

28<sup>th</sup> MAY 2020

## **OKLO'S SK1 TREND GROWS TO 3KM FOLLOWING FURTHER SIGNIFICANT HITS FROM SK1 NORTH, SK1 SOUTH & KOKO**

**Oklo Resources Limited** ("Oklo" or "the Company") is pleased to report further highly encouraging results from the resource definition drilling program currently in progress at its flagship Dandoko Project located in west Mali, Africa.

### **HIGHLIGHTS**

- ▶ Assay results received from 17 reverse circulation (RC) and 7 diamond (DD) holes from SK1 North and SK1 South at Seko.
- ▶ At **SK1 North**, further wide zones of gold mineralisation returned from step-out drilling at depth and along strike. Significant intersections include:
  - ▶ **33m at 2.95g/t gold** from 115m including;
    - ▶ **20m at 4.17g/t gold** from 128m
  - ▶ **20m at 2.09g/t gold** from 179m including;
    - ▶ **7m at 4.20g/t gold** from 180m
  - ▶ **31m at 1.14g/t gold** from 3m including;
    - ▶ **10m at 2.65g/t gold** from 4m, and
  - ▶ **10m at 2.32g/t gold** from 152m including;
    - ▶ **3m at 6.18g/t gold** from 159m
  - ▶ **12m at 2.40g/t gold** from 66m including;
    - ▶ **3m at 5.59g/t gold** from 69m
- ▶ At **SK1 South**, optimised drilling orientation reveals potential for new south-plunging shoot. Significant results include:
  - ▶ **17m at 2.81g/t gold** from 65m including;
    - ▶ **4m at 8.03g/t gold** from 71m
  - ▶ **6m at 7.27g/t gold** from 25m including;
    - ▶ **2m at 19.35g/t gold** from 25m
  - ▶ **21m at 1.74g/t gold** from 136m including;
    - ▶ **10m at 2.97g/t gold** from 136m
  - ▶ **4m at 11.45g/t gold** from 7m including;
    - ▶ **1m at 41.0g/t gold** from 8m
- ▶ Drilling planned to target inadequately tested ~500m gap between SK1 North and SK1 South for further shoot development.
- ▶ 250m step out AC drill traverses south of SK1 South return significant gold including **5m at 10.7g/t gold**.

- ▶ Limited follow-up RC drilling at Koko located ~2km south of SK1 South intersects more significant gold mineralisation including:
  - ▶ **58m at 1.14g/t gold** from 3m and **3m at 2.48g/t gold** from 89m
  - ▶ **9m at 1.10g/t gold** from 45m with the hole ending in mineralisation
- ▶ Assay results received from wide-spaced shallow aircore (AC) between Koko and SK1 South outlines several anomalous gold zones with individual grades up to **5.31g/t gold**.
- ▶ The RC and DD drilling programs at SK1 are ongoing with more RC and DD holes completed awaiting assay results.
- ▶ Oklo remains well-funded to advance this compelling phase of drilling at SK1, which will continue up to the onset of the wet season (expected in July) with delivery of the maiden Mineral Resource Estimate (MRE) now expected during 2H 2020.

*"We are pleased to report these new assay results from SK1, which highlight the potential for further shoot development along the ~3km trend extending from SK1 North to Koko. In particular, the results from SK1 South point to a new shoot emerging following implementation of the more optimal northwest drill hole orientation which brought about the SK1 North discovery. We are becoming increasingly confident that the drilling planned along the SK1 trend in the lead up to the wet season will deliver further open pittable oxide mineralisation to Oklo's maiden MRE, expected to be finalised during 2H 2020."* - commented Oklo's Managing Director, Simon Taylor.

**Oklo Resources Limited** ("Oklo" or "the Company") is pleased to report the receipt of further assay results from its drilling program over Seko and Koko within the Company's flagship Dandoko Project.

Oklo's Dandoko Project is located within the Kenieba Inlier of west Mali, approximately 30km east of B2Gold's 7.1Moz Fekola Project and 50km south-southeast of Barrick's 12.5Moz Loulo Project (Figure 1(a)). The Company currently holds ~500km<sup>2</sup> of highly prospective ground in this emerging world-class gold region.

Extensive gold anomalies have previously been outlined by auger drilling along the 12km-long Dandoko gold corridor (Figure 1(b)). The potential of this corridor to host large, gold mineralised systems has been demonstrated by the recent drilling success at Seko and several other nearby prospect areas.

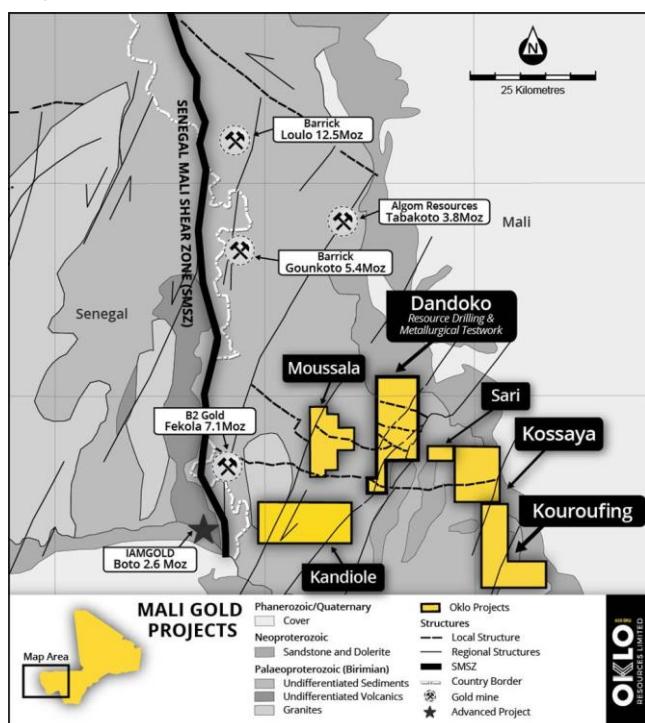

Figure 1(a): Location of Oklo's gold projects in west Mali.

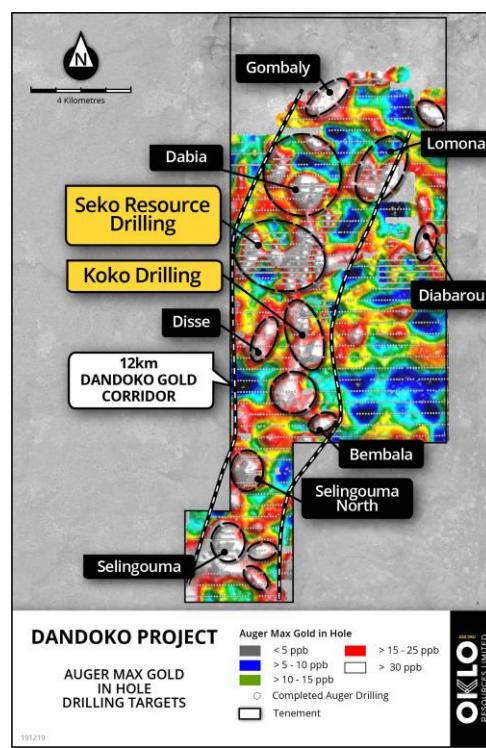

Figure 1(b): Location of Seko and Koko gold trends within the Dandoko gold corridor

Oklo's current field program is focused on infill drilling and closing off previously defined zones of gold mineralisation at Seko and adjoining areas in advance of its maiden MRE. Seko comprises five coherent auger gold trends (SK1-5) with a combined strike length of ~7km.

The evaluation of the recent SK1 North discovery and exploration for potential extensions to SK1 South is ongoing with the latest round of drill results reported in this announcement. Additionally, assay results are reported from follow-up RC drilling at Koko and shallow reconnaissance aircore (AC) drilling between Koko and Seko. The significant drill hole intersections are summarised in Tables 1, 2, 5 and 6 with all drill hole locations summarised in Table 3 and 4 graphically presented in Figures 2 to 10.

## SK1 NORTH

The initial phase of drilling at SK1 North in late 2019 returned a spectacular intersection of 47m at 10.95g/t gold from 48m<sup>1</sup>, following which Oklo's Board approved additional RC drilling to test this emerging zone of high-grade gold mineralisation.

The follow-up drilling returned further exceptional intersections including 55m at 7.65g/t gold from 54m, 51m at 4.28g/t gold from 63m, 31m at 7.12g/t gold from 30m and 29m at 2.46g/t gold from 51m.<sup>2</sup>

A series of step-out DD holes testing the down-dip continuity of the high-grade gold mineralisation successfully intersected 30m at 8.54g/t gold from 135m<sup>3</sup> and 38m at 5.65g/t gold from 159m<sup>4</sup> in the deepest holes and 34m at 4.07g/t gold from 83m<sup>5</sup> immediately along strike.

Assay results received from an additional 7 DD holes and 11 RC holes at SK1 North are reported in this release. The latest assay results have successfully extended the high-grade gold mineralisation at depth on several sections.

Of particular note in the north of SK1 North, hole RDSK20-072 intersected **33m at 2.95g/t gold** from 115m downhole, including **20m at 4.17g/t gold** from 128m downhole (Section D, Figure 5).

More shallow drill testing above this zone intersected a wide zone of near surface gold mineralisation in hole RCSK20-224, returning **31m at 1.14g/t gold** from 3m downhole including **10m at 2.65g/t gold** from 4m and a second deeper zone of **6m at 3.71g/t gold** from 45m (including **2m at 10.50g/t gold** from 48m).

Two DD holes drilled to the immediate north (RDSK20-073) and south (RDSK20-071) of hole RDSK20-072 intersected further zones of gold mineralisation at varying depths. Hole RDSK20-073 returned **16m at 1.71g/t gold** from 78m (including **5m at 3.72g/t gold**), with hole RDSK20-071 intersecting **4m at 3.65g/t gold** from 124m. A RC hole (RCSK20-228) completed 80m to the north of hole RDSK20-072 intersected **10m at 1.82g/t gold** from 26m, including **3m at 4.60g/t gold**.

Four step-out RC holes (RCSK20-219 to RCSK20-222) completed at the northern end of SK1 North intersected anomalous mineralisation in hole RCSK20-220 (**18m at 0.30g/t gold**) indicating that the host structure continues northwards towards Dabia.

In the central portion of SK1 North, DD hole RDSK20-075 intersected **20m at 2.09g/t gold** from 179m, including **7m at 4.20g/t gold** (Section E, Figure 6). A deeper DD hole (RDSK20-076) has recently been completed to a total depth of 360m with assay results pending.

In the south of SK1 North, DD hole RDSK20-069 intersected **10m at 2.32g/t gold** from 152m, including **3m at 6.18g/t gold**. RC holes RCSK20-226 and RCSK20-227 returned **12m at 2.40g/t gold** from 66m, including **3m at 5.59g/t gold**, and **21m at 1.29g/t gold** from 102m respectively.

Based on the results received to date, SK1 North remains open at depth with modelling indicating a southerly plunge to the high-grade mineralisation. Drilling is continuing both down dip and along strike to the north.

<sup>4</sup> Refer ASX announcement 1<sup>st</sup> April 2020, "SK1 North Confirmed Over 500m Includes 32m at 10.57g/t Gold"

<sup>5</sup> Refer ASX announcement 25<sup>th</sup> February 2020, "SK1 Continues to Grow Along Strike And At Depth"

**SK1 SOUTH**

Assay results have been received from 6 RC holes completed at SK1 South designed to test for an easterly dipping control to the mineralisation, similar in style to SK1 North.

All 6 holes (RCSK20-230 to 235) were oriented to the northwest and successfully intersected gold mineralisation with apparent easterly dip and plunge to the south (Figures 7 and 8).

Significant intersections included: **6m at 7.27g/t gold** from 25m (including **2m at 19.35g/t gold**) and **11m at 1.49g/t gold** from 127m (including **5m at 2.28g/t gold**) in hole RCSK20-231; **17m at 2.81g/t gold** from 65m (including **4m at 8.03g/t gold**) in hole RCSK20-232; **4m at 11.45g/t gold** from 7m (including **1m at 41.0 g/t gold**) and **14m at 1.18g/t gold** from 113m in hole RCSK20-234; and **21m at 1.74g/t** from 136m gold (including **10m at 2.97g/t gold**) from 136m in hole RCSK20-235.

The Company considers the new SK1 South results to be highly significant both in terms of the emergence of a new south-plunging shoot and the potential of the ~500m gap between SK1 North and SK1 South for further shoot development about some of the previously reported isolated drill intersections.

Intervals are reported using a threshold where the interval has a 0.3g/t Au average or greater over the sample interval and selects all material greater than 0.10g/t Au allowing for up to two samples of included dilution every 10m. Note that hole RDSK20-075 has been calculated using three samples of included dilution. Sampling was completed as 1m for DD/RC/AC drilling. \* hole ended in mineralisation

## KOKO – SK1 TREND RECONNAISSANCE DRILLING

The 2km zone extending from SK1 to Koko has been tested by a series of wide-spaced AC traverses comprising of 160 holes to an average down hole depth of 62m (50m vertical).

Numerous zones of anomalous gold mineralisation were intersected as shown in Figure 2, with peak grades of up to **5.31g/t gold**, that warrant follow-up drilling.

Importantly step out drill traverses 250m from Sk1 South intersected significant gold mineralisation including **5m at 10.7g/t gold**, **6m at 1.71g/t gold** and **5m at 1.24 g/t gold**. The mineralised intervals show coherent easterly dipping zones similar in style to the recent success at SK1 North and SK1 South. The Company is highly encouraged by these initial results with potential to extend the SK1 structure to the south towards Koko, a combined total length of 3 km.

### KOKO

The Koko prospect is located ~2km south of Seko (Figure 2) and was identified from Oklo's reconnaissance auger drilling program that successfully outlined the 12km-long Dandoko gold corridor (Figure 1(b)).

Oklo previously reported significant intersections from wide-spaced reconnaissance AC and first pass RC drilling over this prospect including: 5m at 2.82g/t gold from 49m; 5m at 2.27g/t gold from 14m; 44m at 1.37g/t gold from 33m; and 35m at 1.00g/t gold from 19m<sup>6</sup>. A second phase of follow-up RC drilling returned: 37m at 3.24g/t gold from 11m (including 12m at 5.14g/t gold from 15m); 4m at 7.48g/t gold from 37m; 29m at 3.52g/t gold from 36m (including 9m at 5.60g/t gold from 38m and 3m at 9.56g/t gold from 42m); and 3m at 10.13g/t gold from 50m<sup>7</sup>.

In this release, assay results are reported from 4 follow-up RC holes (RCSR20-186-189) drilled to test previously reported significant gold mineralisation, with hole RCSR20-189 returning **58m at 1.14g/t gold** from 3m and **3m at 2.48g/t gold** from 89m.

A traverse of shallow AC holes drilled along strike to the north of the RC holes intersected **9m at 1.10g/t gold** from 45m with the hole ending in mineralisation.

The drilling completed to date at Koko has confirmed bedrock gold mineralisation extending over a ~200m strike length that remains open at depth with an apparent easterly dip and southerly plunge, similar to what has been observed along strike to the north. These results also potentially extend the overall SK1 trend up to 3km in length (Refer Figure 9 and 10).

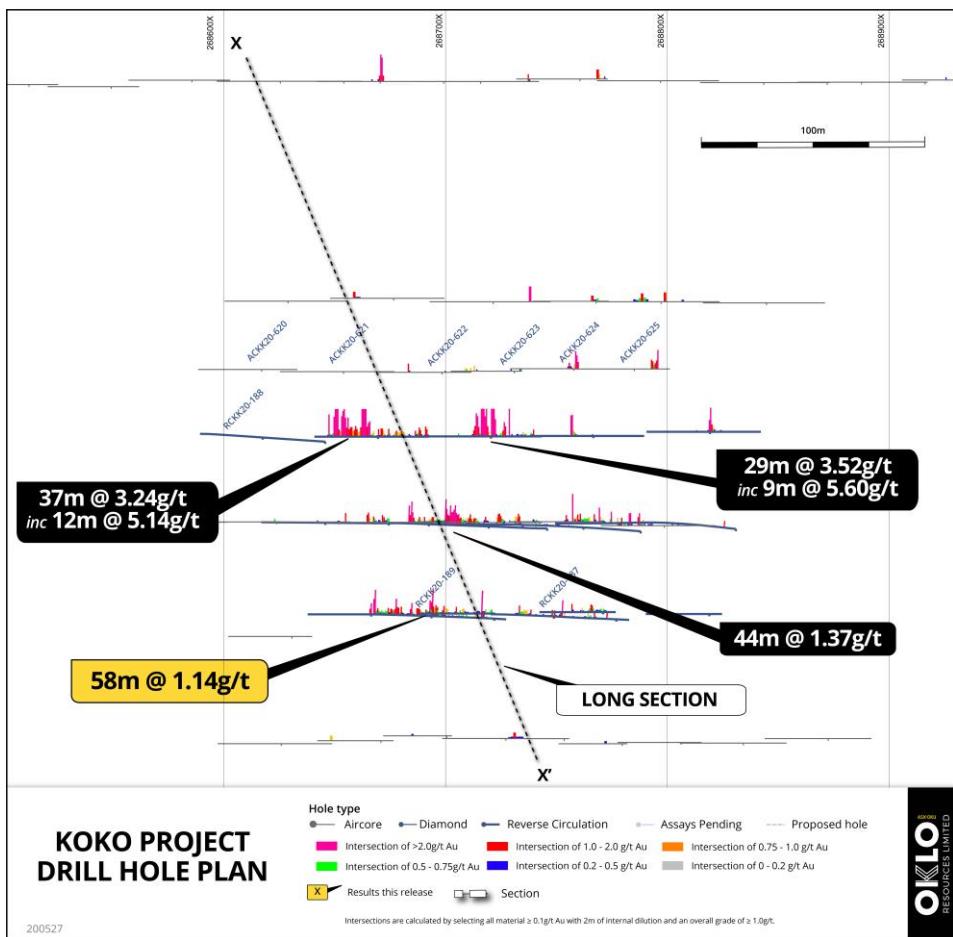

Figure 9: Koko Drill Hole Plan

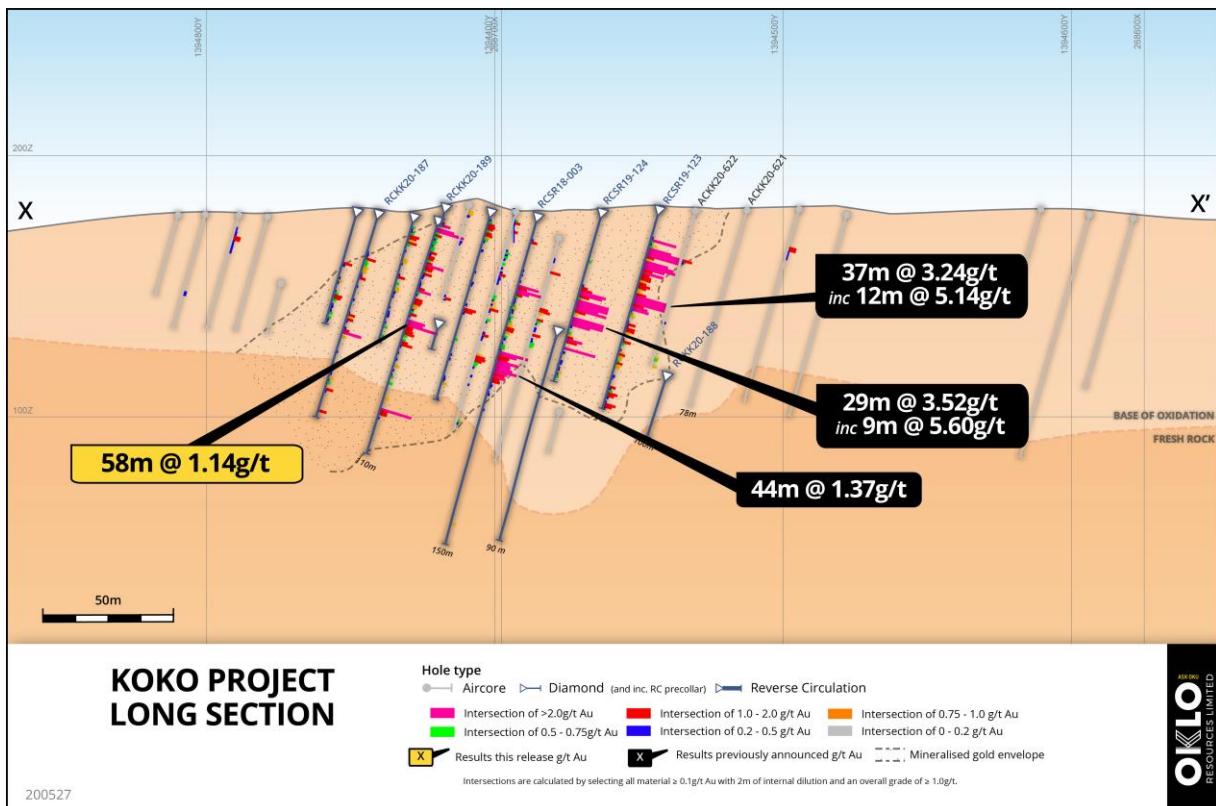

Figure 10: Koko Long Section ---- Field of view shown in Figure 9

**DRILL RESULTS PENDING**

Drilling is ongoing at SK1 with further RC and DD holes completed and assay results expected in coming weeks. The Company anticipates the current drilling program will continue up to the start of the wet season in July.

**COVID-19 UPDATE**

Oklo's staff and contractors have to date been minimally impacted by the Covid-19 pandemic and the Company continues to operate its programs within Mali as planned. Mali has imposed a closure of its border for travel as well as a night-time curfew restricting evening travel.

The Company has a focus on the welfare of its employees and has implemented measures to ensure their well-being including; health screening and temperature monitoring, change in rosters, spatial distancing protocols, a change in flow of staff to and from local communities, and the minimisation of staff in the Bamako administrative office. The Company's expatriate staff departed the country prior to the border closure.

The supply of fuel and drilling consumables is continuing with a suitable precautionary stockpiling occurring. No changes to the planned work programs have occurred other than a reduction in the volume of reconnaissance geophysical surveys being undertaken due to the large quantity of local labour support required. The situation is being continuously monitored by our in-country Director, Dr Madani Diallo and further actions may be appropriately undertaken as deemed necessary.

**ABOUT OKLO RESOURCES**

Oklo Resources is an ASX listed gold exploration company with a total landholding of 1,405km<sup>2</sup> covering highly prospective greenstone belts in Mali, West Africa. The Company's current focus is on its West Mali landholding (~405km<sup>2</sup>), and in particular its flagship Dandoko Project located east of the prolific Senegal-Mali Shear Zone and in close proximity to numerous world-class gold operations. The Company has a corporate office located in Sydney, Australia and an expert technical team based in Bamako, Mali, led by Dr Madani Diallo who has previously been involved in several significant discoveries totalling circa 30Moz gold.

Location of Oklo Projects in West and South Mali

**Competent Person's Declaration**

The information in this announcement that relates to Exploration Results is based on information compiled by geologists employed by Africa Mining (a wholly owned subsidiary of Oklo Resources) and reviewed by Mr Simon Taylor, who is a member of the Australian Institute of Geoscientists. Mr Taylor is the Managing Director of Oklo Resources Limited. Mr Taylor is considered to have sufficient experience deemed relevant to the style of mineralisation and type of deposit under consideration, and to the activity that he is undertaking to qualify as a Competent Person as defined in the 2012 edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves" (the 2012 JORC Code). Mr Taylor consents to the inclusion in this report of the matters based on this information in the form and context in which it appears.

This report contains information extracted from previous ASX market announcements reported in accordance with the JORC Code (2012) and available for viewing at [www.okloresources.com](http://www.okloresources.com). Oklo Resources confirms that in respect of these announcements it is not aware of any new information or data that materially affects the information included in any original ASX market announcement. The announcements are as follows:

**DANDOKO PROJECT:**

Announcements dated 21st December 2016, 30th January 2017, 21st February 2017, 3rd March 2017, 7th March 2017, 15th March 2017, 30th March 2017, 6th April 2017, 26th April 2017, 29th May 2017, 21st June 2017, 12th July 2017, 25th July 2017, 14th August 2017, 16th August 2017, 4th September 2017, 28th November 2017, 5th December 2017, 20th December 2017, 5th February 2018, 22nd February 2018, 8th March 2018, 28th March 2018, 3rd May 2018, 16th May 2018, 22nd May 2018, 2nd July 2018, 6th August 2018, 28th August 2018, 3rd September 2018, 19th September 2018, 30th January 2019, 6th March 2019, 15th August 2019, 22nd October 2019, 20th November 2019, 10th December 2019, 17th December 2019, 14th January 2020, 20th January 2020, 29th January 2020, 25th February 2020, 1<sup>st</sup> April 2020, 7<sup>th</sup> April 2020 and 29<sup>th</sup> April 2020.

## JORC CODE, 2012 EDITION – TABLE 1

### Section 1 Sampling Techniques and Data

CRITERIA	JORC CODE EXPLANATION	COMMENTARY
<b>Sampling techniques</b>	<ul style="list-style-type: none"> <li>▶ Nature and quality of sampling, measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</li> <li>▶ Aspects of the determination of mineralisation that are Material to the Public Report.</li> <li>▶ In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</li> </ul>	<ul style="list-style-type: none"> <li>▶ All holes have been routinely sampled on a 1m interval for gold</li> <li>▶ 1 metre samples are preserved for future assay as required.</li> <li>▶ RC Samples were collected in situ at the drill site and are split collecting 2 to 3 kg per sample. Certified reference material and sample duplicates were inserted at regular intervals.</li> <li>▶ DD samples are cut to half core on 1m intervals.</li> <li>▶ All samples were submitted SGS, Bamako Mali using a 50g Fire Assay gold analysis with a 10ppb Au detection level.</li> </ul>
<b>Drilling techniques</b>	<ul style="list-style-type: none"> <li>▶ Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face&lt;sampling bit or other type, whether core is oriented and if so, by what method, etc).</li> </ul>	<ul style="list-style-type: none"> <li>▶ RC drilling was carried out by AMCO drilling</li> <li>▶ DD drilling was undertaken by AMCO drilling and utilised PQ and HQ triple tube drilling</li> </ul>
<b>Drill sample recovery</b>	<ul style="list-style-type: none"> <li>▶ Method of recording and assessing core and chip sample recoveries and results assessed.</li> <li>▶ Measures taken to maximise sample recovery and ensure representative nature of the samples.</li> <li>▶ Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.</li> </ul>	<ul style="list-style-type: none"> <li>▶ An initial visual estimate of RC sample recovery was undertaken at the drill rig for each sample metre collected.</li> <li>▶ Collected samples were weighed to ensure consistency of sample size and monitor sample recoveries.</li> <li>▶ For DD core recovery and RQD observations are made.</li> <li>▶ A number of zones of poor recovery were encountered in drilling. Where recovery has been deemed to be poor or was null it has been treated as having a 0ppm grade in any compositing undertaken.</li> <li>▶ No systematic sampling issue, recovery issue or bias was picked up and it is therefore considered that both sample recovery and quality is adequate for the drilling technique employed</li> </ul>
<b>Logging</b>	<ul style="list-style-type: none"> <li>▶ Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.</li> <li>▶ Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.</li> <li>▶ The total length and percentage of the relevant intersections logged.</li> </ul>	<ul style="list-style-type: none"> <li>▶ All drill samples were geologically logged by Oklo Resources subsidiary Africa Mining geologists.</li> <li>▶ Geological logging used a standardised logging system.</li> </ul>
<b>Sub-sampling techniques and sample preparation</b>	<ul style="list-style-type: none"> <li>▶ If core, whether cut or sawn and whether quarter, half or all core taken.</li> <li>▶ If non&lt;core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.</li> <li>▶ For all sample types, the nature, quality and appropriateness of the sample preparation technique.</li> <li>▶ Quality control procedures adopted for all sub&lt;sampling stages to maximise representivity of samples.</li> <li>▶ Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field duplicate/second&lt;half sampling.</li> </ul>	<ul style="list-style-type: none"> <li>▶ RC samples were split utilizing a 3 tier riffle splitter with a 1m sample being taken.</li> <li>▶ Duplicates were taken to evaluate representativeness</li> <li>▶ Further sample preparation was undertaken at the SGS laboratories by SGS laboratory staff</li> <li>▶ All DD core was ½ cut and ¼ cut when a duplicate sample was taken.</li> <li>▶ Duplicates were taken to evaluate representativeness</li> <li>▶ At the laboratory, samples were weighed, dried and fine crushed to 70% &lt;2mm (jaw crusher), pulverized and split to 85 %&lt; 75 um. Gold is assayed by fire assay (50g charge) with an AAS</li> </ul>

## ASX ANNOUNCEMENT

CRITERIA	JORC CODE EXPLANATION	COMMENTARY
	<ul style="list-style-type: none"> <li>► Whether sample sizes are appropriate to the grain size of the material being sampled.</li> </ul>	<ul style="list-style-type: none"> <li>► Finish.</li> <li>► Sample pulps were returned from the SGS laboratory under secure "chain of custody" procedure by Africa Mining staff and are being stored in a secure location for possible future analysis.</li> <li>► Sample sizes and laboratory preparation techniques are considered to be appropriate for this early stage exploration and the commodity being targeted.</li> </ul>
<b>Quality of assay data and laboratory tests</b>	<ul style="list-style-type: none"> <li>► The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.</li> <li>► For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.</li> <li>► Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established.</li> </ul>	<ul style="list-style-type: none"> <li>► Analysis for gold on AC, RC and diamond samples is undertaken at SGS Bamako by 50g Fire Assay with an AAS finish to a lower detection limit of 10ppb Au.</li> <li>► Fire assay is considered a "total" assay technique.</li> <li>► No field non assay analysis instruments were used in the analyses reported.</li> <li>► A review of certified reference material and sample blanks inserted by the Company indicated no significant analytical bias or preparation errors in the reported analyses.</li> <li>► Results of analyses for field sample duplicates are consistent with the style of mineralisation evaluated and considered to be representative of the geological zones which were sampled.</li> <li>► Internal laboratory QAQC checks are reported by the laboratory and a review of the QAQC reports suggests the laboratory is performing within acceptable limits.</li> </ul>
<b>Verification of sampling and assaying</b>	<ul style="list-style-type: none"> <li>► The verification of significant intersections by either independent or alternative company personnel.</li> <li>► The use of twinned holes.</li> <li>► Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.</li> <li>► Discuss any adjustment to assay data.</li> </ul>	<ul style="list-style-type: none"> <li>► All drill hole data is paper logged at the drill site and then digitally entered by Company geologists at the site office.</li> <li>► All digital data is verified and validated by the Company's database consultant in Paris before loading into the drill hole database.</li> <li>► No twinning of holes was undertaken in this program.</li> <li>► Reported drill results were compiled by the company's geologists, verified by the Company's database administrator and exploration manager.</li> <li>► No adjustments to assay data were made.</li> </ul>
<b>Location of data points</b>	<ul style="list-style-type: none"> <li>► Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.</li> <li>► Specification of the grid system used.</li> <li>► Quality and adequacy of topographic control.</li> </ul>	<ul style="list-style-type: none"> <li>► AC, RC and diamond drill hole collars are positioned using differential GPS (DGPS).</li> <li>► Accuracy of the DGPS &lt; +/− 0.1m and is considered appropriate for this level of exploration</li> <li>► The grid system is UTM Zone 29N</li> </ul>
<b>Data spacing and distribution</b>	<ul style="list-style-type: none"> <li>► Data spacing for reporting of Exploration Results.</li> <li>► Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.</li> <li>► Whether sample compositing has been applied.</li> </ul>	<ul style="list-style-type: none"> <li>► RC and DD drilling is now being undertaken on a ~20x40m spacing as infill undertaken in areas of identified higher grade zones.</li> <li>► Drilling reported in this program is being designed to infill or extend known mineralisation to a sufficient density of drilling to enable the estimation of a maiden resource.</li> </ul>
<b>Orientation of data in relation to geological structure</b>	<ul style="list-style-type: none"> <li>► Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.</li> <li>► If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.</li> </ul>	<ul style="list-style-type: none"> <li>► Exploration is at an early stage and, as such, knowledge on exact location of mineralisation and its relation to lithological and structural boundaries is not accurately known. However, the current hole orientation is considered appropriate for the program to reasonably assess the prospectivity of known structures interpreted from other data sources.</li> </ul>

CRITERIA	JORC CODE EXPLANATION	COMMENTARY
Sample security	<ul style="list-style-type: none"> <li>► The measures taken to ensure sample security.</li> </ul>	<ul style="list-style-type: none"> <li>► RC and diamond samples were collected from the company camp by SGS and taken to the SGS laboratory in Bamako under secure "chain of custody" procedure by Africa Mining staff.</li> <li>► Sample pulps were returned from the SGS laboratory under secure "chain of custody" procedure by Africa Mining staff and have been stored in a secure location.</li> <li>► The AC samples remaining after splitting are removed from the site and trucked to the exploration camp where they are stored under security for future reference for a minimum of 6 months</li> </ul>
Audits or reviews	<ul style="list-style-type: none"> <li>► The results of any audits or reviews of sampling techniques and data.</li> </ul>	<ul style="list-style-type: none"> <li>► There have been no external audit or review of the Company's sampling techniques or data at this early exploration stage.</li> </ul>

## Section 2 Reporting of Exploration Results

CRITERIA	JORC CODE EXPLANATION	CRITERIA
Mineral tenement and land tenure status	<ul style="list-style-type: none"> <li>► Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.</li> <li>► The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.</li> </ul>	<ul style="list-style-type: none"> <li>► The results reported in this report are all contained within the Dandoko Exploration Permit, Gombaly Exploration Permit which are held 100% by Africa Mining SARL, a wholly owned subsidiary of Oklo Resources Limited.</li> <li>► The Dandoko permit (100km<sup>2</sup>) which was renewed on the 10/8/17, for a period of 3 years and renewable twice, each for a period of 2 years:</li> <li>► The Gombaly permit (34km<sup>2</sup>) which was granted on the 10/8/17, for a period of 3 years and renewable twice, each for a period of 2 years</li> </ul>
Exploration done by other parties	<ul style="list-style-type: none"> <li>► Acknowledgment and appraisal of exploration by other parties.</li> </ul>	<ul style="list-style-type: none"> <li>► The area that is presently covered by the Dandoko permit was explored intermittently by Compass Gold Corporation between 2010 and 2013.</li> <li>► Exploration consisted of aeromagnetic surveys, gridding, soil sampling and minor reconnaissance (RC) drilling.</li> <li>► Exploration consisted of aeromagnetic surveys, gridding, soil sampling.</li> <li>► Ashanti Mali undertook reconnaissance soil sampling surveys over part of the license area.</li> </ul>
Geology	<ul style="list-style-type: none"> <li>► Deposit type, geological setting and style of mineralisation.</li> </ul>	<ul style="list-style-type: none"> <li>► The deposit style targeted for exploration is orogenic lode gold.</li> <li>► This style of mineralisation can occur as veins or disseminations in altered (often silicified) host rock or as pervasive alteration over a broad zone.</li> <li>► Deposit are often found in close proximity to linear geological structures (faults &amp; shears) often associated with deep seated structures.</li> <li>► Lateritic weathering is common within the project area. The depth to fresh rock is variable and may extend up to 50-70m below surface and in this drill program weathering of &gt;150m was encountered</li> </ul>
Drill hole Information	<ul style="list-style-type: none"> <li>► A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes: <ul style="list-style-type: none"> <li>o easting and northing of the drill hole collar</li> <li>o elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>► Locations are tabulated within the report and are shown on plans and sections within the main body of this announcement.</li> <li>► Dip of lithologies and/or mineralisation are not currently known. Drilling was oriented based on dips of lithologies observed ~5km to the north of the prospect and may not reflect the actual dip.</li> </ul>

CRITERIA	JORC CODE EXPLANATION	CRITERIA
	<ul style="list-style-type: none"> <li>○ dip and azimuth of the hole</li> <li>○ down hole length and interception depth</li> <li>○ hole length.</li> </ul> <p>► If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.</p>	
<b>Data aggregation methods</b>	<p>► In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.</p> <p>► Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</p> <p>► The assumptions used for any reporting of metal equivalent values should be clearly stated.</p>	<p>► Intervals are reported using a threshold where the interval has a 0.3 g/t Au average or greater over the sample interval and selects all material greater than 0.10 g/t Au allowing for up to 2 samples of included dilution every 10m.</p> <p>► No grade top cut off has been applied to full results presented in Significant Intersection Table.</p> <p>► No metal equivalent reporting is used or applied</p>
<b>Relationship between mineralisation widths and intercept lengths</b>	<p>► These relationships are particularly important in the reporting of Exploration Results.</p> <p>► If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.</p> <p>► If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known').</p>	<p>► The results reported in this announcement are considered to be of an early stage in the exploration of the project.</p> <p>► Mineralisation geometry is not accurately known as the exact orientation and extent of known mineralised structures are not yet determined.</p> <p>► Mineralisation results are reported as "downhole" widths as true widths are not yet known</p>
<b>Diagrams</b>	<p>► Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</p>	<p>► Drill hole location plans are provided in earlier releases with new holes tabulated within this release.</p>
<b>Balanced reporting</b>	<p>► Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.</p>	<p>► Drill hole locations are provided in earlier reports.</p> <p>► All assays received of <math>\geq 0.1</math> ppm have been reported.</p> <p>► No high cuts to reported data have been made.</p>
<b>Other substantive exploration data</b>	<p>► Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.</p>	<p>► No other exploration data that is considered meaningful and material has been omitted from this report</p>
<b>Further work</b>	<p>► The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling).</p> <p>► Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.</p>	<p>► AC, RC and diamond drilling is ongoing on the Company's SK1 North prospect with a view to completing a resource estimate for the Seko prospect in H2, 2020.</p>
