Completion of EM Survey at Coronation Dam

White Cliff Minerals Limited (“**White Cliff**” or the “**Company**”) advises shareholders, that further to the announcement of 31 October 2019, the ground moving-loop electro-magnetic (“**EM**”) survey has been completed at the Company’s 100% owned Coronation Dam nickel-cobalt project, Western Australia.

The EM survey consisted of approximately 18 line kilometres on 400m spaced lines (EW local grid) with 200m loops to provide the most cost effective coverage, and aimed to cover the entire ultramafic unit within E31/1101 and test for conductors within the mapped ultramafic to a depth of 400 metres. Southern Geoscience – the geophysical consultants to the Company – are currently reviewing the data collected from the EM survey, which the Company hopes to announce in the coming weeks. On the basis EM conductors are identified, the Company will then look to test any identified conductors with a limited drilling program.
