

MyFiziq joint venture partner BCT signs binding agreement with Singapore Based Digital Healthcare Platform MyDoc.

MyFiziq Limited (ASX: MYQ) ("MyFiziq" or the "Company") would like to inform shareholders that Body Composition Technologies Pte Ltd ("**BCT**"), MyFiziq's 50% owned joint venture partner, has executed a binding term sheet with Singapore's premier digital telemedicine platform company, MyDoc Pte Ltd ("**MyDoc**").

The agreement pertains specifically to the insurance, government health and medical use of the technology to measure body composition and body circumferences which will be integrated into MyDoc's platform. MyDoc coordinates personal healthcare, as well as, acute, chronic and preventive medical care services in one fully integrated online-to-offline platform.

MyDoc's strategic partners in the region include global insurers such as Aetna, AIA and Cigna, together with a network of healthcare providers like Fullerton, IHP and AcuMed, leading regional pharmacy chains like Guardian Pharmacy and technology partners such as Omron. These partners and networks allow MyDoc to continue to innovate to make a difference in healthcare by delivering best of breed technologies to the forefront of their user experience and engagement.

Vlado Bosanac Group CEO said:

"We are very excited to be partnering with MyDoc. The company is a well-established and respected telemedicine platform / application for interacting with doctors online. BCT's technology is a sensible fit for MyDoc whose focus is providing acute, chronic and preventive medical care services. BCT has spent the last 2 years collecting medical data to enable key markers of the increased risk of chronic disease to be identified using its application.

The early detection and prevention of chronic lifestyle diseases is required worldwide to help combat the dramatic growth in type 2 diabetes and related conditions. Our technology has successfully demonstrated the ability to not only identify but segment participants into risk categories. We will be looking to demonstrate this to governments and health providers over the next 12 months with a view to making it available to populations around the world".

Dr. Vas Metupalle, Co-Founder and Chief Information Officer, MyDoc said:

"At MyDoc we focus strongly on preventative care, and a big part of that is managing the risks of chronic diseases. We wanted to improve the risk assessment for chronic diseases, to ensure our patients get an accurate diagnosis and are cared for at the soonest juncture.

"We chose to work with BCT because they have developed a unique technology that is evidence based, while keeping it user friendly to increase adoption. It is important for us to partner with companies and services that drive towards our goal of bringing outcome-driven, value-based healthcare in Asia. We are happy to work with BCT as a part of this ecosystem for our clients."

About MyDoc

MyDoc is a digital healthcare platform that delivers the right care at the right time.

Combining the latest in healthcare technologies and a GP-led coordinated care clinical triage, MyDoc continuously steers patients onto personal care pathways that lead to better health outcomes at lower costs.

Through MyDoc, employees and their dependents stay connected with a team of licensed allied healthcare professionals. Patients covered by corporate and personal healthcare plans from six of the largest health insurers in the region enjoy a convenient cashless care journey.

Established in 2012, MyDoc's integrated online-to-offline ecosystem is used by employees of over 200 Fortune 500 companies and insurance policyholders across six markets in Asia.

With MyDoc, every patient receives the right care at the right time. Anytime, anywhere.

About BCT

Body Composition Technologies (BCT), a 50% owned joint venture company with MyFiziq, is focused on developing a cost effective, easily accessible and reliable smartphone-based body composition and anthropometric measurement tool for governments, insurers, medical organisations and the medical research markets.

We strive to deliver a private, cost effective and accurate method for our users to identify, classify and monitor some of the primary markers of chronic diseases such as type 2 diabetes, coronary heart disease and stroke. This early screening, assessment and long-term monitoring of the primary markers of chronic disease, is essential for reducing the spiralling healthcare costs and improving the quality of life for billions of people worldwide.

We work with our partners to give them better engagement and understanding of their consumer / populations whilst empowering them through our technology to make better health decisions which in turn will deliver better health outcomes and lower mortality rates.
