## Zambia pillar update: Large anomaly with 6km strike identified at Luanshya project

- A comprehensive soil sampling program at the Luanshya project, which has so far resulted in 913 data points being analysed, has delivered a standout result:
  - ❖ A sizeable new anomalous area, with a 6km strike length, has been defined
- Significantly, the newly identified anomalous area coincides with a previously identified NW-SE trend-line, that is ~5-10km wide in places and intersects the Luanshya project, which is known to host copper mineralisation
- Notably, two of Hong Kong listed China Nonferrous Mining Corp's (CNMC) (HKSX: 1258) three operating copper mines in the region, are circa 7km NW of the anomaly on the same trendline. CNMC's Proven & Probable JORC (2012) Reserves are 52.3mt @ 1.26% Cu<sub>1</sub>
- In terms of underlying geology, a significant part of the Luanshya project anomaly, which was identified in the field using a portable XRF analyser, falls in the mica schists that is similar to the malachite bearing series in CNMC's two mines
- Given this highly encouraging start to the exploration campaign at the Luanshya project, the team will finish up mapping key targets ahead of a planned geophysics survey which would then enable test-drill targets to be identified
- Finally, with the Luanshya project's proximity to CNMC's three operating mines, there is clearly adequate supporting mining and transportation infrastructure

+++

**Castillo Copper's Managing Director Simon Paull commented:** "From our earlier understanding of the Luanshya project, which is located in the Zambian Copperbelt, we were expecting to find surface mineralisation aligned with the NW-SE trendline. However, defining a sizeable anomalous zone along a 6km strike well exceeded the Board's expectations. The next phase of the exploration campaign for the Mkushi and Luanshya projects comprises ground geophysics surveys which should enable the geology team to formulate test-drill targets."

**CCZ's London based Director Ged Hall remarked:** "It's extremely encouraging to see that comprehensive soil sampling campaigns to the Mkushi and Luanshya projects have delivered significant anomalous areas for copper mineralisation. We are now clearly on the path to transforming CCZ into a mid-tier copper group."

**Castillo Copper Limited (“CCZ” or “the Company”)** is delighted to announce that a copper-focused soil sampling exercise at the Luanshya project in Zambia, which is a sub-component of a comprehensive exploration campaign, identified a sizeable new anomalous area along a 6km strike length.

## NEW ANOMALOUS AREA AT LUANSHYA PROJECT

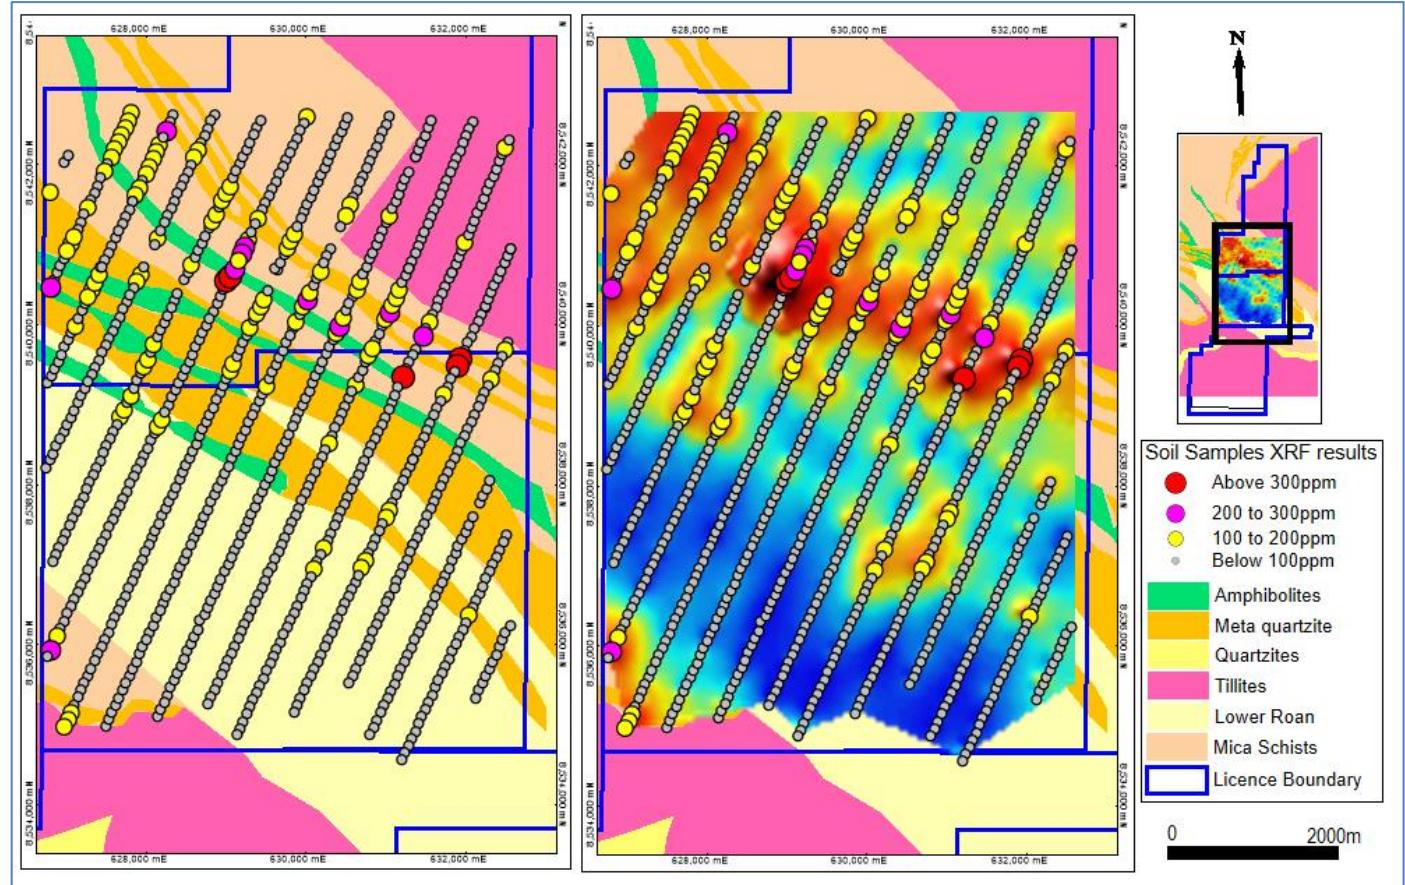

### 6km strike

CCZ’s in-country geology team has progressed a systematic soil sampling campaign at the Luanshya project, which followed on from earlier desktop work and a two-day site visit. So far, 913 data points have been collected from a NE-SW grid with lines spaced 500m part and samples at 100m.

Field analysis, using a portable Innovx XRF analyser, identified a sizeable well-defined NW-SE trending anomalous area, with 6km strike length. Moreover, 15 samples returned copper values >200ppm at surface.

To place this in context, Figure 1 highlights the XRF results which are superimposed on the underlying geology and overlayed with the generated anomalous geochemical target.

**FIGURE 1: GENERATED ANOMALOUS GEOCHEM TARGET, XRF RESULTS & GEOLOGY**

Source: CCZ geology team

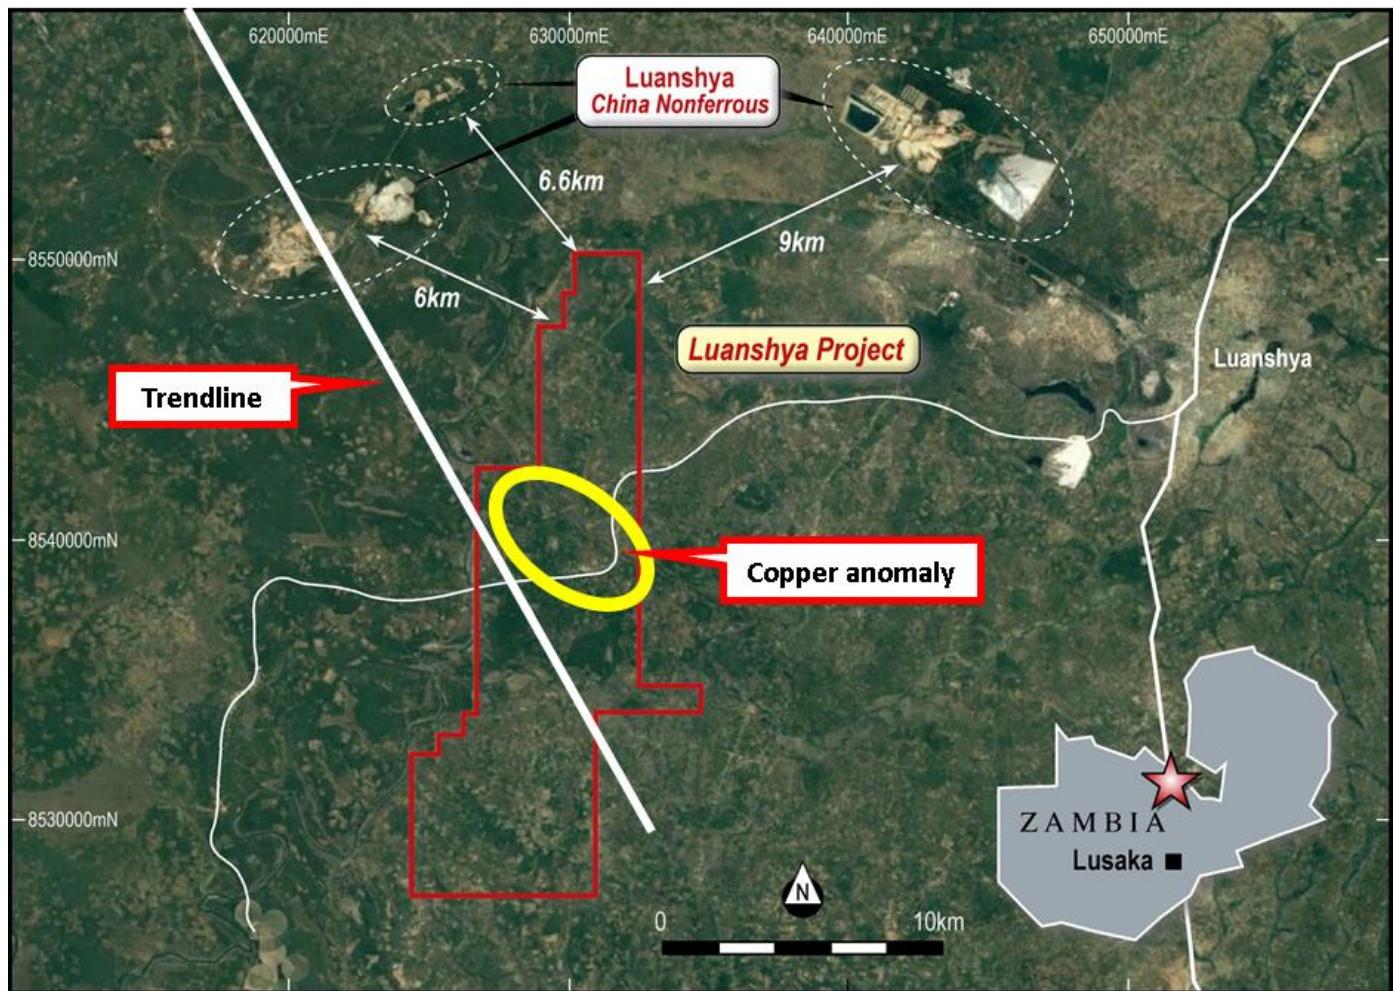

The geology team, who are still at site finishing up mapping key targets for a planned geophysics survey, observed there was no evidence of previous exploration work within the anomalous zone. Further, given its close proximity to operating copper mines, the Luanshya project is readily accessible and near to existing mining / transportation infrastructure.

## Regional trendline

Earlier desktop work by CCZ's in-country geology team highlighted four regional trendlines, circa 5-10km wide in places, running NW-SE that are known to host copper mineralisation. The anomalous area and two of CNMC's three operating copper mines are on the same trendline that intersects the Luanshya project (Figure 2).

More significantly, in terms of the underlying geology, the anomalous area falls in the mica schists which is similar to the malachite bearing series in CNMC's two mines. According to CNMC's December 2018 annual report, its three mines in the Luanshya region have Proven & Probable JORC (2012) Reserves at 52.3mt @ 1.26% Cu1.

**FIGURE 2: IDENTIFIED ANOMALY IN RELATION TO OPERATING COPPER MINES**

Source: CCZ geology team

## Next steps

With anomalous zones identified at the Mkushi and Luanshya projects, the next steps are to conduct geophysics survey, reconcile the results with geochemical findings, then formulate test-drill targets.

**Simon Paull**

**Managing Director**

#### **Competent Person Statement**

The information on the page that relates to Exploration Results for the Luanshya Project is based on information compiled or reviewed by Mr Matt Bull, a Director of Castillo Copper Limited. Mr Bull is a member of the Australian Institute of Geoscientists and has sufficient experience of relevance to the styles of mineralisation and types of deposits under consideration, and to the activities undertaken, to qualify as a Competent Person as defined in the 2012 Edition of the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Bull consents to the inclusion in this report of the matters based on information in the form and context in which it appears.

The Australian Securities Exchange has not reviewed and does not accept responsibility for the accuracy or adequacy of this release

#### **ABOUT CASTILLO COPPER**

Castillo Copper Limited (ASX: CCZ) is a base metal explorer primarily focused on copper then zinc & nickel.

The group is embarking on a strategic transformation to morph into a mid-tier copper group underpinned by three core pillars:

- **Pillar I:** The Mt Oxide project in the Mt Isa copper-belt district, north-west Queensland, which delivers significant exploration upside through having several high-grade targets and a sizeable untested anomaly within its boundaries in a copper-rich region.
- **Pillar II:** Four high-quality prospective assets across Zambia's copper-belt which is the second largest copper producer in Africa.
- **Pillar III:** Cangai Copper Mine in northern New South Wales, which is one of Australia's highest grading historic copper mines.

In addition, Castillo Copper is progressing a dual listing on the Standard Board of the London Stock Exchange.

**APPENDIX A: TABLE 1 – THE FOLLOWING TABLES ARE PROVIDED TO ENSURE COMPLIANCE WITH JORC CODE (2012) REQUIREMENTS FOR EXPLORATION RESULTS FOR THE LUANSHYA PROJECT IN ZAMBIA**

**Section 1: Sampling Techniques and Data to update**

(Criteria listed in the preceding section also apply to this section)

Criteria	JORC Code explanation	Commentary
<i>Sampling techniques</i>	<ul style="list-style-type: none"> <li><i>Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</i></li> <li><i>Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</i></li> <li><i>Aspects of the determination of mineralisation that are Material to the Public Report.</i></li> <li><i>In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</i></li> </ul>	<ul style="list-style-type: none"> <li>No drilling reported in this release.</li> <li>Portable XRF analysis of soils is done by handheld field portable INNOVX XRF analyser. Samples are analysed for up 40 seconds in geochem mode. Analysis is used as an indication of tenor of mineralisation and not absolute value.</li> <li>Soil samples are analysed on site base camp by the XRF, the soil samples were collected from the depth of 30m.</li> </ul>
<i>Drilling techniques</i>	<ul style="list-style-type: none"> <li><i>Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).</i></li> </ul>	<ul style="list-style-type: none"> <li>No drilling reported in this release.</li> </ul>
<i>Drill sample recovery</i>	<ul style="list-style-type: none"> <li><i>Method of recording and assessing core and chip sample recoveries and results assessed.</i></li> <li><i>Measures taken to maximise sample recovery and ensure representative nature of the samples.</i></li> <li><i>Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.</i></li> </ul>	<ul style="list-style-type: none"> <li>No drilling reported in this release.</li> </ul>
<i>Logging</i>	<ul style="list-style-type: none"> <li><i>Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.</i></li> </ul>	<ul style="list-style-type: none"> <li>General landform and sample medium is recorded for each sample.</li> </ul>

Criteria	JORC Code explanation	Commentary
	<ul style="list-style-type: none"> <li>Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.</li> <li>The total length and percentage of the relevant intersections logged.</li> </ul>	<ul style="list-style-type: none"> <li>No logging reported in this release.</li> <li>No drilling reported in this release.</li> </ul>
Sub-sampling techniques and sample preparation	<ul style="list-style-type: none"> <li>If core, whether cut or sawn and whether quarter, half or all core taken.</li> <li>If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.</li> <li>For all sample types, the nature, quality and appropriateness of the sample preparation technique.</li> <li>Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.</li> <li>Measures taken to ensure that the sampling is representative of the in-situ material collected, including for instance results for field duplicate/second-half sampling.</li> <li>Whether sample sizes are appropriate to the grain size of the material being sampled.</li> </ul>	<ul style="list-style-type: none"> <li>No drilling reported in this release.</li> </ul>
Quality of assay data and laboratory tests	<ul style="list-style-type: none"> <li>The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.</li> <li>For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.</li> <li>Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established.</li> </ul>	<ul style="list-style-type: none"> <li>Soil samples are analysed by a field Portable handheld INNOVX xrf analyser</li> <li>The XRF reading time is 40 seconds.</li> <li>The XRF is Calibrated on start and end of the sample stream analysis.</li> <li>For Cu which is reported in this release the XRF detection limit is approximately 9ppm with an accuracy of 3 to 5ppm.</li> <li>Duplicate samples were collected every 30 samples.</li> <li>A range of certified Portable XRF standards and blanks were tested at approximately 30 samples.</li> </ul>
Verification of sampling and assaying	<ul style="list-style-type: none"> <li>The verification of significant intersections by either independent or alternative company personnel.</li> </ul>	<ul style="list-style-type: none"> <li>Due to the early stage of exploration no verification of significant results has been completed at this time.</li> </ul>
	<ul style="list-style-type: none"> <li>The use of twinned holes.</li> </ul>	<ul style="list-style-type: none"> <li>No drilling reported in this release.</li> </ul>
	<ul style="list-style-type: none"> <li>Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.</li> </ul>	<ul style="list-style-type: none"> <li>All data is digitally recorded in the company's electronic database.</li> </ul>
	<ul style="list-style-type: none"> <li>Discuss any adjustment to assay data.</li> </ul>	<ul style="list-style-type: none"> <li>No adjustments to the data.</li> </ul>

	<ul style="list-style-type: none"> <li>Data spacing for reporting of Exploration</li> </ul>	<ul style="list-style-type: none"> <li>Soil sample traverse are regionally spaced at</li> </ul>

Criteria	JORC Code explanation	Commentary
Data spacing and distribution	Results.	from 500m lines and sample spacing along the line was approximately 100m.
	<ul style="list-style-type: none"> <li>Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.</li> </ul>	<ul style="list-style-type: none"> <li>Sample spacing is appropriate for regional exploration results</li> </ul>
Orientation of data in relation to geological structure	<ul style="list-style-type: none"> <li>Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.</li> <li>If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.</li> </ul>	<ul style="list-style-type: none"> <li>Sample lines were orientated approximately perpendicular to the main strike of the geology striking SW-NW.</li> </ul>
Sample security	<ul style="list-style-type: none"> <li>The measures taken to ensure sample security.</li> </ul>	<ul style="list-style-type: none"> <li>Soil samples were shipped at to the field camp using the hired car, driven by company personnel.</li> </ul>
Audits or reviews	<ul style="list-style-type: none"> <li>The results of any audits or reviews of sampling techniques and data.</li> </ul>	<ul style="list-style-type: none"> <li>No audits or reviews undertaken.</li> </ul>

## Section 2: Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section)

Criteria	JORC Code explanation	Commentary
Mineral tenement and land tenure status	<ul style="list-style-type: none"> <li>Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.</li> </ul>	<ul style="list-style-type: none"> <li>The tenements referred to in this release are 25195-HQ-LEL owned by Belmt Resources Mining Company Ltd and 22448-HQ-LEL owned by Forward Chimbia Limited.</li> <li>25195-HQ-LELwas granted on 17/09/2019 and has a lifetime of 4 years.and 22448-HQ-LEL was granted on 03/01/2019 and has a lifetime of 4 years.</li> </ul>
	<ul style="list-style-type: none"> <li>The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.</li> </ul>	<ul style="list-style-type: none"> <li>The tenements are secure under Zambian Mining laws.</li> </ul>
Exploration done by other parties	<ul style="list-style-type: none"> <li>Acknowledgment and appraisal of exploration by other parties.</li> </ul>	<ul style="list-style-type: none"> <li>There is no exploration done in the area know to Castillo Copper.</li> </ul>

Criteria	JORC Code explanation	Commentary
<i>Geology</i>	<ul style="list-style-type: none"> <li>• <i>Deposit type, geological setting and style of mineralisation.</i></li> </ul>	<ul style="list-style-type: none"> <li>❖ The licences number 25195-HQ-LEL and 22448-HQ-LEL are located in 23km West of Luanshya district and 31km South of Kitwe..</li> <li>❖ The area is characterized by presence of banded, granulitic and porphyroblastic gneisses, quartzo-feldspathic schist, quartzites and metavolcanics forming the Basement Complex collectively referred to as the Luanshya Gneiss Formation.</li> <li>❖ This formation is characterised by pink or grey, coarse grained migmatitic, granitoids gneisses of largely unknown protolith. The gneisses posses various textural attributes which include fine-grained banded gneisses and coarse porphyroblastic, granite gneisses which cover large areas.</li> <li>❖ The Luanshya Formation is intruded by gabbroic, doleritic and amphibolitic rocks including aplites, pegmatites and quartz veins that carry gold, copper, managanese and various gemstones.</li> <li>❖ The area is dominated by structurally controlled copper malachite mineralization</li> </ul>

Criteria	JORC Code explanation	Commentary
Drill hole Information	<ul style="list-style-type: none"> <li>• A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:           <ul style="list-style-type: none"> <li>➢ easting and northing of the drill hole collar</li> <li>➢ elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar</li> <li>➢ dip and azimuth of the hole</li> <li>➢ down hole length and interception depth</li> <li>➢ hole length.</li> </ul> </li> <li>• If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.</li> </ul>	<ul style="list-style-type: none"> <li>• No drill results reported.</li> </ul>
Data aggregation methods	<ul style="list-style-type: none"> <li>• In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.</li> <li>• Where aggregate intercepts incorporate short lengths of high-grade results and longer lengths of low-grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail</li> </ul>	<ul style="list-style-type: none"> <li>• No drill results reported.</li> <li>• No averaging or sample aggregation has been conducted.</li> </ul>
	<ul style="list-style-type: none"> <li>• The assumptions used for any reporting of metal equivalent values should be clearly stated.</li> </ul>	<ul style="list-style-type: none"> <li>• No metal equivalents used.</li> </ul>
Relationship between mineralisation widths and intercept lengths	<ul style="list-style-type: none"> <li>• These relationships are particularly important in the reporting of Exploration Results.</li> <li>• If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.</li> <li>• If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg ‘down hole length, true width not known’).</li> </ul>	<ul style="list-style-type: none"> <li>• No drill results reported.</li> </ul>
Diagrams	<ul style="list-style-type: none"> <li>• Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</li> </ul>	<ul style="list-style-type: none"> <li>• See main body of this release.</li> </ul>

Criteria	JORC Code explanation	Commentary
<i>Balanced reporting</i>	<ul style="list-style-type: none"> <li>Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.</li> </ul>	<ul style="list-style-type: none"> <li>The reporting is considered balanced.</li> </ul>
<i>Other substantive exploration data</i>	<ul style="list-style-type: none"> <li>Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.</li> </ul>	<ul style="list-style-type: none"> <li>There is no any other exploration data available for the area that this report is written for.</li> </ul>
<i>Further work</i>	<ul style="list-style-type: none"> <li>The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling).</li> </ul>	<ul style="list-style-type: none"> <li>Early stage exploration and follow-up of identified Cu, anomalies including additional interpretation of data, reviews and assessments of regional targets and infill geochemical sampling of ranked anomalies in preparation for future drill testing.</li> </ul>
	<ul style="list-style-type: none"> <li>Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.</li> </ul>	<ul style="list-style-type: none"> <li>Refer to figures in this report.</li> </ul>
