### **Gorge Creek JV – Traka consolidation to 100% project equity**

Cobalt QLD Pty Ltd (Cobalt) has agreed to sell to Traka its remaining 45.6% equity in the Gorge Creek Joint Venture for 30 million Traka shares.

The shares to be issued form part of the shortfall of Traka's recent 1:3 non-renounceable rights issue and are being allotted at a price of \$0.013 each, valuing the transaction at \$390,000. An Appendix 3B is attached.

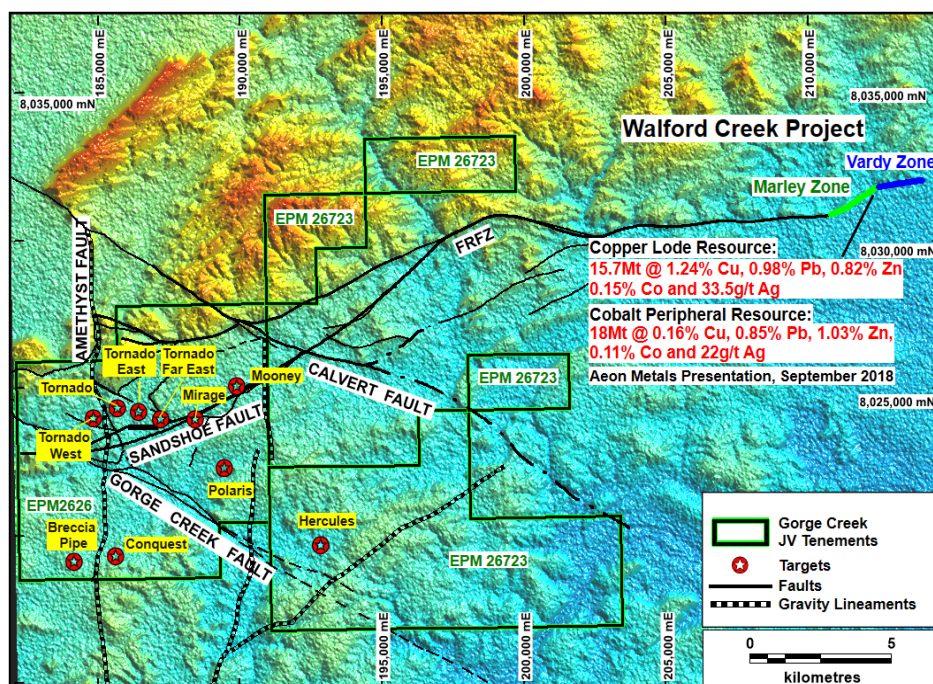

The consolidation of 100% of the Gorge Creek project into Traka is expected to assist in attracting future exploration funding and potential third-party joint venturers.

The large-scale fault-related and stratabound copper, lead and zinc targets identified on the project tenements are an exciting development but require and merit follow through with a higher level of funding than can currently be undertaken by Traka and Cobalt as two relatively small separate entities in depressed market conditions. Traka had earned around 54.4% equity in the Gorge Creek Joint Venture at the point in time the purchase agreement was reached with Cobalt.

Traka completed a 21-hole Reverse Circulation (RC) drilling program comprising 2,682 metres in July<sup>(1)</sup>. Structural targets on the Fish River Fault Zone and within stratabound positions to the south have been identified which merit immediate follow up (Figure 1). A comprehensive review of the new drilling data is currently underway but several targets, like that previously partly drilled at Hercules, remain immediate objectives. At Hercules it is hoped that a proposed diamond drill hole tail of about 100 metres will intersect the target at approximately 300 metres below surface.

The Gorge Creek tenements are in a particularly prospective part of the South Nicholson Sedimentary Basin which shares many of the key geological characteristics of the large Tier 1 stratabound lead and zinc deposits like those discovered at Century and MacArthur River.
