ASX RELEASE

25 November 2019

Savills Select Orcoda OLMS Announcement

Orcoda Limited (ASX: ODA) ('Orcoda' or 'the Company'), the logistics optimisation company is pleased to announce that it has entered into an MOU with Savills Australia's new supply chain division which has selected Orcoda's Logistics Management System (OLMS) to further support its industrial clients.

Orcoda has been providing transport solutions to the market for over 15 years. Orcoda's proven OLMS optimises and manages complex transport operations to meet Australian regulatory and environmental conditions.

As Savills enhances its services to its occupier clients, OLMS is seen as a tool to optimise their transport solutions and enable quantification of potential operational benefits. This builds upon other tools Savills uses to compare locations for distribution centres including the Savills NodeMaster platform built by the team at SA1 Property.

For Orcoda, this relationship further leverages the use of their software to optimise transport and distribution networks for both manufacturer/distributors and third-party logistics (3PL) organisations alike. It will provide Orcoda with an Australia wide sales network connecting Savills' customers with OLMS sales.

With a comprehensive suite of capabilities, OLMS provides modelling, operational planning, fleet and load allocation, Chain of Responsibility reporting, in-field transparency and enhanced customer services. Whether the objective is cost reduction, customer service improvement or an improved balance, OLMS brings the ultimate in planning and performance reporting to any logistics operation.

Bob Quirk, Savills Supply Chain director is experienced in using the current and previous version of the software for both modelling and operations. He said that "Savills selected the OLMS software because we believe it is a step above the competition due to its ability to meet the Australian requirements of fatigue and mass management under Chain of Responsibility legislation plus tailor to meet the constraints of tailored supply chains".

"Through a comprehensive side-by-side look at historical vs. optimised transport allocation, I've been able to identify efficiency savings and to find the right balance between strategy, location, compliance, cost, and customer service. OLMS provides an ability to compare the costs and KPIs of alternative scenarios based on historical data, with detailed reports providing insights into potential improvements. It also provides the opportunity to create an integrated warehousing and distribution solution to last mile challenges".

"We look forward to the partnership to provide our clients with an accurate assessment of the costs and implications of operational or service level changes, so that they can make the right strategic decisions"
