	6,772,950	496,475	87.1	-60/135	14	54	40	0.10	0.087	Weath.
MMD012					54	78	24	0.08	0.028	Fresh
MMD013	6,772,920	496,323	177	-90	34	82	48	0.11	0.033	Fresh
MMD013					128	163	35	0.14	0.046	Fresh
MMD013					172	176	4	0.18	0.114	Fresh
MMD014	6,772,656	496,128	171	-90	0	27	27	0.16	0.021	Weath.
MMD014					27	90	63	0.16	0.013	Fresh
MMD014					116	136	20	0.19	0.040	Fresh
MMD014				(EOH)	163	171	8	0.13	0.059	Fresh

Quarter core samples analysed by XRF determination at Nagrom laboratories, Kelmscott WA. Lower cut-off grade 0.05% WO₃, no top cut grade. All high-grade intervals greater than 1.00% WO₃ listed. Intervals listed are >2 metres at 0.05% WO₃ with up to 2 consecutive metres of internal waste. Grid coordinates are MGA Zone 50. Fresh – contains fresh scheelite, Weath. – tungsten present in another mineral species. EOH – End of hole

Mulgine Hill

At Mulgine Hill, mineralisation is associated with the sub-horizontal upper contact of a mafic schist unit and overlying quartz-muscovite greisen. Tungsten occurs as scheelite in coarse disseminations within the greisen or within numerous quartz and greisen veins in both the mafic schists and the quartz-muscovite greisen.

Resource Update - March 2019

The previous Mulgine Hill Mineral Resource estimate was prepared by Optiro Pty Ltd in May 2017 in accordance with the guidelines provided by the 2012 JORC Code (see ASX Announcement dated 28 July 2017). Since the May 2017 Mineral Resource estimate, the Company has drilled an additional 153 RC holes for 8,912 metres and four HQ diamond holes for 321 metres.

Resource consultancy Optiro Pty Ltd was engaged to update the Mulgine Hill Mineral Resource and completed this exercise in March 2019. The revised Mineral Resource estimate for Mulgine Hill above a 0.10% WO₃ reporting cut-off grade is presented in Table 3.

Table 3: JORC-2012 Mineral Resource estimates for Mulgine Hill

Mulgine Hill Deposit – March 2019 reported above a 0.10% WO ₃ cut-off				
Classification	Oxidation	Tonnes (Millions)	WO ₃ %	Mo ppm
Indicated	Oxide	0.7	0.21	149
	Fresh	4.9	0.23	131
Sub-Total		5.6	0.23	133
Inferred	Oxide	0.4	0.20	127
	Fresh	1.3	0.18	109
Sub-Total		1.7	0.19	113
Total	Oxide	1.1	0.21	141
	Fresh	6.2	0.22	126
Grand Total		7.3	0.22	129

The Mineral Resource estimate for Mulgine Hill as of 21 March 2019 is 7,300,000 tonnes at 0.22% WO₃ and 129 ppm Mo (Refer to ASX announcement dated 12 April 2019). The drilling completed by the Company has resulted in a 37% increase of Indicated tonnes with 25% more molybdenum and 4% decrease in tungsten at a 0.10% WO₃ lower cut off.

Development – Mt Mulgine

Metallurgical Testwork

Oxide/Weathered Layer R&D

The R&D test work program to recover tungsten from the oxide/weathered zone continued in the March quarter.

Samples collected from the recent reverse circulation (RC) drilling program underwent HLS test work and mineralogical analysis to identify mineral types that will be amenable to gravity concentration. The results from this work showed there was recoverable scheelite in the oxide layer. Additional work is required to understand how this translates to the Mulgine Trench orebody where tungsten minerals can be economically extracted from the oxide layer.

A Federal Government (co-funding) grant application was submitted by Tungsten Mining to support further R&D work on the oxide ore. A scope of work for this will be issued pending an RC drill program of the Trench deposit.

Mulgine Trench

The Geological Survey of Western Australia (GSWA) completed Hyperspectral Scanning of the 530 meters of PQ diamond core recovered during the Q3 2018 drilling campaign. The results from this work along with the drill hole chemical data has been submitted to CSA Global to commence development of a geo-metallurgical model of the Trench deposit. It is planned to analyse additional existing Trench core to build on this model.

Two six tonne bulk samples have been collected from existing stockpiles at Mulgine Trench. This material will be sent for XRT ore sorting test work at TOMRA in NSW to determine the optimal particle size range and to understand the relationship between ore feed grade, waste rejection and grade of sorted product. The results of this work are expected to be completed in the next quarter.

Bulk Concentrate

The preparation of 10kg of a 56.9% WO₃ and 4kg of a 66.8% WO₃ bulk scheelite concentrate marketing samples was completed during the March quarter. Samples have been sent to two prospective customers for test work.

Regulatory Submissions

The Company continued to work with its environmental consultants and the Department of Mines, Industry Regulation and Safety (DMIRS) in relation to the re-submission of its NVCP application. As reported in the December 2018 quarterly, the Company's Mining Proposal and Works Approval require the assessment process for the NVCP to be completed prior to advancing.

Provision of additional information has addressed the regulator concerns; the only remaining item being the requirement to complete a targeted fauna survey and species identification scheduled in the June quarter.

Given a successful outcome of the fauna survey, re-submission of the NVCP application and Mining Proposal is planned for the June quarter.

Other Projects

Watershed Project, Far North, Queensland

Watershed is located 130km north of Cairns in a mining friendly jurisdiction, with granted Mining Leases and an Environmental Authority for an open-pit development. Former project owner, Vital Metals Limited (Vital Metals) completed a Definitive Feasibility Study (DFS) for the project in 2014.

The Watershed Project substantially adds to Tungsten Mining's global resource inventory and boasts a JORC 2012 Mineral Resource Estimate of 49.3Mt grading 0.14% WO₃ comprising Measured Resources of 9.5Mt at 0.16% WO₃, Indicated Resources of 28.4Mt at 0.14% WO₃ and Inferred Resources of 11.5Mt at 0.15% WO₃ at a cut-off grade of 0.05% WO₃ (refer ASX announcement dated 31 July 2018 - June Quarterly Report p23).

Figure 3 – Watershed Project location map

Big Hill Project, Eastern Pilbara, WA

The Big Hill Project area is located approximately 30km northeast of the Nullagine township in the Eastern Pilbara of Western Australia. The project contains the Big Hill deposit where 22,871 metres of diamond and RC drilling have defined a JORC-2012 Mineral Resource estimate totalling 11.5Mt at 0.15% WO₃ (0.10% WO₃ cut-off) comprising an Indicated Resource of 6.2Mt at 0.16% WO₃ and an Inferred Resource of 5.3Mt at 0.13% WO₃.

Metallurgical test work conducted on samples from Big Hill at bench and pilot scale has produced high quality tungsten concentrates at acceptable scheelite recoveries. This work has identified a simple and potentially low cost processing route.

Retention License R46/003 was granted in April 2017. There are no planned activities for the Big Hill Project in the next quarter.

Kilba Project, Ashburton Region, WA

The Kilba Project is located within the Ashburton Region of Western Australia, 250km southwest of Karratha. To date, Tungsten Mining has focused on the historic Zones 8, 11 and 12 that Union Carbide discovered in the 1970s. Drilling has targeted high-grade tungsten mineralisation associated with skarns and calc-silicate units situated close to the Kilba granite.

This work has defined a JORC-2012 compliant Mineral Resource totalling 5.0Mt at 0.24% WO₃ (0.10% WO₃ cut-off) comprising an Indicated Resource of 4.1Mt at 0.25% WO₃ and an Inferred Resource of 0.8Mt at 0.20% WO₃.

Metallurgical test work shows that the tungsten is present as coarse-grained scheelite that will respond well to conventional gravity separation. Test work completed in 2015 has demonstrated the ability to produce an extremely high grade tungsten concentrate.

In May 2017, DMIRS approved a 5 year exemption from expenditure for M08/314 pursuant to the Mining Act. There are no planned activities for the Kilba Project in the next quarter.

Other Projects, Regional WA

Tungsten Mining has two other projects in Western Australia prospective for tungsten, the Koolyanobbing and Callie Soak projects. Work on these projects continues to be in the initial stages of reconnaissance and target generation and it is hoped that these tenements will yield additional mineralisation that Tungsten Mining can exploit.

Corporate

Agreement to Acquire Hatches Creek Tungsten Project

On 3 September 2018 the Company announced that it had agreed the terms with GWR Group Limited (ASX: GWR) ("GWR") for the acquisition of the Hatches Creek Tungsten Project.

GWR has reported that it successfully completed RC drilling programs in 2016 and 2017, which confirmed multiple high-grade polymetallic tungsten prospects and demonstrated potential for a large high-grade polymetallic tungsten deposit. Further details on the Hatches Creek Project, including GWR's Exploration Target Estimate for the project, are set out in GWR's ASX announcement dated 17 July 2018 and in the June Quarter Activities Report released by GWR on 31 July 2018.

On 25 October 2018 the Company announced that following consultation with ASX the Company has been advised that the transaction as currently structured, purchase by way of cash consideration of \$8.68m, cannot proceed. Notwithstanding, both entities remain committed to implement a transaction to enable Tungsten Mining to invest in the Hatches Creek Tungsten Project and agreed to negotiate in good faith such amendments as may be required. Revised transaction documents are being negotiated and the market will be updated once finalised.

Tungsten Pricing

Global tungsten prices (by reference to price quotations for European ammonium paratungstate – APT) remained subdued over the quarter with prices improving in March.

Figure 4 – APT Price (source: Metal Bulletin, Argus)

Other

The Company's cash position as at 31 March 2019 was \$36.43m.

Competent Person's Statement

The information in this report that relates to Exploration Targets and Exploration Results is based on, and fairly represents, information and supporting documentation prepared by Peter Bleakley, who is a Member of the Australasian Institute of Mining and Metallurgy. Mr Bleakley is not a full-time employee of the company. Mr Bleakley is a consultant to the mining industry. Mr Bleakley has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Bleakley consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

The information in this report that relates to Mineral Resources at Mulgine Hill, Big Hill and Kilba are extracted from the reports titled 'Update on Activities at Mount Mulgine' released to the Australian Securities Exchange (ASX) on 12 April 2019, 'Big Hill June 2016 Mineral Resource Update' released to the ASX on 23 June 2016, and 'Kilba Mineral Resource Update' released to the ASX on 30 January 2015, all are available to view at www.tungstenmining.com. The information in this report that relates to Mineral Resource at Watershed is extracted from the report titled 'Watershed Mineral Resources Restatement JORC Code (2012)' released to the ASX on 4 July 2018 by Vital Metals Limited. The information in this report that relates to Mineral Resources at Mulgine Trench is extracted from the report titled 'Hazelwood continues to increase tungsten resource' released to the ASX by Hazelwood Resources Ltd on 5 November 2014. Tungsten Mining have drilled an additional 6 RC and five diamond holes into the Mulgine Trench Mineral Resource. Interpretation of all new data is proceeding and a revised estimate will be released later in 2019. Other than the aforementioned review, the Company confirms that it is not aware of any new information or data that materially affects the information included in the ASX announcements and that all material assumptions and technical parameters underpinning the estimates in original ASX announcements continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original ASX announcements.

About Tungsten Mining

Emerging Australian tungsten developer, Tungsten Mining NL is an Australian based resources company listed on the Australian Securities Exchange. The Company's prime focus is the exploration and development of tungsten projects in Australia.

Tungsten (chemical symbol W), occurs naturally on Earth, not in its pure form but as a constituent of other minerals, only two of which support commercial extraction and processing - wolframite ((Fe, Mn)WO₄) and scheelite (CaWO₄).

Tungsten has the highest melting point of all elements except carbon – around 3400°C giving it excellent high temperature mechanical properties and the lowest expansion coefficient of all metals. Tungsten is a metal of considerable strategic importance, essential to modern industrial development (across aerospace and defence, electronics, automotive, extractive and construction sectors) with uses in cemented carbides, high-speed steels and super alloys, tungsten mill products and chemicals.

Through exploration and acquisition, the Company has established a globally significant tungsten resource inventory in its portfolio of advanced mineral projects across Australia. This provides the platform for the Company to become a major player within the global primary tungsten market through the development of low-cost tungsten concentrate production.

Appendix 5B

Mining exploration entity and oil and gas exploration entity quarterly report

Consolidated statement of cash flows		Current quarter \$A'000	Year to date (9 months) \$A'000
2.2	Proceeds from the disposal of:		
	(a) property, plant and equipment	-	-
	(b) tenements (see item 10)	-	-
	(c) investments	-	-
	(d) other non-current assets	-	-
2.3	Cash flows from loans to other entities	-	-
2.4	Dividends received (see note 3)	-	-
2.5	Other (security deposit)	-	(168)
2.6	Net cash from / (used in) investing activities (see note 4)	(252)	(17,037)

3.	Cash flows from financing activities		
3.1	Proceeds from issues of shares	-	25,438
3.2	Proceeds from issue of convertible notes	-	-
3.3	Proceeds from exercise of share options	-	422
3.4	Transaction costs related to issues of shares, convertible notes or options	-	(1,332)
3.5	Proceeds from borrowings	-	-
3.6	Repayment of borrowings	-	-
3.7	Transaction costs related to loans and borrowings	-	-
3.8	Dividends paid	-	-
3.9	Other (provide details if material)	-	-
3.10	Net cash from / (used in) financing activities	-	24,528

4.	Net increase / (decrease) in cash and cash equivalents for the period		
4.1	Cash and cash equivalents at beginning of period	37,330	34,130
4.2	Net cash from / (used in) operating activities (item 1.9 above)	(644)	(5,187)
4.3	Net cash from / (used in) investing activities (item 2.6 above)	(252)	(17,037)
4.4	Net cash from / (used in) financing activities (item 3.10 above)	-	24,528
4.5	Effect of movement in exchange rates on cash held	-	-
4.6	Cash and cash equivalents at end of period	36,434	36,434

5. Reconciliation of cash and cash equivalents at the end of the quarter (as shown in the consolidated statement of cash flows) to the related items in the accounts	Current quarter \$A'000	Previous quarter \$A'000
5.1 Bank balances	3,629	2,647
5.2 Call deposits	32,805	34,683
5.3 Bank overdrafts		
5.4 Other (provide details)		
5.5 Cash and cash equivalents at end of quarter (should equal item 4.6 above)	36,434	37,330

6. Payments to directors of the entity and their associates

- 6.1 Aggregate amount of payments to these parties included in item 1.2
- 6.2 Aggregate amount of cash flow from loans to these parties included in item 2.3
- 6.3 Include below any explanation necessary to understand the transactions included in items 6.1 and 6.2

**Current quarter
\$A'000**

115

-

Payments to Directors for fees and consulting.

7. Payments to related entities of the entity and their associates

- 7.1 Aggregate amount of payments to these parties included in item 1.2
- 7.2 Aggregate amount of cash flow from loans to these parties included in item 2.3
- 7.3 Include below any explanation necessary to understand the transactions included in items 7.1 and 7.2

**Current quarter
\$A'000**

75

Payments to associate entity GWR Group Limited for management and technical services and the reimbursement of expenses incurred by GWR Group on behalf of the Company.

8. Financing facilities available

Add notes as necessary for an understanding of the position

- 8.1 Loan facilities
- 8.2 Credit standby arrangements
- 8.3 Other (please specify)

Total facility amount at quarter end \$A'000	Amount drawn at quarter end \$A'000
-	-
-	-
-	-

- 8.4 Include below a description of each facility above, including the lender, interest rate and whether it is secured or unsecured. If any additional facilities have been entered into or are proposed to be entered into after quarter end, include details of those facilities as well.

9. Estimated cash outflows for next quarter	\$A'000
9.1 Exploration and evaluation	1,000
9.2 Development	-
9.3 Production	-
9.4 Staff costs	295
9.5 Administration and corporate costs	450
9.6 Other	-
9.7 Total estimated cash outflows (see note 5)	1,745

10. Changes in tenements (items 2.1(b) and 2.2(b) above)	Tenement reference and location	Nature of interest	Interest at beginning of quarter	Interest at end of quarter
10.1 Interests in mining tenements and petroleum tenements lapsed, relinquished or reduced				
10.2 Interests in mining tenements and petroleum tenements acquired or increased				

Compliance statement

- 1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.
- 2 This statement gives a true and fair view of the matters disclosed.

Notes

1. The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity that wishes to disclose additional information is encouraged to do so, in a note or notes included in or attached to this report.
2. If this quarterly report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, AASB 6: Exploration for and Evaluation of Mineral Resources and AASB 107: Statement of Cash Flows apply to this report. If this quarterly report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. Net cash used in investing activities of \$17.04m (YTD) includes consideration paid and associated transactions costs of \$15.15m for the acquisition of the Watershed Project and \$1.72m for the acquisition of plant and equipment.
5. The estimated cash outflows for the next quarter include forecast expenditures related to the Pre-feasibility study of the Mt Mulgine Tungsten Project, the timing of which will vary from quarter to quarter.
