NetLinkz Limited announces commencement of the Australian roll-out of the VIN product with Omega Dev Group, as its first customer admitted to the Sydney IoT Lab

NetLinkz Limited (ASX: NET) ('NetLinkz') is pleased to announce the commencement of its Australian rollout of the NetLinkz VIN with Omega Dev Group, based in Sydney, Australia.

ODG has a distributed network of team members, partners and clients spread across the globe. This network required the use of a highly secure collaboration platform.

While various ad-hoc secure collaboration services were used in the past, these proved to be cumbersome to manage and difficult to maintain.

ODG has implemented the NetLinkz secure collaboration solution to utilise secure group chat and file management. These services operate over a secure, protected NetLinkz VIN and are only accessible and to users on the VIN.

This solution is accessed by ODG team members and partners world-wide using Windows, macOS, Android and iOS.

"Omega Dev Group has for some time been looking for a simple yet highly secure solution to better manage sensitive communication and collaboration between our local and international partner organisations. Working with the Netlinkz IoT Lab team we were able to quickly establish a working pilot within our own unique environment. We are very pleased to be part of the Netlinkz IoT Lab.
Blair Hickey, Managing Director, Omega Dev Group

"Netlinkz is pleased to welcome Omega Dev Group into the recently established Sydney IoT Lab. The highly secure collaboration services that ODG requires are well suited to the Netlinkz secure collaboration and VIN solution"
James Tsiolis Executive Chairman and CEO
