

3D Resources Adelong Goldfield Maiden Drilling Program

Highlights

- CY2020 Drilling Program scheduled to commence 10 August 2020
- All necessary permits, contracts and access agreements in place
- Program expanded to include Currajong along-side the Donkey Hill Project
- Additional drilling targets being considered

3D Resources Limited (ASX: DDD) (“3D Resources” or the “Company”) is pleased to provide the following update on its proposed drilling program at the Adelong Goldfield Projects.

Maiden Drill Program

The Company is pleased to set the commencement of its maiden drilling program at the Adelong Goldfield Projects from 10 August 2020. The initial phase of the program was to focus drilling at the Donkey Hill Project; however it was decided to expand the program to Currajong. The inclusion of Currajong included lodgement of an amended Mine Operation Plan which was only recently approved. The expansion to Currajong will maximise impact of the drilling program. The Company is now focused on enabling long lead activities ahead of the scheduled commencement of drilling in August.

Approval has been obtained for further drilling at the Challenger Project and an application has been made to drill at the Sawpit Project. Also being considered for geochemical soil sampling is an unexplored 1km section between the Currajong and Gibraltar Projects, as well as a 3km mineralised zone north of the Sawpit Project where historic workings over a strike of approximately 3km (with the exception of Sawpit), have never been drilled. A decision to drill at these Projects is expected to be included in subsequent phases currently considered for late CY2020.

3D Resources continues to monitor developments related to Covid-19 to minimise impacts on the maiden drilling program. The Company has noted the announcement by the Victorian and NSW Governments that the state border will be closed from midnight 7 July 2020. Currently, all senior geological staff associated with the Adelong Goldfield Projects reside in Victoria. All required border travel permits will be obtained when the terms and conditions governing that process is announced by the NSW state government. If needed, the Company may consider investigating the possibility of using NSW based geologists to oversee the drilling program.

The Chairman of 3D Resources, Mr Ian Hastings, commented,

“The Company is excited to announce our maiden drilling program at the Adelong Goldfield Projects scheduled to start next month. Concurrently, we continue to progress our strategic review with a focus on maximising impact for our shareholders.

We see tremendous opportunity across the Adelong Goldfields Projects and I look forward to working with the Board to unlock the potential in the coming months.”
