

Global certification secured for blind controller

ASX RELEASE

15 January 2020

Highlights

- Quantify Technology's blind controller hardware has passed global safety certification testing which is a critical step towards global product sales.
- The blind controller is Quantify's third device to receive global CB Scheme Certification, alongside the dimmer and GPO hardware.

Quantify Technology Holdings Limited (ASX:QFY) ("**Quantify Technology**", the "**Company**") is pleased to announce that its intelligent blind controller hardware device has passed compliance and been issued certification, meeting global safety standards.

This news builds on previous announcements released in 2019, which stated Quantify's dimmer¹ and GPO² devices had received CB Scheme Certification, following their success in passing global safety certification testing.

The certification for the blind controller means the product is now available for sale as an additional smart home product in Quantify's range, alongside the qDimmer (the smart connected dimmer switch) and qPower (the smart connected power point). The blind controller, also known as the qBlind, is Quantify's smart connected blind control device which has capabilities to automate and control blinds in the home.

Having the qBlind available to the market will assist Quantify in its aim to maximise sales both domestically and internationally (in participating CB Scheme Certification countries, including Australia, China, the EU and the US).

Quantify Technology CEO, Brett Savill, commented: "As we roll out, we face new demands for products and product variations. The qBlind provides an important new area for us to add value to customer's homes. This global safety standards certification is therefore another step forward in our commercialisation."

About Quantify Technology

Quantify Technology is an Australian-based company, focused on making lives better in homes, workplaces, and communities with their Internet of Things (IoT) smart home technology. Their qDevices replace standard power outlets and light switches and can be controlled by voice, app and touch. Quantify has the opportunity to be the first truly mass-market smart home product because of its simplicity, the innovative nature of its technology, and its limitless platform. Its strategic priorities are to maximise sales domestically, secure distribution internationally and strengthen its platform.
