Onyx Projects is now embarking on a full-scale NetLinkz VIN pilot

NetLinkz Limited (ASX:NET) ('NetLinkz') is pleased to announce the expansion of its Australian rollout of the NetLinkz VIN product with Onyx Projects, based in Perth, Western Australia.

Onyx Projects has a distributed workforce operating across Western Australia working to deliver significant resource projects across the state. Onyx personnel require ongoing, reliable access to key technical services hosted at the Onyx head office in Perth. These services include CAD design software, simulation systems and accounting systems.

Whilst traditional remote access solutions have been used in the past, these have proved to be difficult to implement and unreliable.

Onyx has recently completed a NetLinkz VIN product trial with the implementation of a VIN solution to provide remote access to key staff. The VIN was deployed with no changes to Onyx's technical infrastructure and a simple installation onto user laptops, leading to a full-scale NetLinkz VIN pilot to provide remote access to key business services for multiple staff at multiple locations across Western Australia.

"Allowing our remotely based personnel and contractors to reliably and securely access internal business systems and computational/simulation resources has always been a challenge for our company. Initial tests using the Netlinkz VIN technology are very promising and we hope that this pilot project will eventually provide a long-term solution to our remote access needs."

Ian Beaumont, Managing Director, Onyx Projects

"Netlinkz is pleased to welcome Onyx Projects into our recently established Sydney IoT Lab. Providing secure remote access solutions using our VIN technology represents a core offering for NetLinkz. The opportunity to work with Onyx Projects to deploy a VIN solution in a consulting project management and engineering environment is invaluable to both our companies"

James Tsiolis, Executive Chairman and CEO
