

# Dampier Gold Limited (ASX: DAU)

INVESTOR PRESENTATION

JANUARY 2020

dampiergold

*Transformational gold explorer and emerging producer*

*Significant project holding in a World Class Gold region of  
~20Moz production*

# Disclaimer

This document has been prepared by Dampier Gold Ltd ACN 141 703 399 (ASX:DAU) (**Dampier** or the **Company**). No party other than Dampier has authorised or caused the issue of this document, or takes responsibility for, or makes any statements, representations or undertakings in this document.

**Presentation of general background:** This document contains general background information about Dampier's proposed activities current as at the date of this presentation (Information). It is Information in a summary form only and does not contain all the information necessary to fully evaluate any investment. Further Information on Dampier can be obtained from its website at [www.dampiergold.com](http://www.dampiergold.com).

**Not investment advice:** The Information provided in this presentation is not intended to be relied upon as advice to investors or potential investors and has been prepared without taking into account the recipient's investment objectives, financial circumstances or particular needs. Any investment decision should be made based solely upon appropriate due diligence and, if applicable, upon receipt and careful review of relevant offering documents. Recipients of this presentation are advised to consult their own professional advisers.

**Future performance:** This presentation contains certain forward-looking statements. The words 'anticipate', 'believe', 'expect', 'project', 'forecast', 'estimate', 'likely', 'intend', 'should', 'could', 'may', 'target', 'plan' and other similar expressions are intended to identify forward-looking statements. Indications of, and guidance on, future earnings and financial position and performance are also forward-looking statements. Such forward-looking statements are not guarantees of future performance and involve known and unknown risks, uncertainties and other factors, many of which are beyond the control of Dampier, and its officers, employees, agents and associates, that may cause actual results to differ materially from those expressed or implied in such statements. Actual results, performance or outcomes may differ materially from any projections and forward-looking statements and the assumptions on which those assumptions are based. You should not place undue reliance on forward-looking statements and neither Dampier nor any of its directors, employees, servants, advisers or agents assume any obligation to update such Information.

# Competent Persons Statement

## Competent Persons Statement – Terra Search Pty Ltd

*The information in this report that relates to exploration results has been compiled by **Mr David Jenkins**, a full time employee of Terra Search Pty Ltd, geological consultants employed by Dampier Gold Ltd. Mr Jenkins is a Member of the Australian Institute of Geoscientists and has sufficient experience in the style of mineralisation and type of deposit under consideration and the activity which they are undertaking to qualify as Competent Persons as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results ("JORC Code"). Mr Jenkins consents to the inclusion in the report of the matters based on the information in the form and context in which it appears.*

## Competent Persons Statement

*Mr Malcolm Carson has reviewed and presented information in this report from information and exploration results compiled by consultants to the Company and presented to Dampier Gold Limited. Malcolm Carson has sufficient experience that is relevant to the style of mineralisation, the types of deposits under consideration and to the activity that he is undertaking and qualifies as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results ("JORC Code"). Mr Carson is a Member of the Australian Institute of Mining and Metallurgy (AusIMM) and Australian Institute of Geoscientists (AIG) and is a Director of Dampier Gold Limited and Allegiance Coal Limited. Mr Carson consents to the inclusion in the report the matters based on the information in which it appears.*

## DATA SOURCE / REFERENCES:

*Summary of results from the data reviewed and analysed by Dampier and its independent consultants during its due diligence were released to the market on 19<sup>th</sup> December 2019 under the heading: DUE DILIGENCE UPDATE CREDO AND ZULEIKA PROJECTS which includes results which are repeated in slides in this presentation.*

# EXECUTIVE SUMMARY

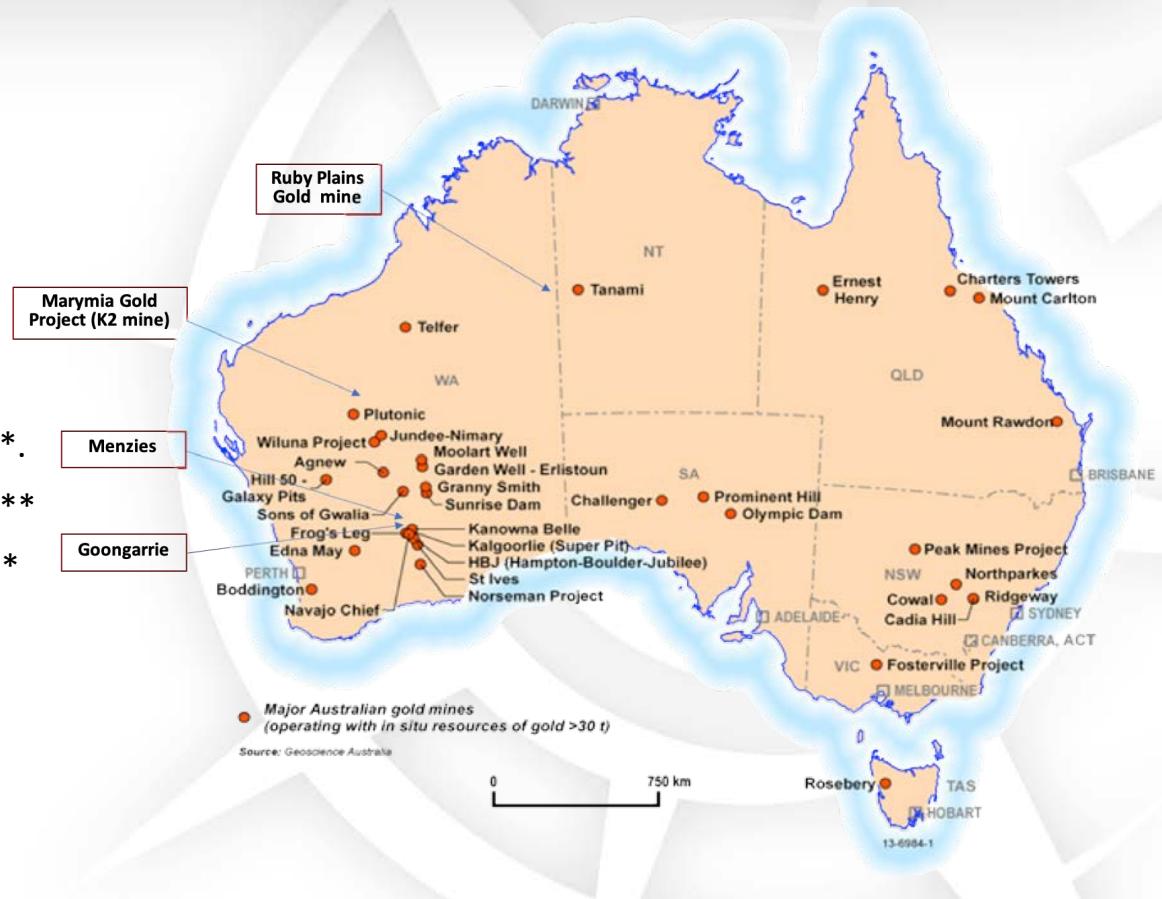

**Aim to be a gold producer within 3 years**

dampiergold

## Advanced highly prospective projects:

- Marymia/K2 Gold Project:
- K2 Gold Project (4.1% owned, with JV to earn up to 50%).\*
- Milestone Payments due to Dampier - \$4M\*\*.
- Royalty Payments due to Dampier - \$2M\*\*.
- Zuleika JV Gold Project (JV to earn 75%) \*\*\*
- Credo JV Gold Project (JV to earn 50%) \*\*\*
- Menzies Gold Project (80%)
- Goongarrie Gold Project (80%)
- Ruby Plains Gold Project (100%)

# **Marymia Gold Project including K2 Gold Project**

# Marymia Gold Project

**Dampier has rights both Milestone Payments and Royalty Payments**

On 16<sup>th</sup> August 2016 Dampier and Vango Mining Limited (ASX: VAN) (**Vango**) entered into an Agreement for Sale and Purchase of all of the shares in Dampier (Plutonic) Pty Limited (**DPPL**) then being a wholly owned subsidiary of Dampier (**DPPL Agreement**) as well as a Royalty Deed (**DPPL Royalty Deed**):\*

1. Both the DPPL Agreement and DPPL Royalty Agreement related to a number of mining tenements (including the K2 Project Tenement) then owned 60% by Vango and 40% by DPPL (**DPPL Tenements**).
2. As part of the consideration payable by Vango to Dampier as specified in both the DPPL Agreement and the DPPL Royalty Deed, Dampier is entitled to be paid by Vango up to a further A\$6M from the successful development of any of the DPPL Tenements (including but not limited to the K2 Project) in both milestone payments (**Milestone Payments \***) and royalty payments (**Royalty Payments \***), namely:

- a. The Milestone Payments are as follows:

Production Milestone for DPPL Tenements	Amounts payable to Dampier
45,000 ounces	A\$1M
100,000 ounces	A\$1M
200,000 ounces	A\$1M
300,000 ounces	A\$1M

- b. The Royalty Payments (capped at A\$2M), payable quarterly, are as follows:

Gold Price Threshold London spot fix AM (USD/oz)	Royalty payable as % of the value of gold produced
US\$1,175 - US\$1,250	1%
US\$1,250 - US\$1,400	2%
US\$1,400 - US\$1,500	3%
US\$1,500+	4%

\* Reference: DAU ASX Announcement Sale of Plutonic Dome Gold Project 25 August 2016

# K2 Gold Project – Joint Venture

## Binding Joint Venture

Separate and apart from the Milestone Payments and Royalty Payments, Dampier, Vango and DPPL entered into a binding Joint Venture in relation to the K2 Gold Project (part of Marymia Gold Project) dated 12<sup>th</sup> May 2017:

- Dampier has the right to earn up to a 50% beneficial and legal interest in the K2 Project by expending the lesser of 50% of Capex (a defined term) for the K2 Project or A\$3M in project expenditure (**Earn-In Rights**). \*
- Vango has acknowledged and agreed that Dampier had already expended A\$245,239.78 in valid project expenditure and that such expenditure formed part of Dampier's Earn-In Rights representing a minimum of a 4.1% interest in the K2 Project (**4.1% Interest**). \*\*
- On 9<sup>th</sup> August 2018 Dampier issued a Notice of Dispute to Vango in relation to the Joint Venture, which dispute has yet to be resolved.
- On 18<sup>th</sup> September 2018 Vango announced an unsolicited scrip-for-scrip takeover offer of Dampier (**Takeover Offer**).
- Dampier received on 1<sup>st</sup> November 2018 an Independent Expert's Report from Stanton's International Securities which Dampier released to the ASX on 5<sup>th</sup> November 2018 in the Target's Fourth Supplementary Statement which stated, *inter alia*, that the Takeover Offer was "*not fair and not reasonable*" for Dampier shareholders.
- The Takeover Offer closed on 4<sup>th</sup> January 2019 and was not successful.
- Vango currently owns 37,738,568 shares in Dampier representing 19.81%.

\* Reference: DAU ASX Announcement K2 Mine Development 16 May 2017

\*\* Reference: DAU ASX Announcement Sale of Plutonic Dome Gold Project 25 August 2016

# K2 Gold Project - Resources

**Dampier pursuing its rights to increase from 4.1% to up to 50% equity in the K2 Project**

dampiergold

- K2 Project is part of Plutonic Dome Gold Project and is located 50km north of Sandfire's Degrussa copper gold mine and 35km north east of the Plutonic Mine and Processing plant.
- Current K2 JORC 2012 Resources: \*
  - Indicated 0.20Mt @ 8.9 g/t Au (57Koz)
  - Inferred 0.22Mt @ 6.7 g/t Au (47Koz)
  - Total Resources of 0.42Mt @ 7.7g/t Au (103Koz)
- Existing 1.4km decline developed by Resolute Mining Limited in 1997 to the ore blocks.
- Resolute completed an underground development Feasibility study in 1996 and excavated a boxcut for the decline portal. The mine was prematurely closed in 1998 due to historically weak gold prices, after only minor amounts of ore extraction.

K1 pit – to bedewatered historic photo

K2 Decline Box Cut and Portal  
historic photo

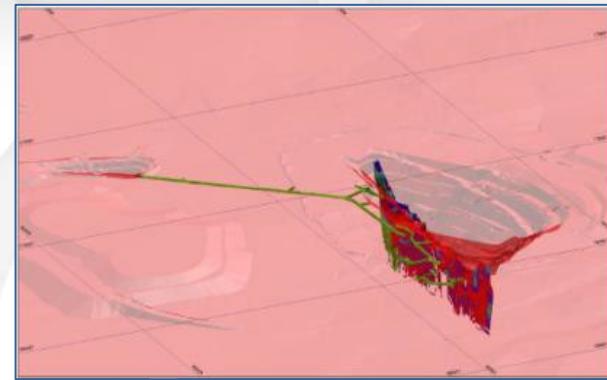

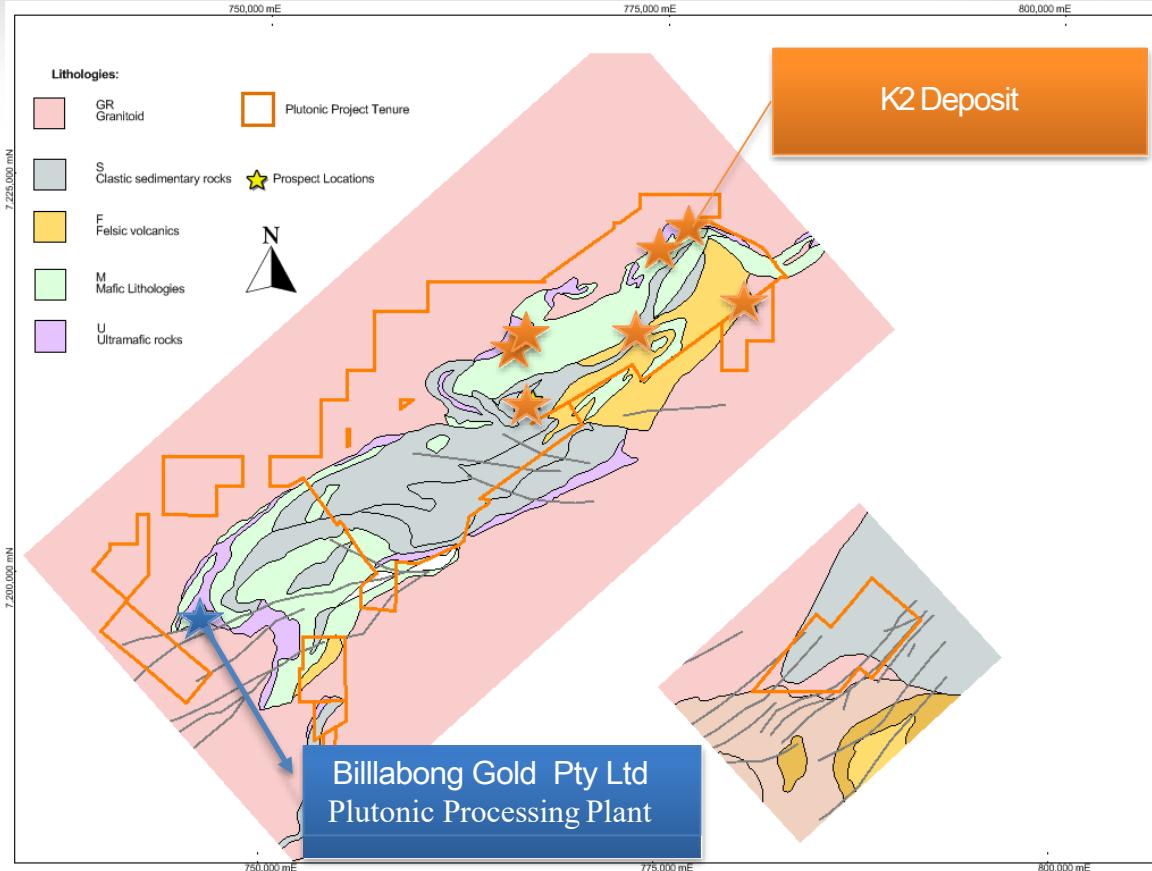

\* Reference: DAU ASX Announcement 8 October 2014

# K2 Gold Project – Existing Infrastructure

Plutonic Dome Tenements, Geology, K2 location and Processing Facilities

dampiergold

**K2 Deposit and Existing H1.4 kilometer Decline**

Existing Infrastructure includes:

- 1.4km decline to ore blocks
- 35km to Billabong's Processing Plant
- Existing haul roads to Plant
- Fully equipped mining camp, fleet and personnel at Billabong's Plutonic Mine

NOTE: There is a current legal dispute between Billabong Gold Pty Ltd, a wholly owned subsidiary of Superior Gold Inc (TSX-V: SGI) and Vango in relation to the Plutonic Gold Project including the K2 Project.\*

\* Reference: DAU ASX Announcement, 9 November 2018 and Fourth Supplementary Target Statement, 5 November 2018

# *Plutonic Dome Gold Area – Naming of Projects*

## *Clarification of terminology used by Dampier and Vango*

dampiergold

### **Naming of Projects:**

For clarity, each of Dampier, and Vango use different project names in their respective reporting and ASX announcements and in summary:

- a. By Dampier:
  - i. The Plutonic Dome Gold Project means the same ground/tenements as the DPPL Tenements.
  - ii. The Milestone Payments and Royalty payments relate to the DPPL Tenements.
  - iii. The K2 Gold Project relates to part of the DPPL Tenements.
  - iv. The Marymia Gold Project relates to part of the DPPL tenements
  
- a. By Vango:
  - i. Project names include Marymia, Trident, Marwest, Mareast, Mars, Pelican, Wedgetail, Trident, Vulcan, Triple-P and Albatross Flamingo-Exocet and all relate in part or whole to the Plutonic Dome Gold Project/DPPL Tenements.
  - ii. The K2 Gold Project relates to part of Vango's Projects.

## Kalgoorlie Tenements Locations

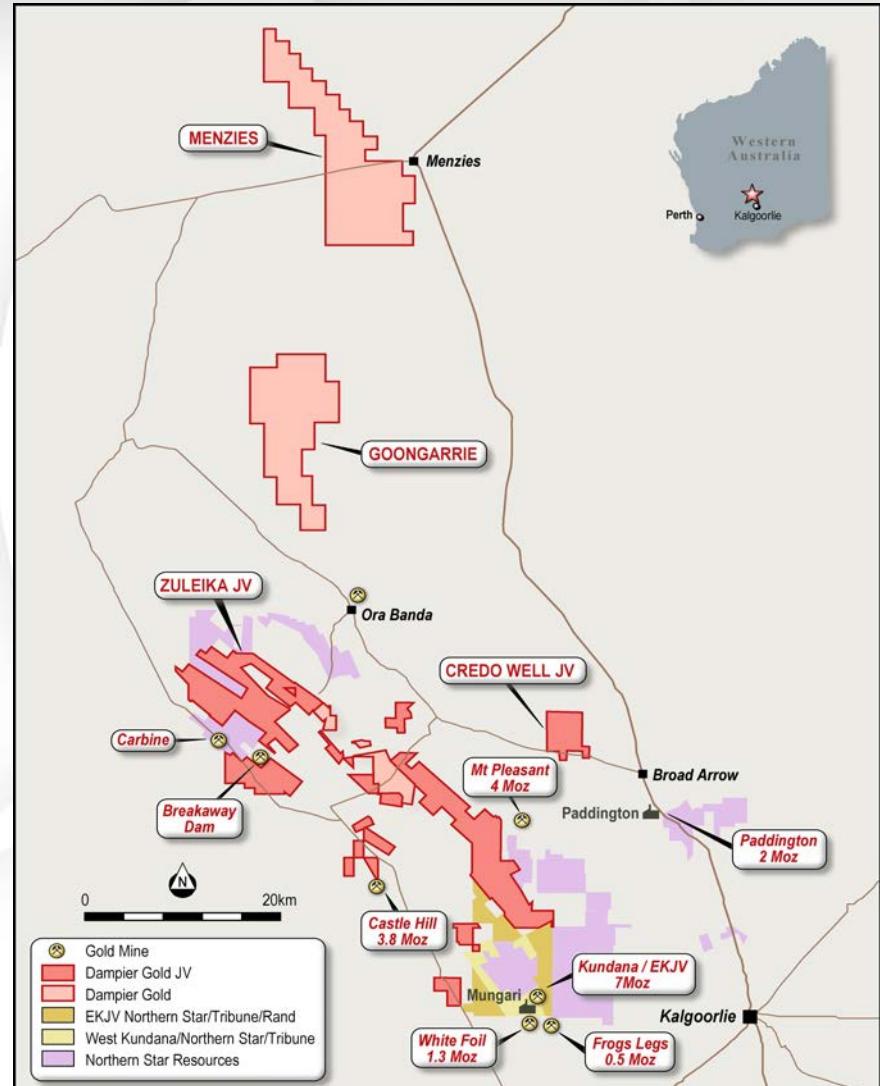

# Kalgoorlie Tenement locations

Company making potential – flagship projects

dampiergold

- Zuleika JV – 50km NW of Kalgoorlie, WA (JV for up to 75%)
- Credo JV - 35km N of Kalgoorlie, WA (JV for up to 50%)
- Menzies - 120km N of Kalgoorlie, WA (80% owned)
- Goongarrie - 90km NE of Kalgoorlie, WA (80% owned)

Zuleika & Credo

dampiergold

*“With more than 20million  
ounces of historical  
production, the Zuleika  
Shear is one of the most  
sought after gold regions  
in Australia.*

*The largely ignored parallel  
Carnage Shear displays  
many of the same  
characteristics”*

Malcolm Carson, Dampier Gold Executive  
Chairman

# Zuleika and Credo Joint Ventures

## Term Sheets key points

dampiergold

### Zuleika Gold Project JV:\*

Dampier has farm-in rights to earn up to **75% interest** in the Zuleika tenements held by Torian Resources Ltd (Torian) over 4 years as follows:

- Earn initial interest of 30% by spending \$1M on the project (year 1), then additional 15% interest each year by spending a further \$1M per year on the project to earn up to 75% (year 4).
- On completion the farm-in will convert to an unincorporated JV.
- Dampier to grant a convertible note debt instrument of A\$500,000 to Torian at \$0.01/share conversion rate.
- Dampier to issue 10,000,000 2 year options to Torian at exercise price if \$0.15 per option.

### Credo Well Gold Project JV:\*

- Dampier has farm-in rights to earn up to **50% interest** in the Credo tenements held by Torian over 4 years as follows: Earn initial interest of 25% by spending \$0.5M on the project (year 1), then additional total 25% interest by spending a further \$0.5M on the project each following year to earn up to 50% (year 4).
- On completion the farm-in will convert to a unincorporated JV.
- Dampier will have a casting vote in the JV when it holds interest of 50% or more.

\* Reference: DAU ASX Announcement 4 October 2019 and shareholder approval announced 19 December 2019

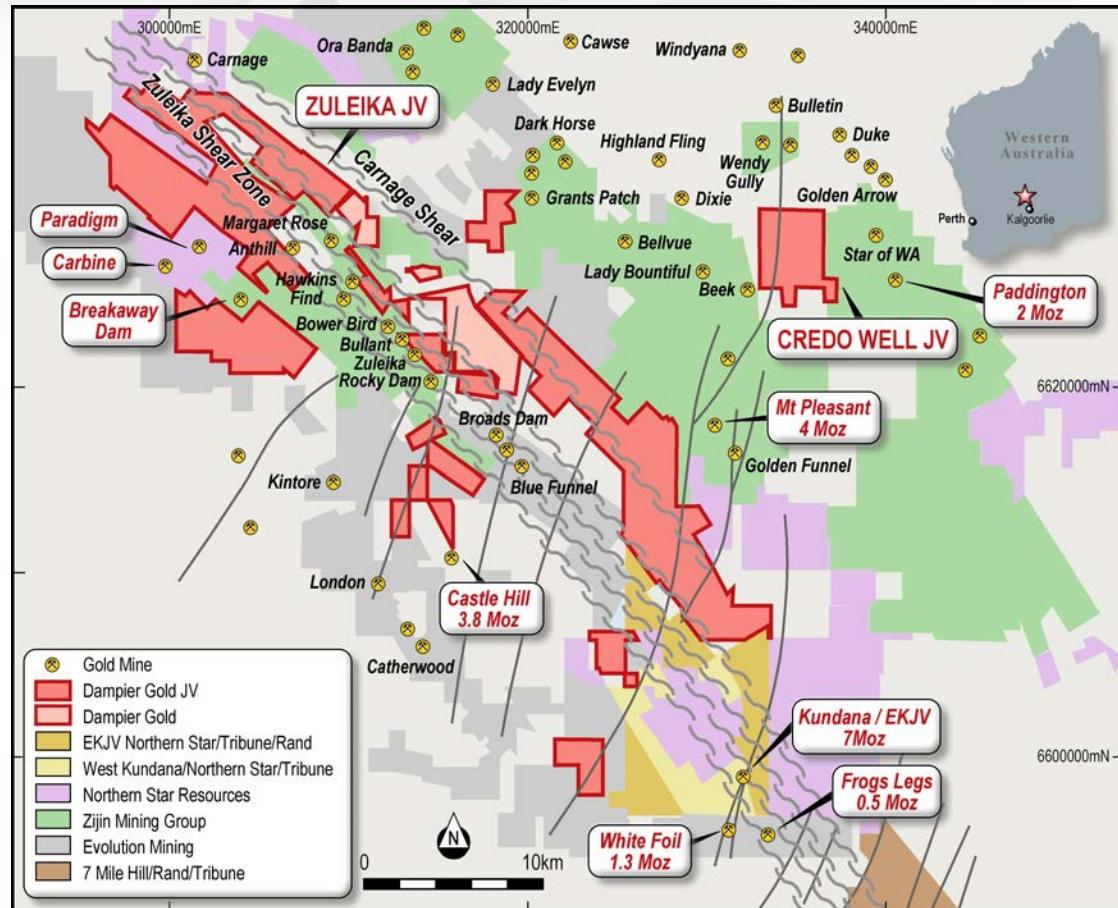

# Zuleika JV Gold Project – Overview (JV to earn up to 75%)

dampiergold

## Flagship Project Overview

- 2 Mining Leases, 1 Exploration Licence and 108 Prospecting Licences with total land area ~222km<sup>2</sup>.\*
- Project covers ~50km of highly prospective Black Flag sequence, Zuleika and Carnage Shears.\*
- Nearby major gold producers include:
  - Evolution Mining – 2<sup>nd</sup> largest gold producer on the ASX
  - Northern Star – 3<sup>rd</sup> Largest gold producer on the ASX
  - Zijin Mining – China's largest gold producer
  - Tribune and Rand – JV with Northern Star

\* Reference: DAU ASX Announcement 4 October 2019 and 19 December 2019

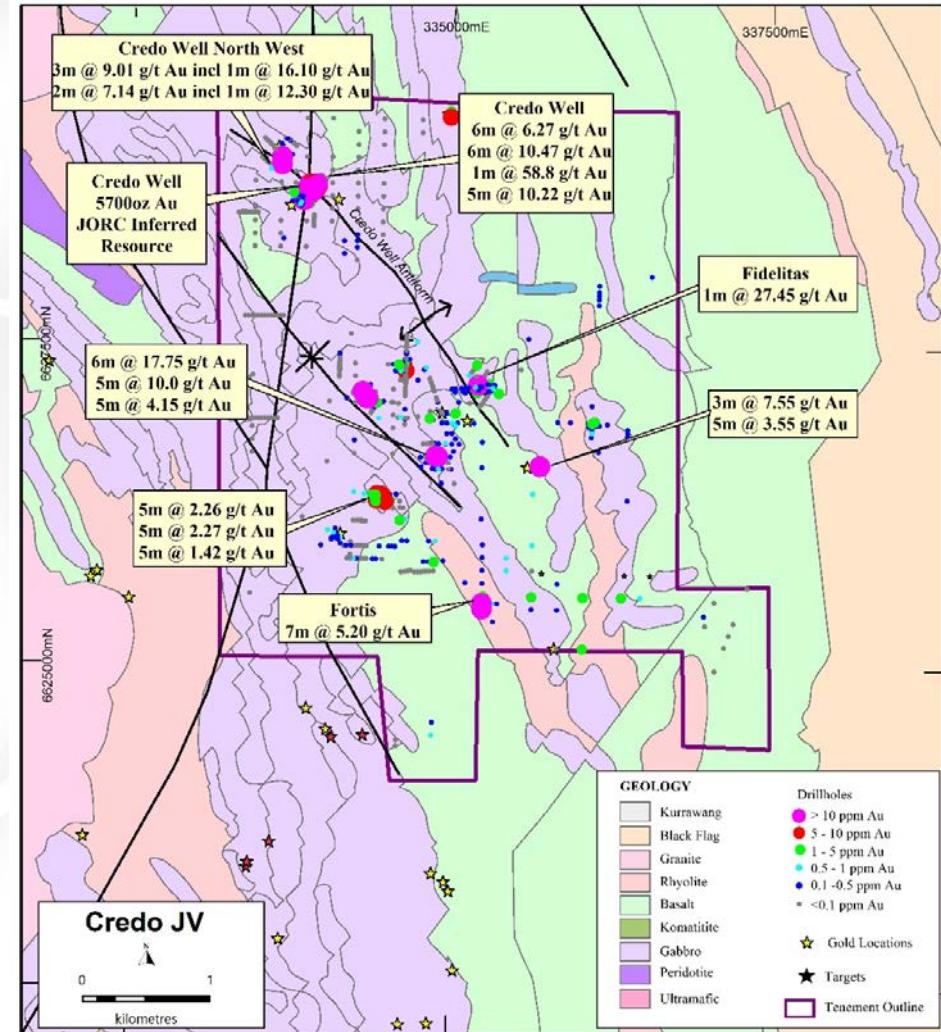

# Credo Well JV Gold Project – Overview (JV to earn up to 50%)

dampiergold

Located in multi-million ounces Mt Pleasant district

- 15 Prospecting Licenses, 14 of which are consolidated into 1 Mining Lease Application with total area of ~17km<sup>2</sup>.
- Prospective gold targets including Credo Well, Fortis and Fidelitas
- Potential for both supergene and primary gold mineralisation
- High grade intersections include:
  - 3m @ 16.46g/t Au from 54m
  - 1m @ 58.80g/t Au from 1m
  - 4m @ 32.51g/t Au from 27m
  - 2m @ 57.05g/t Au from 29m
  - 1m @ 68.50g/t Au from 39m

# Exploration Development Priorities

Drill ready targets – targeted mineralized zones

dampiergold

RC Rig Drilling at Dampier's Zuleika JV Project  
historical photo

RAB Drilling at Dampier's Zuleika JV Project  
Historical photo

Priority 1

Credo  
Paradigm East  
Browns Dam

*(define resource in year 1)*

Priority 2

Zuleika Central  
Carnage Shear

*(drill test with deeper drilling 800 ha  
area of anomalous bedrock gold  
and 12km strike)*

Priority 3

**Castle Hill East** – drill test extensive bedrock  
anomaly with >500m strike

**Regional** - geochemical sampling and geophysics  
for second stage target generation

# *Next steps: Accelerated Drilling Program*

*Continuous exploration news flow anticipated*

dampiergold

## Drill program targeting a minimum of 65,000m over 12 - 48 months

<b>Paradigm East</b>	4,000m RC, drill test identified mineralisation open to the north, south and south west. Scope to define a resource in year 1
<b>Credo</b>	4,000m RC, drill test supergene and primary gold mineralisation open at depth and along strike. Scope to define a resource in year 1.
<b>Browns Dam</b>	4,000m RC, drill test identified untested bedrock anomaly associated with typical gold bearing Komatiites over a >2km strike.
<b>Zuleika Central /Carnage Shear</b>	25,000m AC, drill test with deeper drilling 800ha area of anomalous bedrock gold and 12km strike adjacent to the Carnage Shear.
<b>Castle East</b>	4,000m RC, drill test extensive bedrock anomaly with >500m strike
<b>Regional</b>	Geochemical sampling with auger drilling, and geophysics for second stage target generation

Total budget \$6M over 4 years including year 1 \$1.5M (subject to funding).

## Menzies & Goongarrie Projects

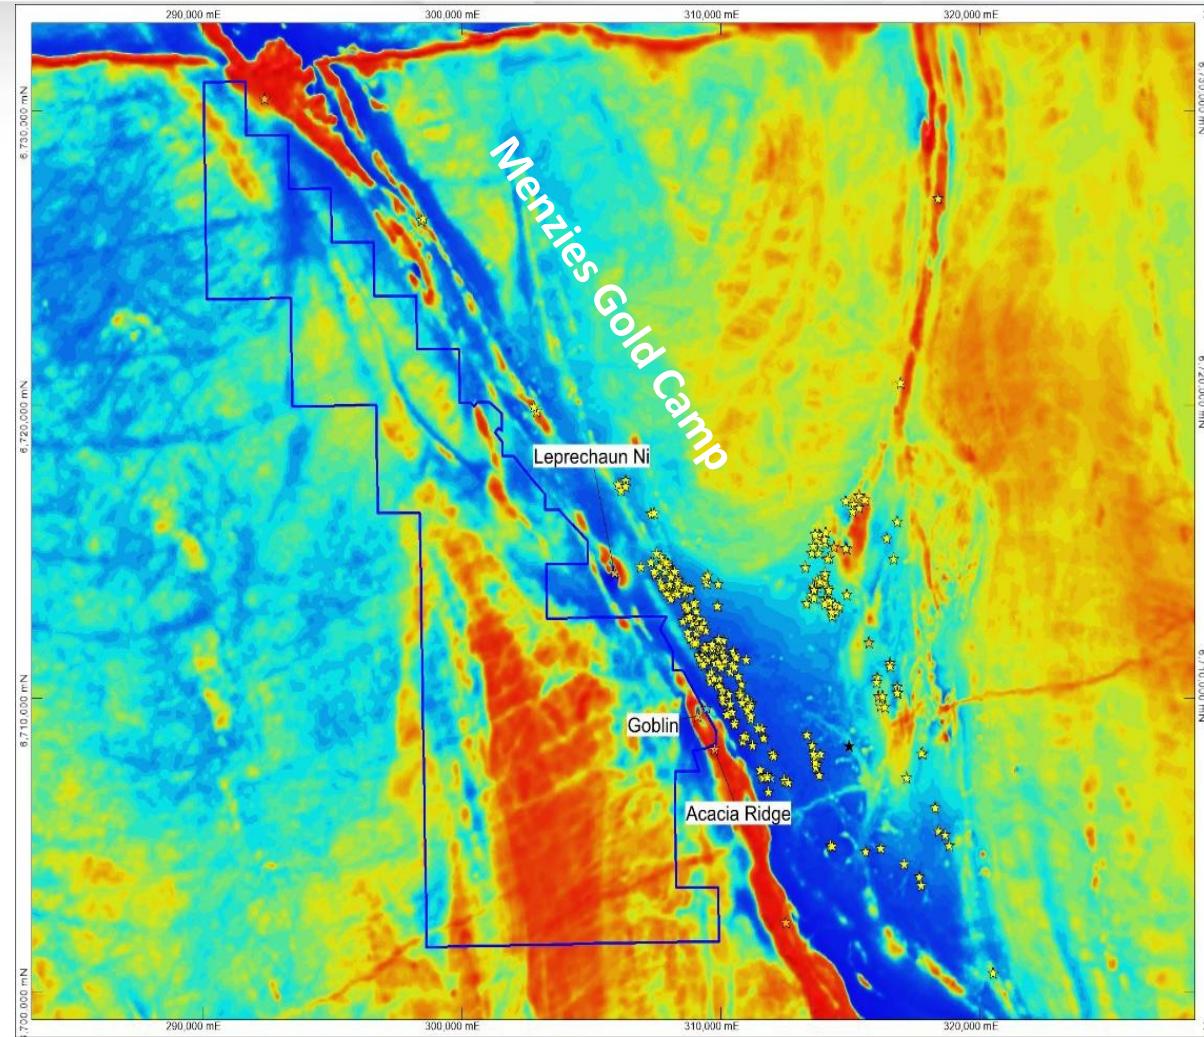

# Menzies Gold Project – Overview (80% owned)

dampiergold

## Overview

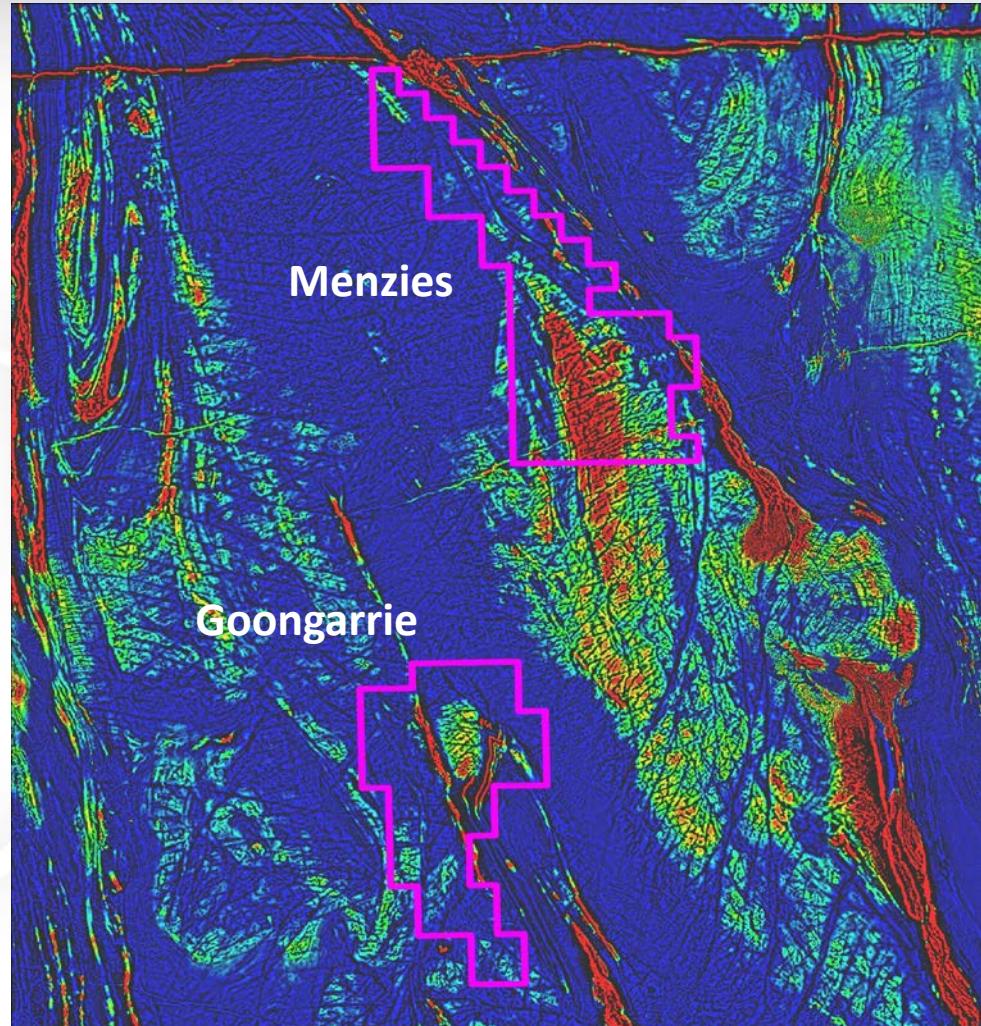

- The Menzies Gold Camp has produced >500,000 oz gold (gold stars)
- Historic underground mines show the mineralization was very high grade
- The “untested” eastern border of the Menzies tenement covers the greenstone contact and lies adjacent to the Menzies Goldfield
- Regional magnetics suggest the presence of mafics and ultramafics

# Goongarrie Gold Project – Overview (80% owned)

## Overview

- Goongarrie Tenements overlie unexplored Greenstone lithologies
- Significant untested structure beneath sand and lake sediments
- Dampier field work confirmed the presence of ultra-mafic/mafic and felsic rocks and anomalous gold and nickel results .

# Ruby Plains Gold Project

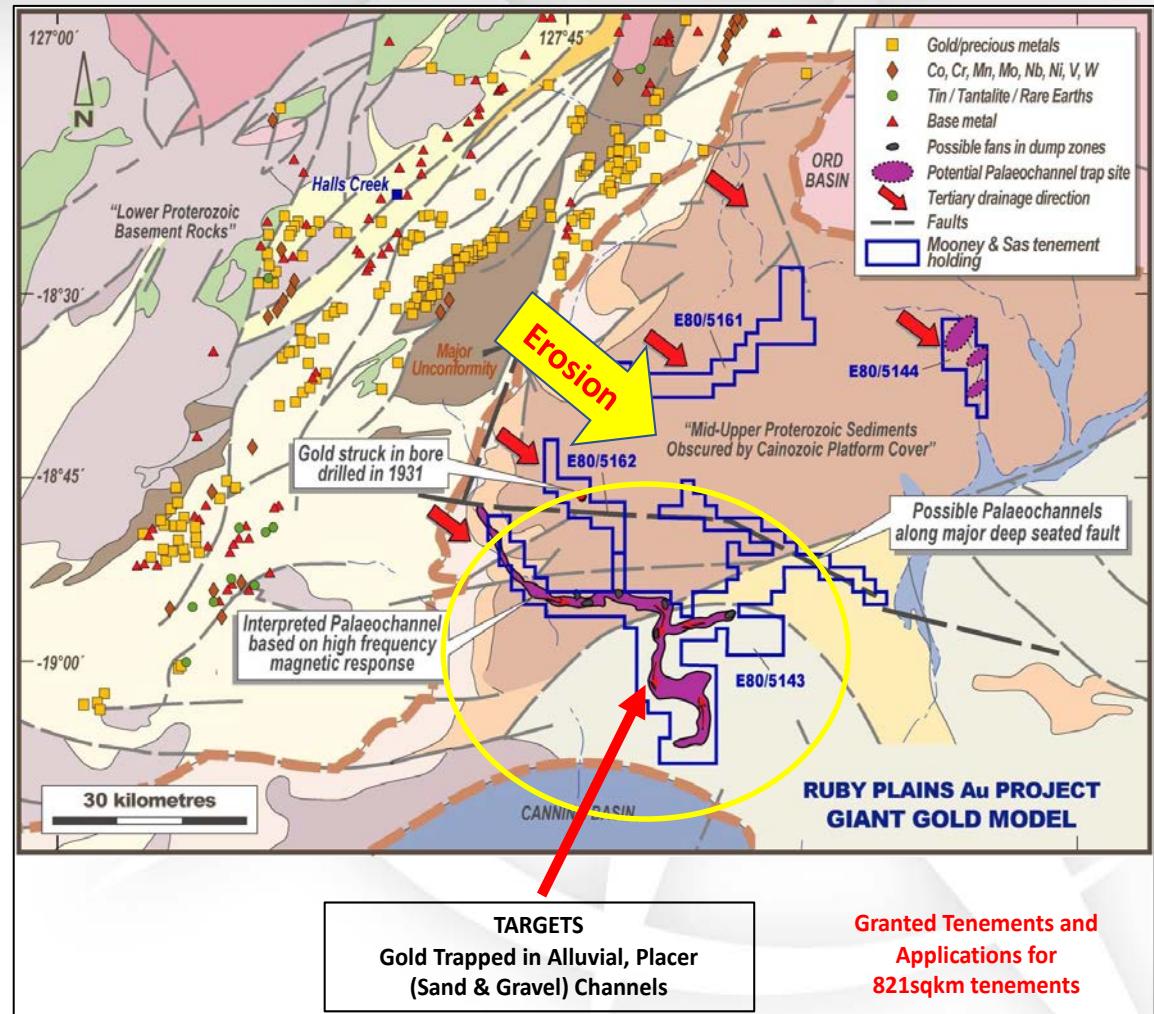

# Ruby Plains Gold Project - 100% owned

dampiergold

## The Tenements and the Target Areas

The strategic ground position covers an area with the potential to contain Plutonic gold deposits within ancient palaeo-river channels. The proposed source of gold is from the physical and chemical weathering of the auriferous Halls Creek Group during the late Cretaceous-early Tertiary period.

- ✓ Motivated team in place that is delivering on strategic targets.
- ✓ Upside in Resource growth.
- ✓ Protection of current position in Plutonic Dome Gold Project plus potential upside from enhancement of interests in K2 Gold Project.

## Summary

- ✓ Aggressive drilling campaign on world class shear zones
  - ✓ Zuleika, Carnage and Credo – large landholding in the ~20m ounce Goldfield with 34 drill-ready targets
  - ✓ Goongarrie and Menzies – grassroots exploration on untested greenstones with first results showing presence of gold and nickel

## Technical Information

# Zuleika JV Gold Project – Zuleika Shear and Carnage Shear

dampiergold

## Two world class shear zones

### Zuleika Shear

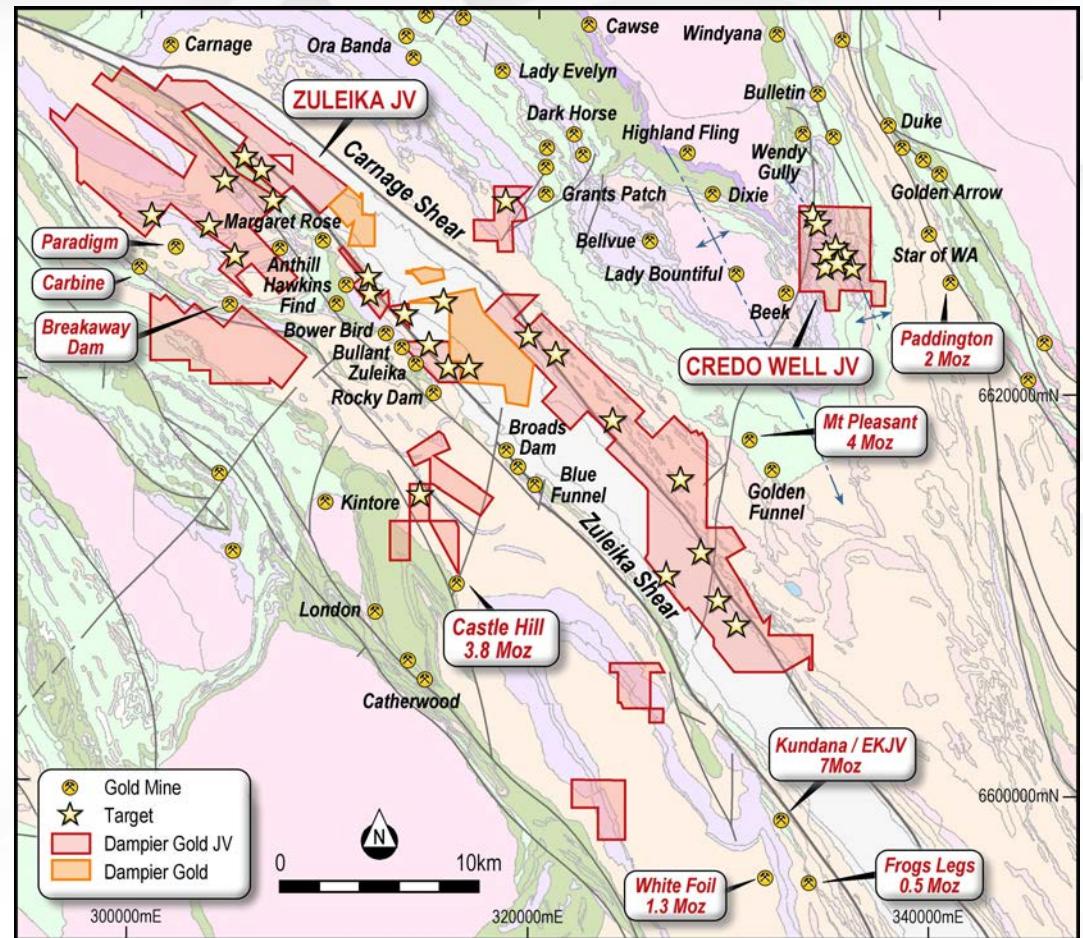

- **50km contiguous acreage** of world class gold strike in the Kalgoorlie region.
- Major crustal conduit for gold fluids.
- High grade open pit and underground potential.
- Dampier's tenements underexplored along strike and at depth.

### Carnage Shear

- **20km contiguous strike in tenements**
- Largely underexplored, splay off Zuleika and mirror image of the Zuleika.

### Both

- Dampier has identified 8 drill-ready targets which have scope to deliver early resources from first year's exploration budget (\$0.5M)

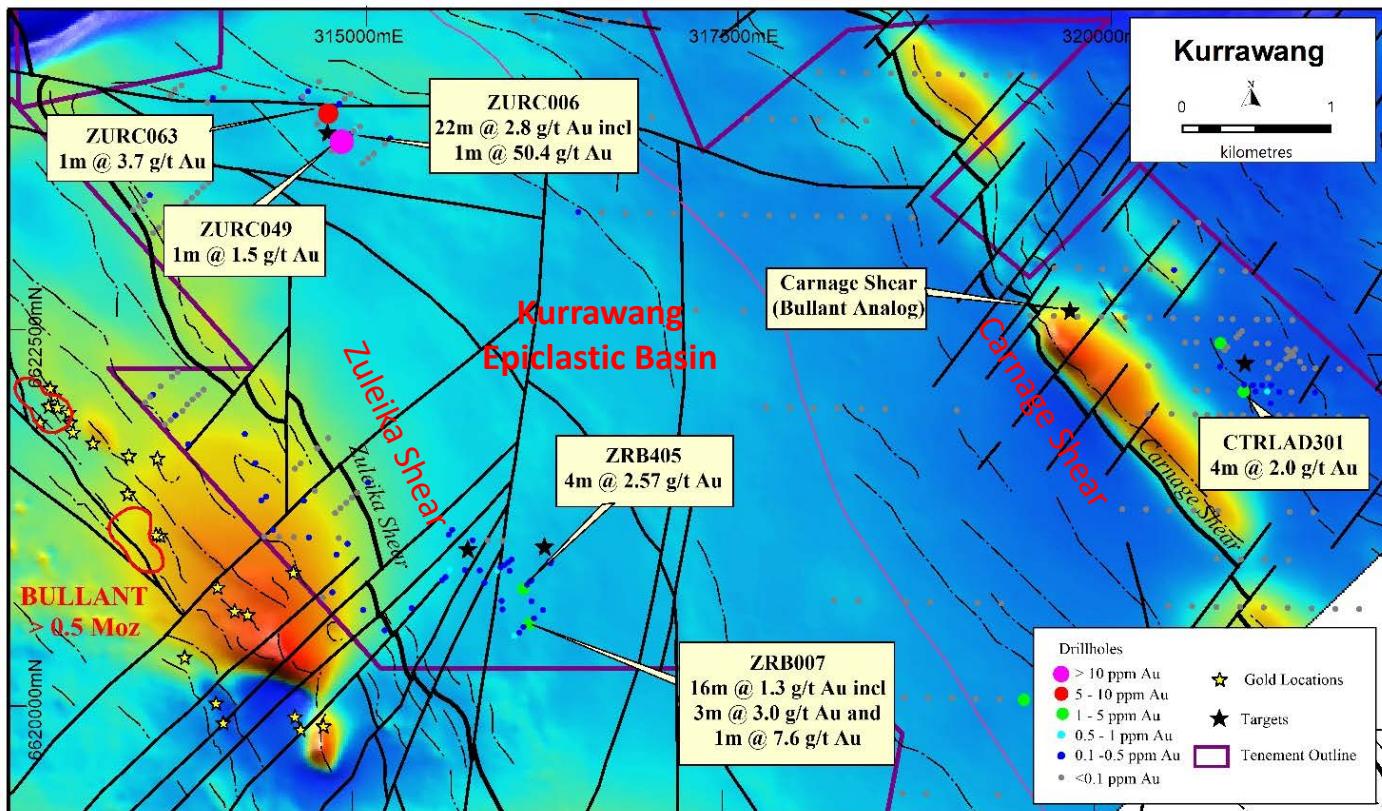

# Zuleika JV Gold Project - Kurrawang

dampiergold

**Identical mineralisation identified on each side of Kurrawang Epiclastic Basin**

- Mineralisation found in Kurrawang Formation
- Gabbros and Black Flag formation east of Carnage shear host gold mineralisation
- Mirror image of Bullant mineralisation identified on Carnage Shear side of Kurrawang basin.
- Bullant production to date >500koz

Ref: Appendix A Drilling Results, Appendix B JORC Table WAMEX Reports, DAU ASX Announcement 19 December 2019

# Zuleika JV Gold Project – Immediate drill targets

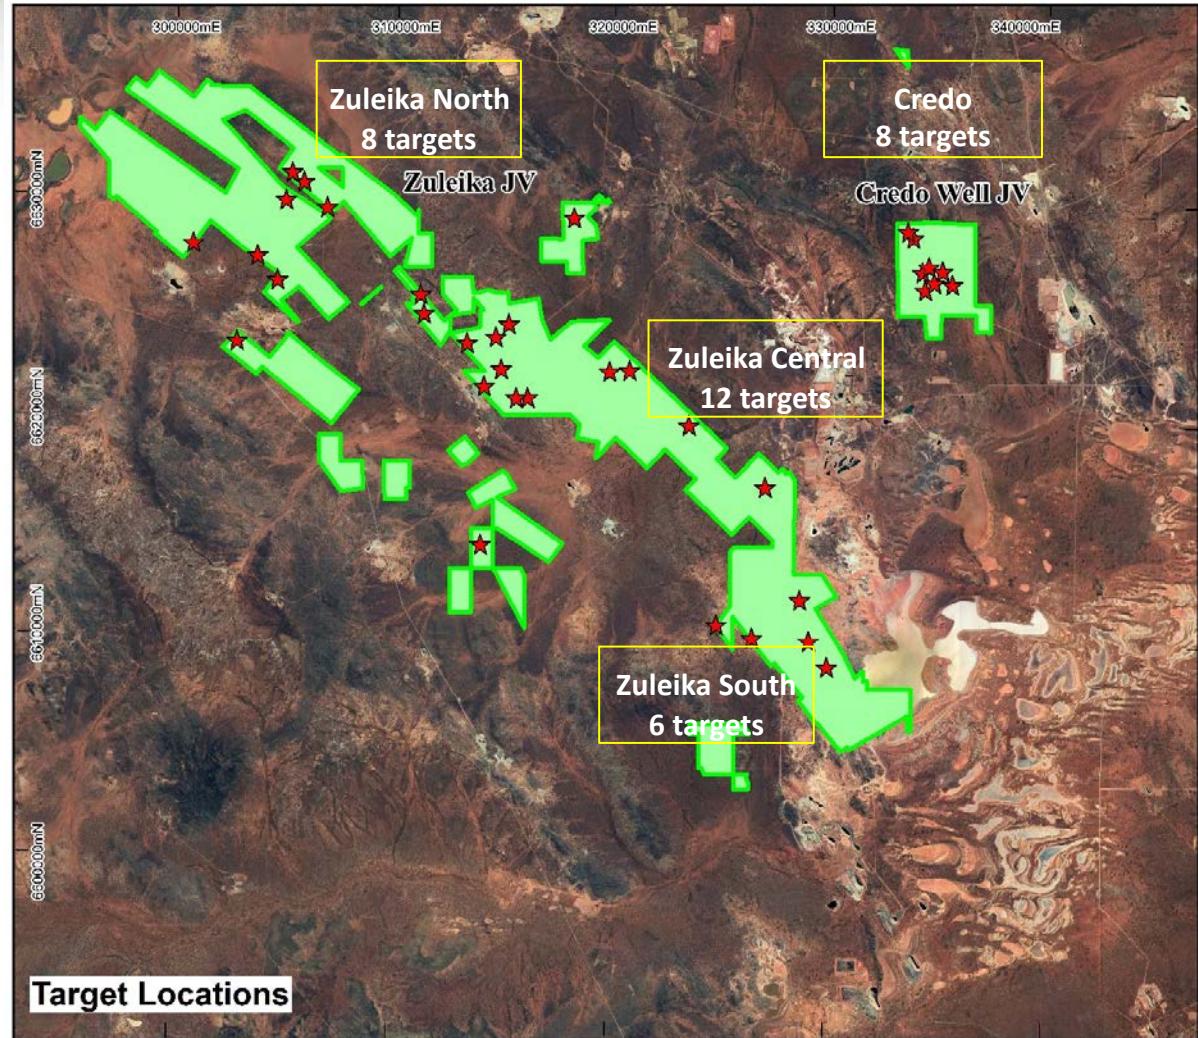

dampiergold

## 34 drill-ready gold targets

34 targets are defined based on anomalous historical drilling results:

- Zuleika North - 8 targets
- Zuleika Central - 12 targets
- Zuleika South - 6 targets
- Credo – 8 targets

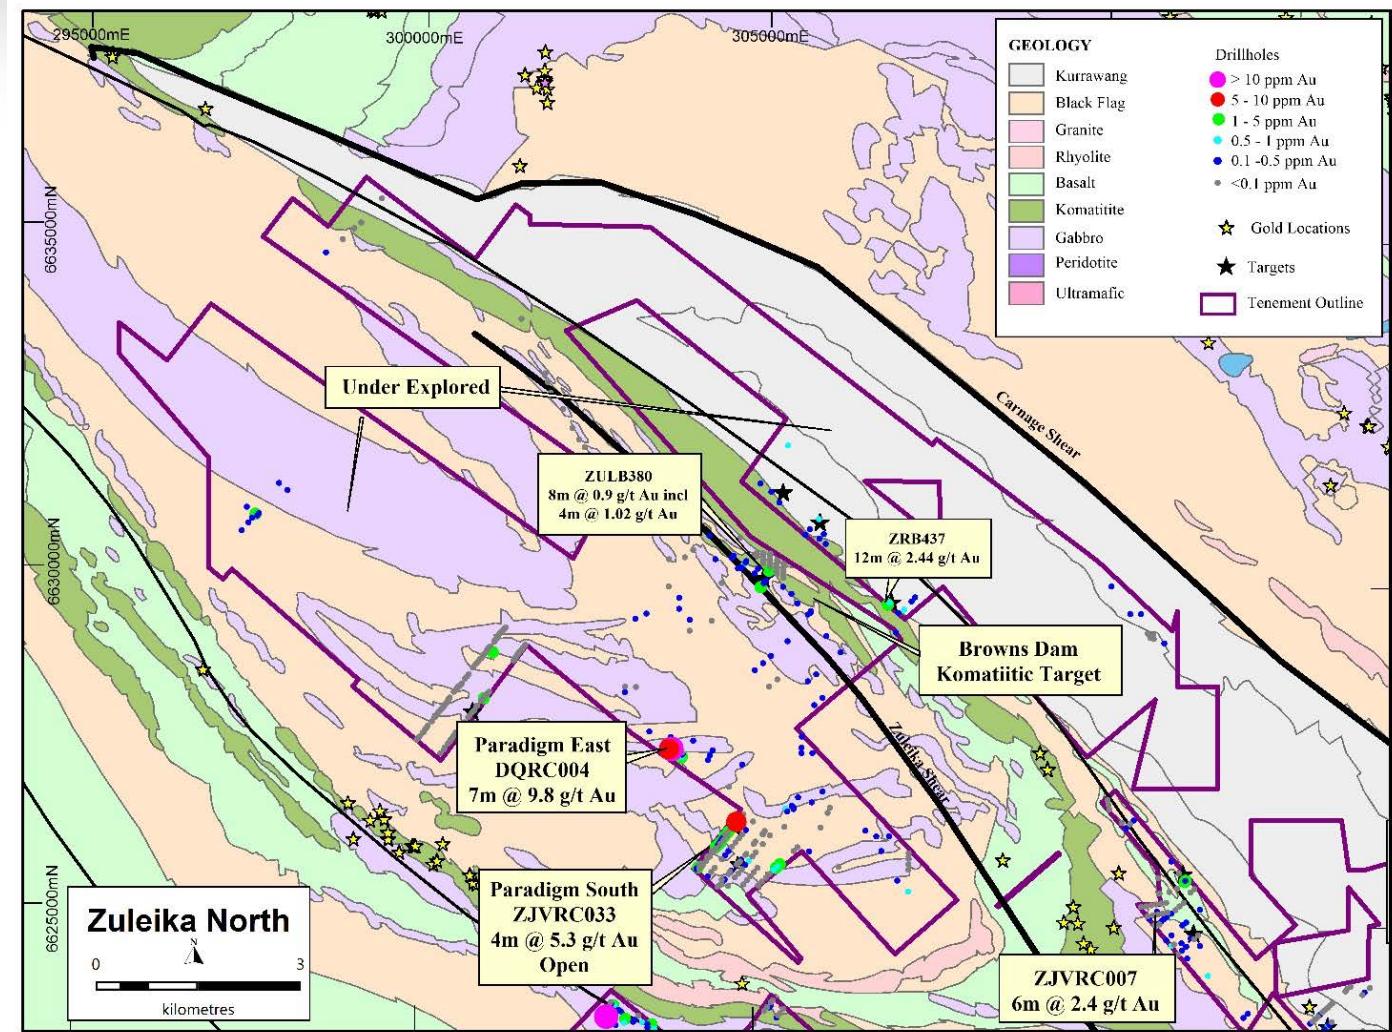

# Zuleika JV Gold Project – Zuleika North

dampiergold

## Zuleika North – priority targets from drilling and assay data

- **Browns Dam** - grade intersections including 12m @ 2.5 g/t incl. 4m @ 3.9 g/t
- **Paradigm East** - grade intersections including 7m @ 9.8 g/t incl. 2m @ 30.9 g/t
- **Paradigm South** shows mineralisation over 1km, including 4m @ 5.3 g/t

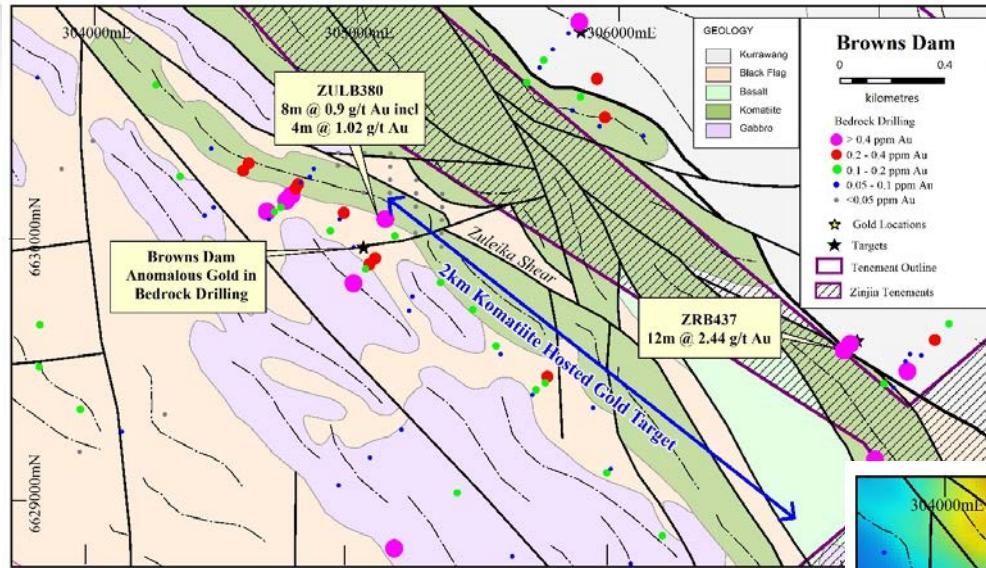

# Zuleika JV Gold Project – Browns Dam

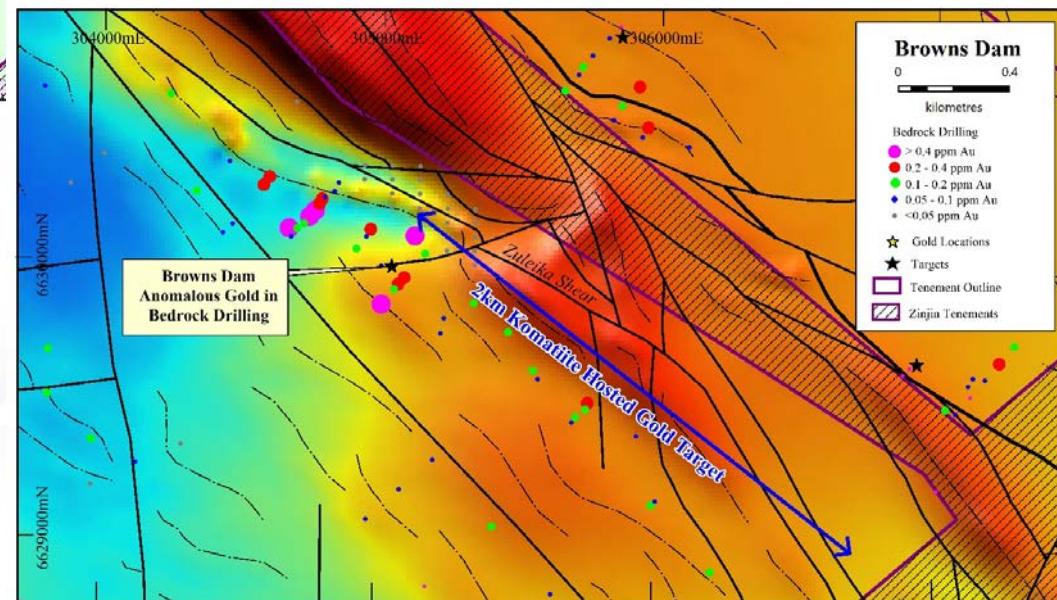

dampiergold

## Zuleika North – close up view of geology and magnetics – Browns Dam

2km Komatiite strike geology map

- Komatiite is the typical gold host
- Gold mineralization in Komatiite identified at Browns Dam from historical drilling
- Target shows Komatiite zone extends for 2km

2km Komatiite strike magnetics map

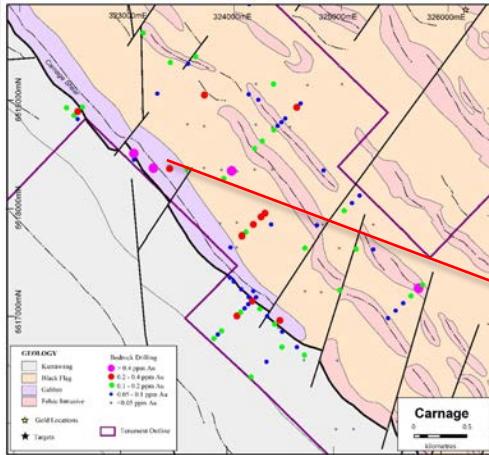

# Zuleika JV Gold Project – Black Flag Formation

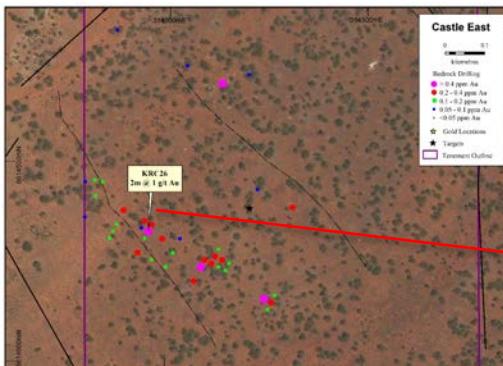

dampiergold

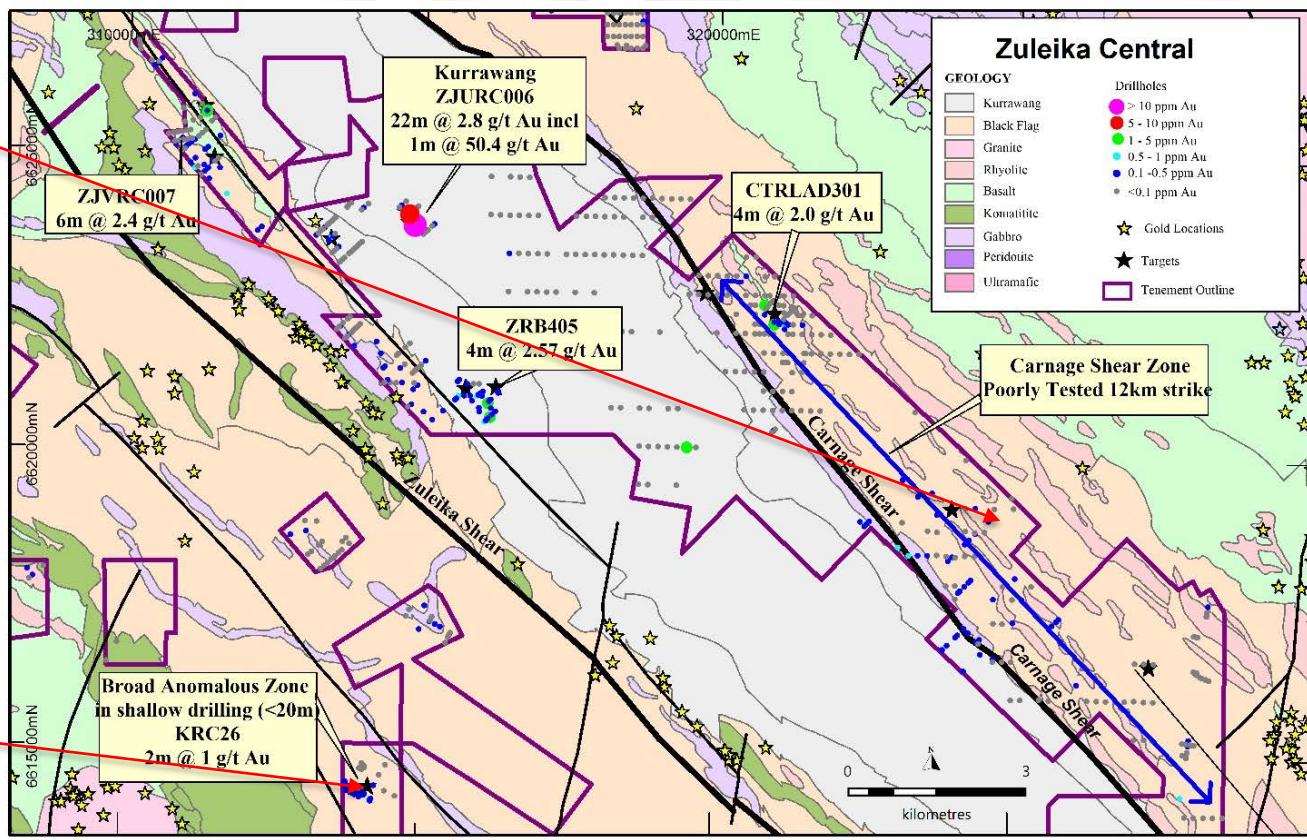

## Zuleika Central - Extensive zone of Black Flag formation proximal to Carnage Shear

Target : Anomalous gold results identified in Castle Hill East >500m strike (Castle Hill Mine – 3.8Moz)

**Target:** Anomalous gold in bedrock drilling proximal to the Carnage shear, in traverses over area of 4km x 2km (800ha). Target area is part of 12km strike of anomalous bedrock mineralisation adjacent to the shear

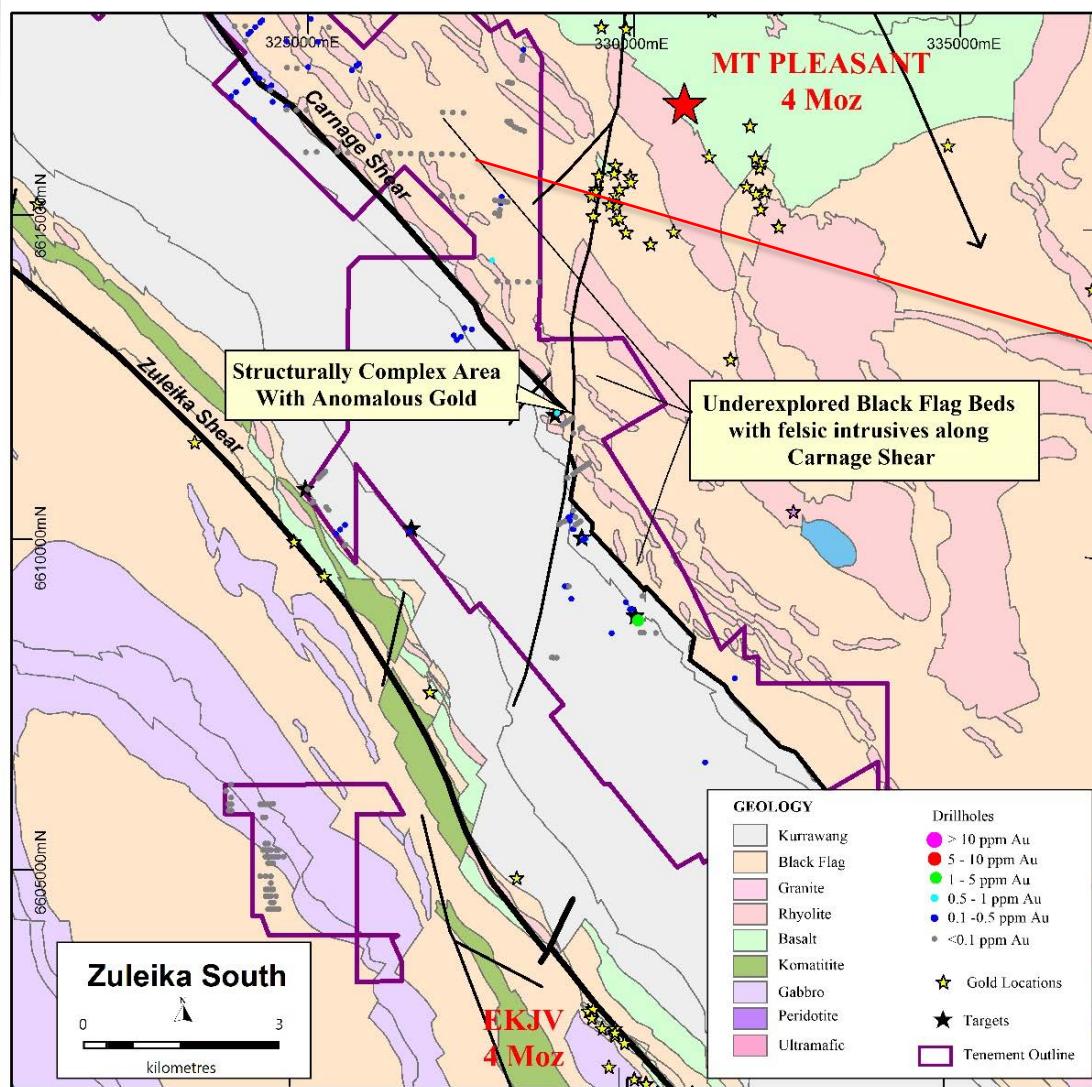

# Zuleika JV Gold Project – Zuleika South

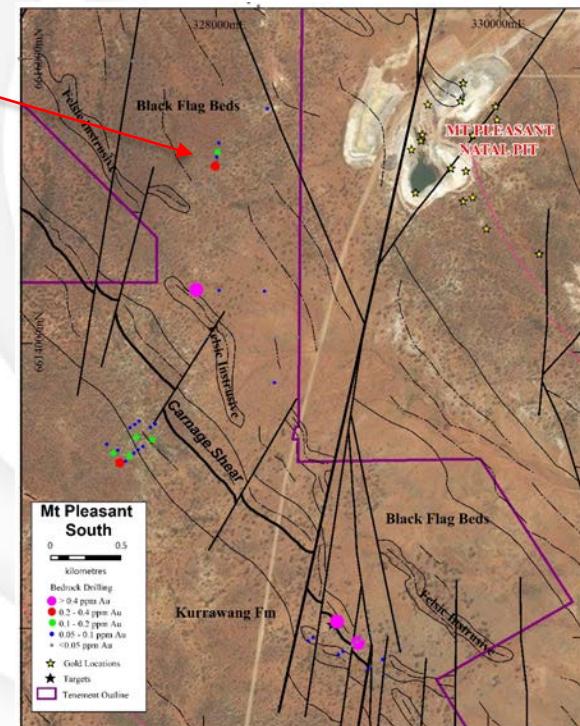

Zuleika South - intersection of Black Flag Fault and the Carnage Shear provide exciting targets

dampiergold

Target : Anomalous gold results identified in Zuleika south near Carnage shear

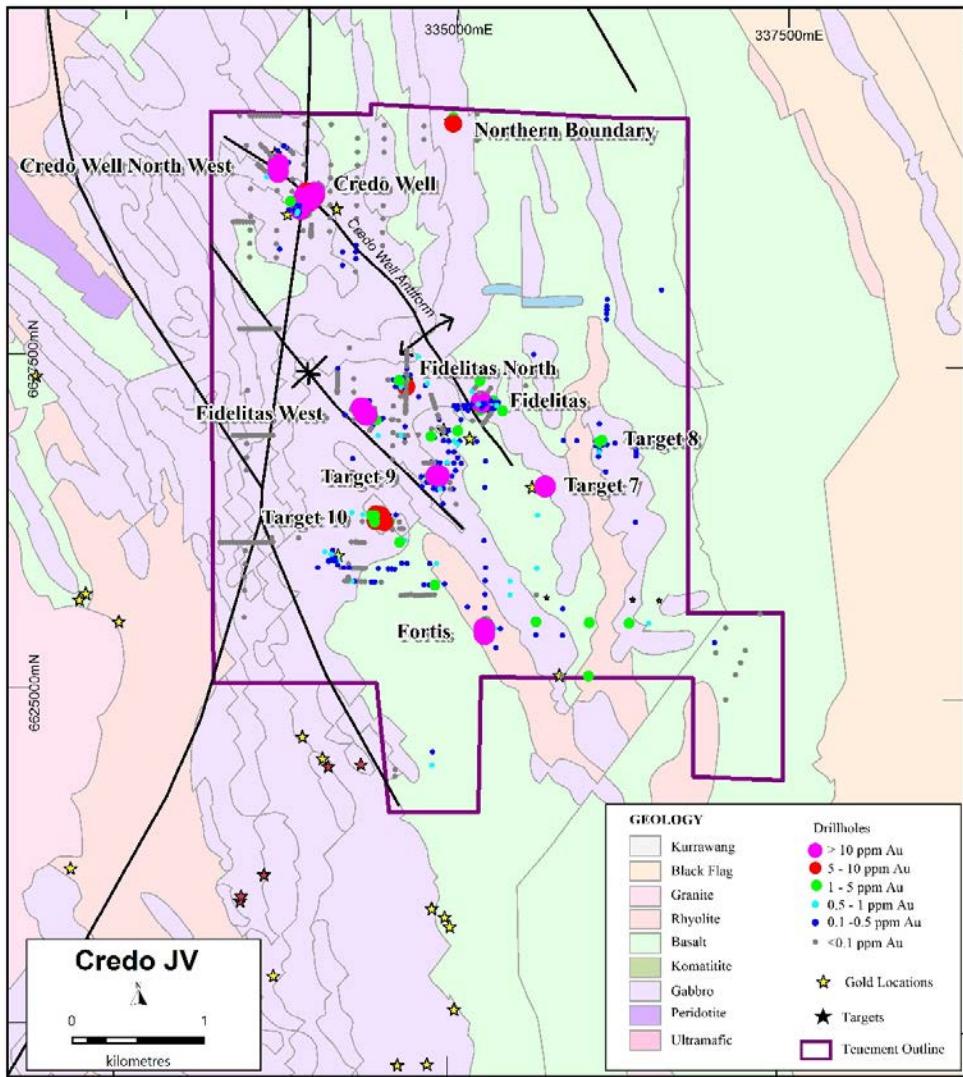

Reference: Appendix A Drilling Results, Appendix B JORC Table, DAU ASX Announcement 19 December 2019

# Credo Well JV Gold Project – Immediate Drill Targets

dampiergold

## Drill ready targets – mineralized zones

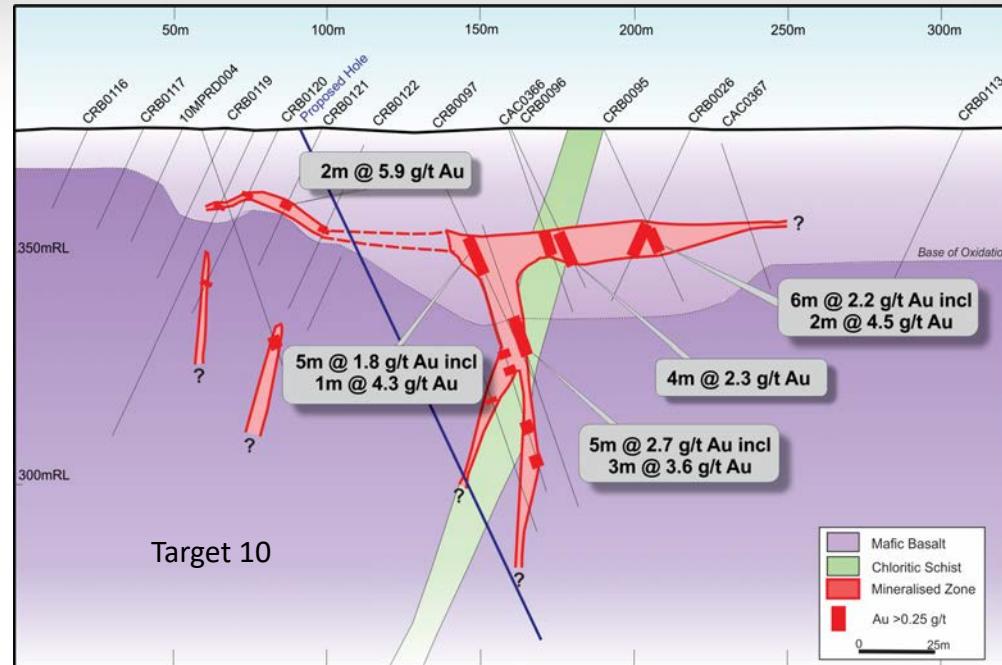

Dampier has identified from its interrogation of the Credo data base, eleven strong targets indicated in the adjacent figure which include examples of priority targets in the following sections.

# Credo Well JV Gold Project – Immediate Drill Targets

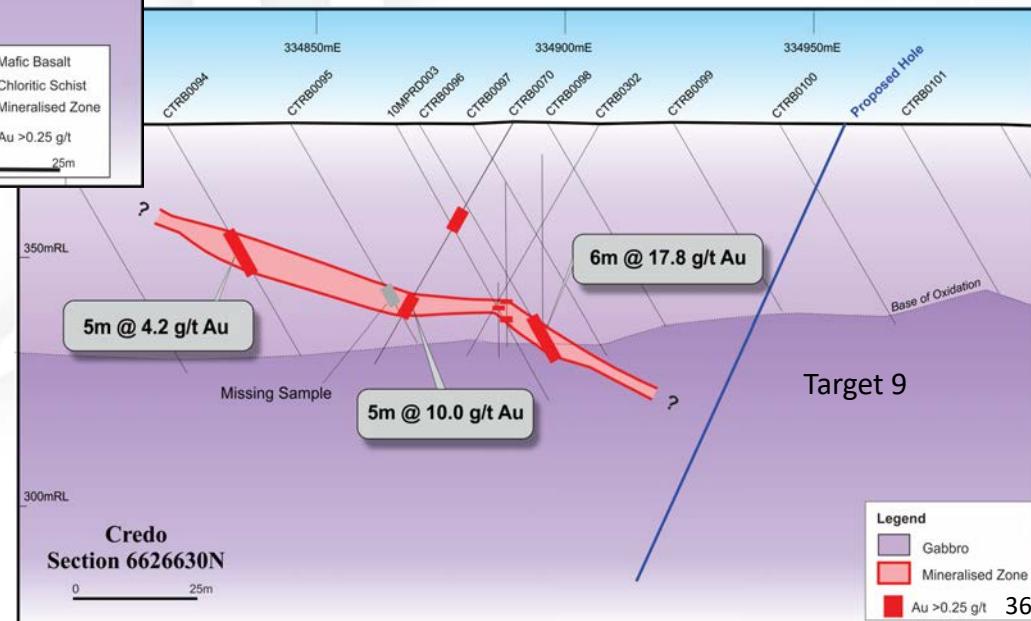

dampiergold

## EXAMPLE: Drill ready targets – mineralized zones

Complex geology provides multiple structural and lithological settings for gold mineralisation

Sections show strong supergene gold within shallow weathered zone and limited drilling targeting primary gold zones

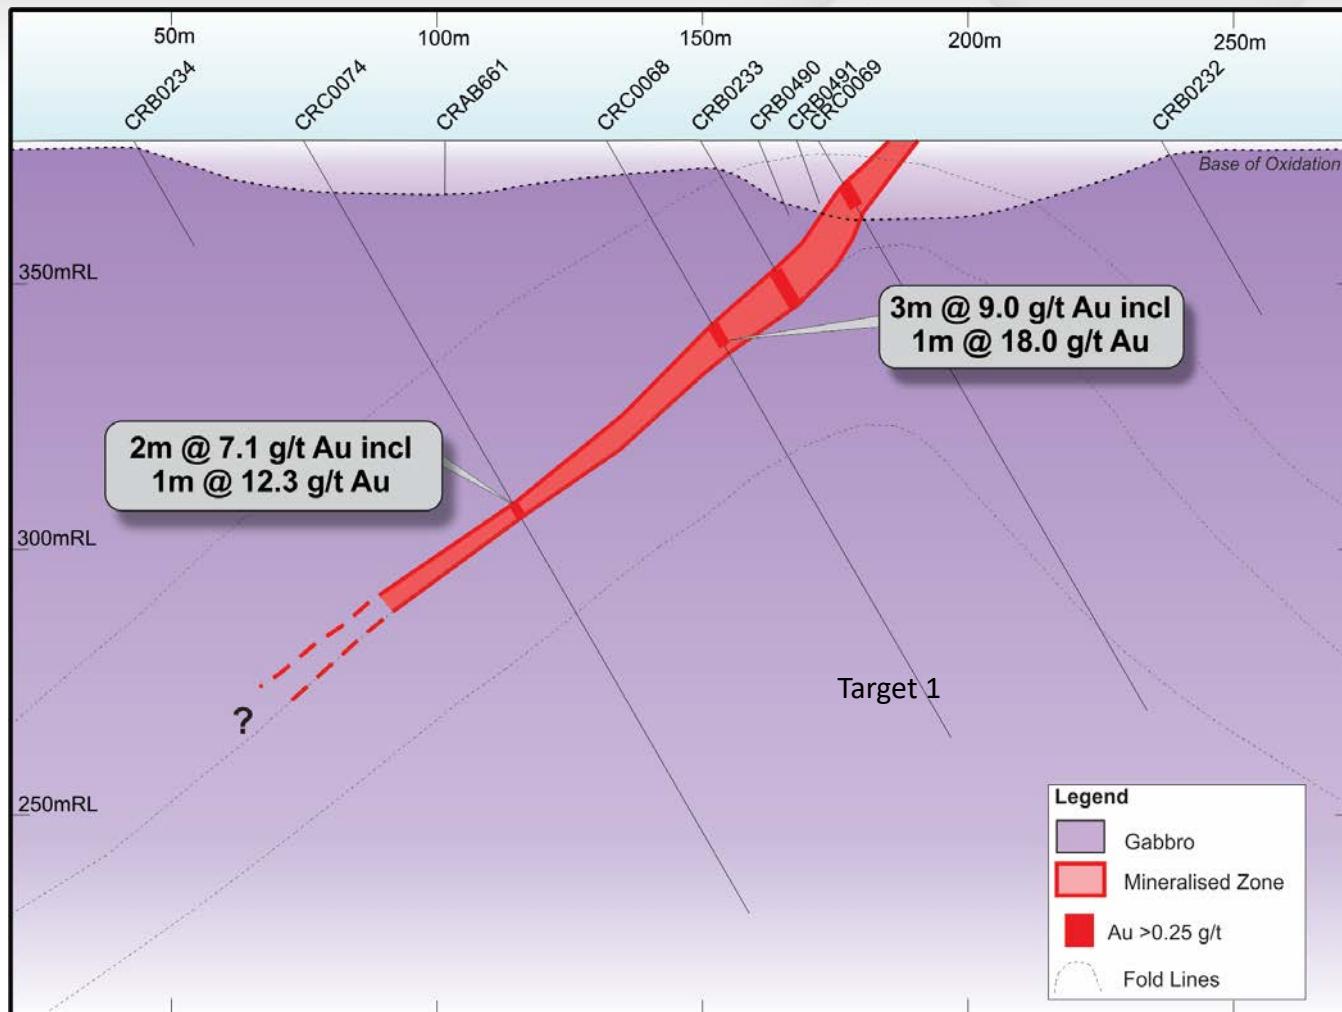

Reference: Appendix A Drilling Results, Appendix B JORC Table, , DAU ASX Announcement 19 December 2019

# Credo Well JV Gold Project – target mineralised zones

dampiergold

EXAMPLE: Drill ready targets – mineralized zones

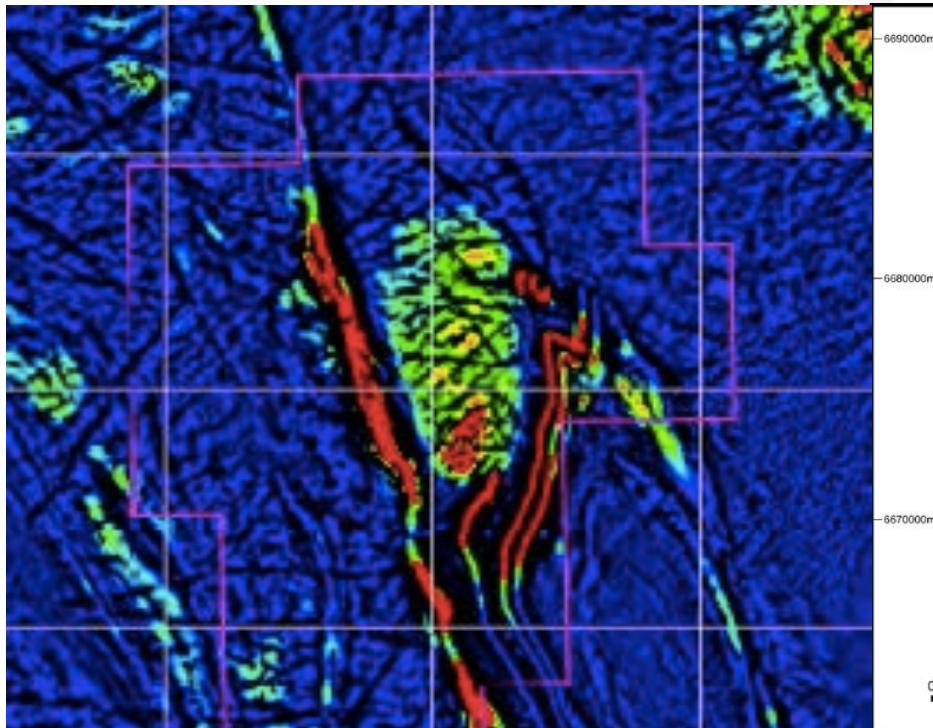

# Goongarrie Gold Project – Technical Data

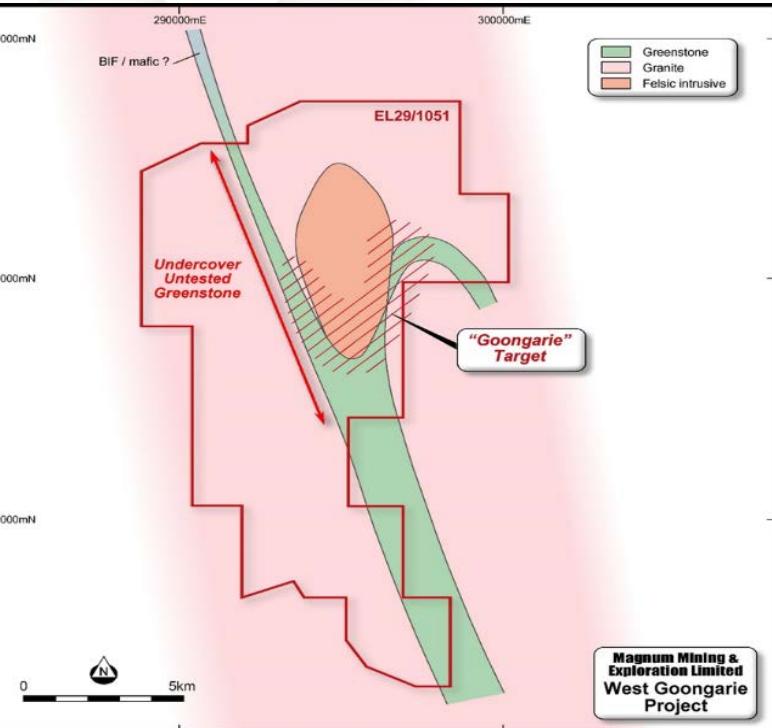

dampiergold

## Magnetics and geology

Goongarrie Tenement and Magnetics

Goongarrie “Wrap around” magnetics

Very distinct untested structure beneath sand and lake sediments. Dampier's Initial field work confirmed the presence of high Fe/Mg greenstone (mafics/ultramafics) and anomalous gold and nickel in this area.

# Goongarrie Gold Project – Recent drilling results

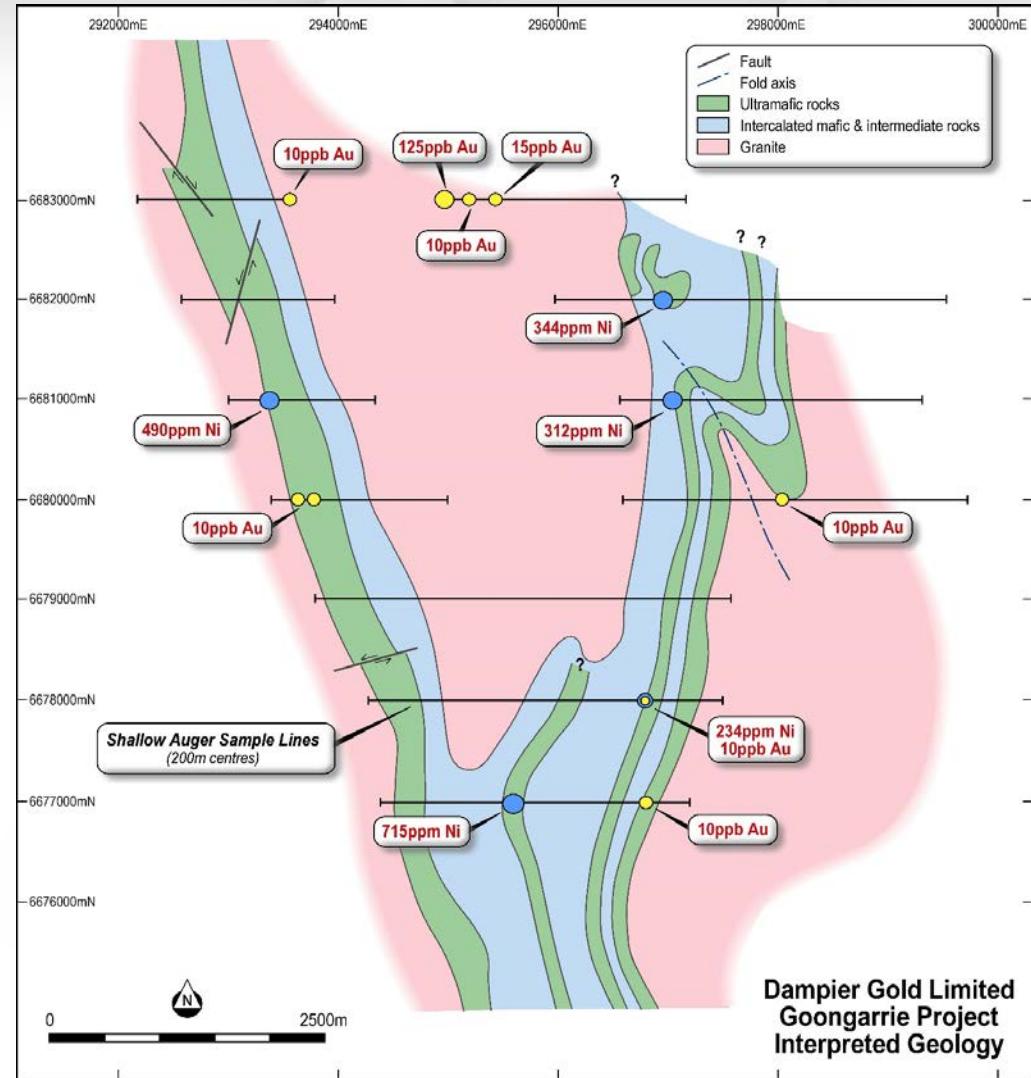

Auger drill gold results announced to ASX on 21 October 2019

dampiergold

- Goongarrie interpreted solid geology with auger soil line locations showing anomalous gold and nickel results
- Results confirm the presence of ultra-mafic/mafic and felsic rocks
- Area sand and soil covered, unexplored

JORC Tables, JORC Code, 2012 Edition

**Section 1: Sampling Techniques and Data**

**Section 2: Reporting of Exploration Results**

## JORC Code, 2012 Edition:

### Section 1: Sampling Techniques and Data

*(Criteria in this section apply to all succeeding sections.)*

Criteria	JORC Code explanation	Commentary
<i>Sampling techniques</i>	<ul style="list-style-type: none"> <li><i>Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</i></li> <li><i>Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</i></li> <li><i>Aspects of the determination of mineralisation that are Material to the Public Report.</i></li> <li><i>In cases where ‘industry standard’ work has been done this would be relatively simple (eg ‘reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay’). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</i></li> </ul>	<ul style="list-style-type: none"> <li>Results reported are from previous exploration completed by Torian Resources and historical explorers including Pan Continental Resources, Homestake, Barrick Exploration, Norton Goldfields,</li> </ul>
<i>Drilling techniques</i>	<ul style="list-style-type: none"> <li><i>Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).</i></li> </ul>	<ul style="list-style-type: none"> <li>A variety of techniques have been used, from Bedrock RAB and Aircore to Reverse circulation and NQ diamond Drilling. Standard industry techniques have been used where documented. The drilling was undertaken in a period where face sampling hammer was standard for RC drilling.</li> </ul>
<i>Drill sample recovery</i>	<ul style="list-style-type: none"> <li><i>Method of recording and assessing core and chip sample recoveries and results assessed.</i></li> <li><i>Measures taken to maximise sample recovery and ensure representative nature of the samples.</i></li> <li><i>Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.</i></li> </ul>	<ul style="list-style-type: none"> <li>Drill recovery has not been recorded on historical work.</li> </ul>
<i>Logging</i>	<ul style="list-style-type: none"> <li><i>Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.</i></li> <li><i>Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.</i></li> <li><i>The total length and percentage of the relevant intersections logged.</i></li> </ul>	<ul style="list-style-type: none"> <li>Geological logs have been examined for key prospects where available. Geological logging of regolith has occurred in most drillholes allowing interpretation of primary vs Supergene zones.</li> </ul>

Criteria	JORC Code explanation	Commentary
<i>Sub-sampling techniques and sample preparation</i>	<ul style="list-style-type: none"> <li>• If core, whether cut or sawn and whether quarter, half or all core taken.</li> <li>• If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.</li> <li>• For all sample types, the nature, quality and appropriateness of the sample preparation technique.</li> <li>• Quality control procedures adopted for all sub-sampling stages to maximise samples representivity</li> <li>• Measures taken to ensure that the sampling is representative of the <i>in situ</i> material collected, including for instance results for field duplicate/second-half sampling.</li> <li>• Whether sample sizes are appropriate to the grain size of the material being sampled.</li> </ul>	<ul style="list-style-type: none"> <li>• Standard industry practices have been undertaken but QA/QC data is not present in the historical data. It is considered that appropriate sampling and analytical methods have been used by all explorers. Some standards and blanks have been inserted into the Torian drill sampling. .</li> </ul>
<i>Quality of assay data and laboratory tests</i>	<ul style="list-style-type: none"> <li>• The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.</li> <li>• For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.</li> <li>• Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established.</li> </ul>	<ul style="list-style-type: none"> <li>• Gold assays are a combination of Aqua regia and Fire Assay. Detection limits and techniques are appropriate for included results.</li> </ul>
<i>Verification of sampling and assaying</i>	<ul style="list-style-type: none"> <li>• The verification of significant intersections by either independent or alternative company personnel.</li> <li>• The use of twinned holes.</li> <li>• Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.</li> <li>• Discuss any adjustment to assay data.</li> </ul>	<ul style="list-style-type: none"> <li>• Intercepts have been calculated generally using a 1g/t cut off and internal waste of up to 2m thickness with total intercepts greater than 1g/t.</li> </ul>
<i>Location of data points</i>	<ul style="list-style-type: none"> <li>• Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.</li> <li>• Specification of the grid system used.</li> <li>• Quality and adequacy of topographic control.</li> </ul>	<ul style="list-style-type: none"> <li>• Location of a majority of holes has been using handheld GPS, or local grids that have been converted to MGA coordinates</li> </ul>
<i>Data spacing and distribution</i>	<ul style="list-style-type: none"> <li>• Data spacing for reporting of Exploration Results.</li> <li>• Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.</li> </ul>	<ul style="list-style-type: none"> <li>• Variable across the project as shown on diagrams.</li> </ul>
<i>Orientation of data in relation to geological structure</i>	<ul style="list-style-type: none"> <li>• Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.</li> <li>• If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.</li> </ul>	<ul style="list-style-type: none"> <li>• Intercepts given are downhole widths with the true widths not determined.</li> </ul>

Criteria	JORC Code explanation	Commentary
<i>Sample security</i>	<ul style="list-style-type: none"> <li>• <i>The measures taken to ensure sample security.</i></li> </ul>	<ul style="list-style-type: none"> <li>• Not applicable to historical data review</li> </ul>
<i>Audits or reviews</i>	<ul style="list-style-type: none"> <li>• <i>The results of any audits or reviews of sampling techniques and data.</i></li> </ul>	<ul style="list-style-type: none"> <li>• Review of data in key areas has been undertaken with ongoing QA/QC on the remainder of the data within the project areas being ongoing.</li> </ul>

## Section 2: Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
<i>Mineral tenement and land tenure status</i>	<ul style="list-style-type: none"> <li><i>Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.</i></li> <li><i>The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.</i></li> </ul>	<ul style="list-style-type: none"> <li>Located in the Norseman - Wiluna Greenstone Belt ~35km northwest of Kalgoorlie in the Eastern Goldfields mining district in WA</li> <li>All granted tenements held and maintained by Torian Resources Limited and are in good standing.</li> <li>Dampier Mining Ltd have the opportunity to earn up to 50% in the Credo Well Project Tenements and up to 75% in the Zuleika Project Tenements through expenditure over 4 years of \$A2M and \$A4M respectively</li> </ul>
<i>Exploration done by other parties.</i>	<ul style="list-style-type: none"> <li><i>Acknowledgment and appraisal of exploration by other parties.</i></li> </ul>	<ul style="list-style-type: none"> <li>Extensive previous work by Pan Continental Resources, Homestake, Barrack Exploration, Norton Goldfields</li> <li>Data compiled from: WAMEX reports listed following this table<sup>1</sup></li> </ul>
<i>Geology</i>	<ul style="list-style-type: none"> <li><i>Deposit type, geological setting and style of mineralisation.</i></li> </ul>	<ul style="list-style-type: none"> <li>Gold mineralisation at Credo and Zuleika projects is orogenic, hosted within sheared and faulted Volcanics, Sediments, felsic, mafic and ultramafic rocks. Mineralisation is hosted in shear zones and controlled by regional structures</li> </ul>
<i>Drill hole Information</i>	<ul style="list-style-type: none"> <li><i>A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:</i> <ul style="list-style-type: none"> <li><i>easting and northing of the drill hole collar</i></li> <li><i>elevation or RL (Reduced Level - elevation above sea level in metres) of the drill hole collar •</i></li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>Location of Drillholes based on historical reports and data, originally located on GPS.</li> <li>Northing and easting data generally within 10m accuracy</li> <li>RL data +/-20m</li> <li>Down hole length =+- 0.2 m</li> </ul>

Criteria	JORC Code explanation	Commentary
	<p style="text-align: center;"><i>dip and azimuth of the hole</i></p> <ul style="list-style-type: none"> <li>▪ <i>down hole length and interception depth</i></li> <li>▪ <i>hole length.</i></li> </ul> <ul style="list-style-type: none"> <li>• <i>If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.</i></li> </ul>	
<i>Data aggregation methods</i>	<ul style="list-style-type: none"> <li>• <i>In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.</i></li> <li>• <i>Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail. The assumptions used for any reporting of metal equivalent values should be clearly stated.</i></li> </ul>	<ul style="list-style-type: none"> <li>• Intercepts have been calculated generally using a 1g/t cut off and internal waste of up to 2m thickness with total intercepts greater than 1g/t.</li> <li>• No upper cut off has been applied to intersections.</li> </ul>
<i>Relationship between mineralisation widths and intercept lengths</i>	<ul style="list-style-type: none"> <li>• <i>These relationships are particularly important in the reporting of Exploration Results.</i> <ul style="list-style-type: none"> <li>• <i>If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.</i></li> <li>• <i>If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known').</i></li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>• Orientation of mineralised zones are still to be ascertained</li> </ul>
<i>Diagrams</i>	<ul style="list-style-type: none"> <li>• <i>Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</i></li> </ul>	<ul style="list-style-type: none"> <li>• The data has been presented using appropriate scales and using standard aggregating techniques for the display of regional data. Geological and mineralisation interpretations are based on current knowledge and will change with further exploration.</li> </ul>
<i>Balanced reporting</i>	<ul style="list-style-type: none"> <li>• <i>Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.</i></li> </ul>	<ul style="list-style-type: none"> <li>• All results have previously been reported by Torian – see TNR:ASX Announcements dated: 10/7/2018, 03/05/2018, 25/07/2017, 07/03/2017, 04/02/2017, 02/12/2015.</li> </ul>

Criteria	JORC Code explanation	Commentary
<i>Other substantive exploration data</i>	<ul style="list-style-type: none"> <li>• <i>Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.</i></li> </ul>	<ul style="list-style-type: none"> <li>• Geological interpretations are taken from published maps, historical and ongoing exploration. Many of the prospects are at an early exploration stage and further work will enhance the understanding of the area.</li> </ul>
<i>Further work</i>	<ul style="list-style-type: none"> <li>• <i>The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling).</i></li> <li>• <i>Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.</i></li> </ul>	<ul style="list-style-type: none"> <li>• Further work currently underway is a full project review identifying and ranking targets</li> <li>• Drill testing of these targets is planned as soon as practical following the finalisation of the JV.</li> </ul>
