NetLinkz Limited announces expansion of the Australian rollout of the VIN product with Australian Defence Industry Specialists DI Advisory Services

NetLinkz Limited (ASX: NET) ('NetLinkz') is pleased to announce the expansion of its Australian rollout of the NetLinkz VIN product with DI Advisory Services (DIAS).

DIAS is bringing critical services to the Australian Defence industry and relies on the collaboration of a global network of team members, service providers and partners. This network requires the use of a highly secure distributed collaboration environment.

While various ad-hoc secure collaboration services have been used in the past, these have proven to be a challenge to install and utilise across the wide range of platforms that DIAS' network of service providers operate on.

DIAS is implementing NetLinkz VINs to provide remote access and secure collaboration to key members within DIAS' network. The VINs were deployed with no changes required to DIAS networks and a simple installation onto user laptops.

"I am really looking forward to utilising the Netlinkz' product suite to simultaneously improve our ability to collaborate while enhancing the security of our collaboration at the same time."

Andrew Garth – Managing Director – DI Advisory Services

"Netlinkz is excited to be tasked with the provision of a seamless and secure, software only solution for the global network of Defence Industry professionals involved in the DI Advisory Services Business. The highly secure collaboration services that DIAS requires are well suited to the Netlinkz secure collaboration and VIN solution"

James Tsiolis Executive Chairman and CEO

About DI Advisory Services

DI Advisory Services (DIAS) is a rapidly growing specialist services business that brings critical knowledge and resource capacity to growing Defence industry small to medium sized enterprises (SMEs).

Many of these businesses have complex and disparate needs as they grow, and they find it difficult and time consuming to access the support they need.

DIAS's collaborative model streamlines and integrates a range of services and service providers into a single managed service, tailored to meet the needs of these critically important businesses.
