

17 July 2020

FURTHER SIGNIFICANT GOLD IN MORCK WELL JV

AIR CORE DRILLING

MORCK WELL JV

- Air Core (AC) Drilling continues with 628 holes completed for 57,246 metres
- Further significant Gold results from the first pass Air Core drilling completed during the quarter include:
 - 5m at 4.76 g/t Au from 70m – MWAC2682
 - 5m at 2.22 g/t Au from 35m – MWAC2568
 - 10m at 1.25 g/t Au from 110m – MWAC2679
 - 5m at 1.26 g/t Au from 40m – MWAC2732
- Significant results remain open along strike to the east and west
- Highly significant Gold intercepts returned from single metre sampling of previously reported composited Air Core drilling including:
 - 7m at 6.09 g/t Au from 48m including 3m at 10.56 g/t Au from 49m - MWAC2225
 - 1m at 8.47 g/t Au from 76m - MWAC2226
 - 6m at 1.19 g/t Au from 80m - MWAC2226
- Significant results remain open along strike to the northeast and southwest for 800 metres.
- Infill Air Core and RC Drilling planned to further evaluate significant gold results
- Approximately 550 Air Core holes remaining to be drilled in the 100 x 1,600m, first-pass air core drill programme

CASHMAN JV

- First Pass Air Core Drilling continues with 89 Air Core (AC) drill holes completed for 2,173m
- Two RC drill holes for 794 metres completed
- Significant Gold result returned from the single metre sampling of previously reported composite result within Air Core drilling comprising:
 - 1m at 9.72 g/t Au from 40m – CHAC0780
- Approximately 730 Air core holes remaining to be drilled in the first-pass Air Core drill programme

CHEROONA JV

- First Pass Air Core Drilling commences with 319 Air Core drill holes completed for 10,026m – 100 holes remaining
- One RC drill holes completed for 436 metres
- Significant results returned from first pass Air Core drilling comprise:
 - 5m at 0.22 % Cu from 75m – CHAC1078
 - 5m at 1.39 g/t Au from 40m – CHAC1205

Western Australian Gold and Base Metals explorer **Auris Minerals Limited** (“**Auris**” or “**the Company**”) (**ASX: AUR**) is pleased to provide the following update on exploration activities completed during the June quarter 2020 within the Morck Well, Cashman and Cheroona Joint Ventures with Sandfire Resources Limited (“**Sandfire**”; **ASX: SFR**) in the Bryah Basin, Western Australia. Highlighting the update is the return of further significant gold results from the Morck Well JV.

Auris Chief Operating Officer, Mike Hendriks said: *“The latest gold and copper results from the air core drilling completed by Sandfire during the quarter are extremely encouraging. Further high-grade gold mineralisation has been intersected in very wide spaced, first pass, regional air core drilling in the Morck Well project which, together with the high grade gold mineralisation intersected previous quarter, highlights the gold prospectivity and potential of the project and the 100% Auris Feather Cap project to the west. Further drilling is required and assays to be received, and the company looks forward to updating shareholders on these activities in due course”*

MORCK WELL JV

Air Core Drilling

Regional Air Core (AC) drilling continued within the Morck Well JV, with a total of 628 holes for 57,246 metres, (MWAC2352 – MWAC2872 & MWAC2901 – MWAC3106), completed during the quarter. The drilling forms part of the first-pass, 100 x 800m and 100 x 1,600m spaced programs, designed to provide high quality litho-geochemical data and assist in defining the interpreted stratigraphic sequence through the Morck Well tenure covered by the JJAC native title group, (Figure 1).

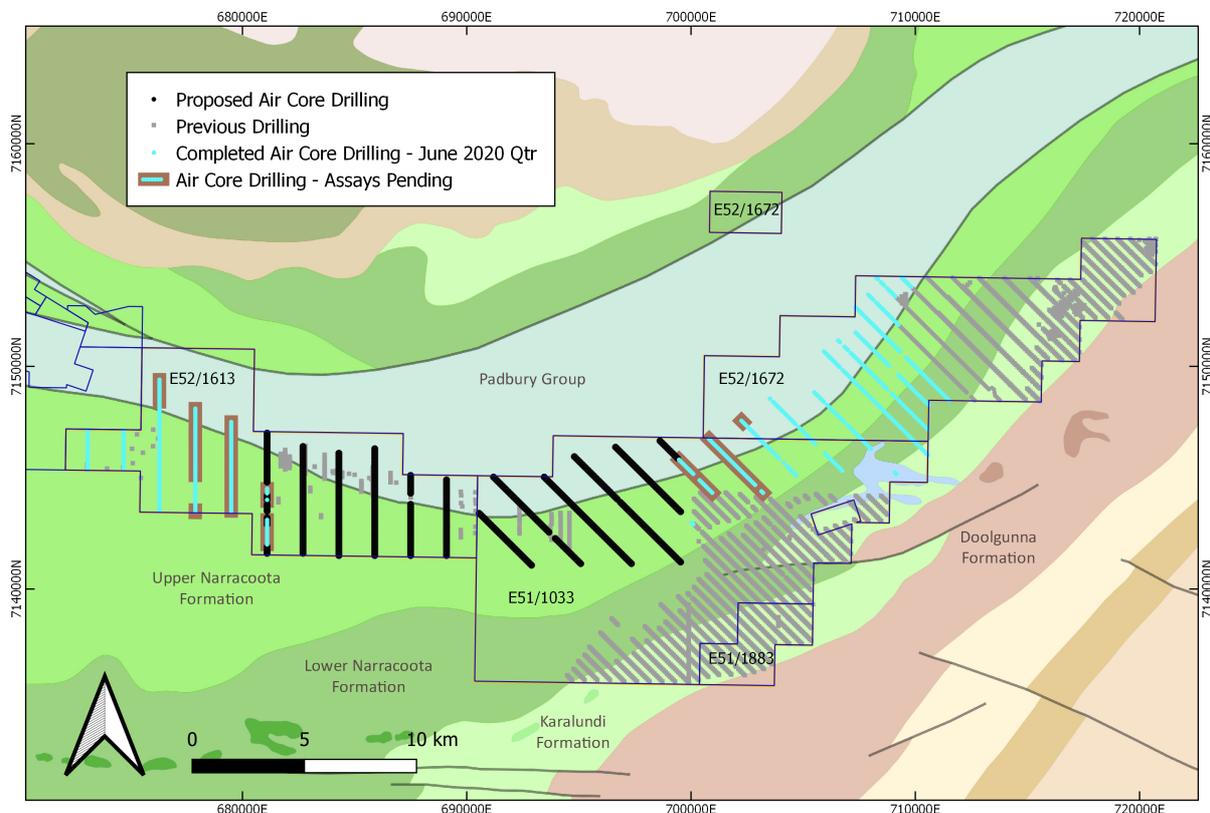

Figure 1. Morck Well JV Summary Geology Plan showing extent of drilling completed and proposed Air Core drilling remaining.

All significant results returned from the first pass composite sampling from the Morck Well JV air core drilling are tabulated below, (Table 1):

Table 1. Significant composite intervals returned from first pass Morck Well JV AC

Hole ID	From (m)	To (m)	Interval (m)	Intersection			
				Cu (ppm)	Au (ppm)	Zn (ppm)	Pb (ppm)
MWAC2446	105	110	5	<1	0.82	126	5
MWAC2448	35	40	5	19	0.61	55	13
MWAC2449	65	70	5	7	0.81	25	8
MWAC2568	35	40	5	51	2.22	49	15
MWAC2573	95	99	4	70	0.56	107	11
MWAC2666	135	140	5	208	0.68	143	11
MWAC2668	110	112	2	33	1.22	10	76
MWAC2679	110	120	10	44	1.25	44	9
MWAC2682	70	75	5	50	4.76	26	4
MWAC2705	95	100	5	1220	-0.01	23	118
MWAC2732	40	45	5	91	1.26	1	60
MWAC2806	50	55	5	1140	<0.01	17	112
MWAC2909	75	76	1	1,840	<0.01	49	465

Highly significant gold mineralisation, including the maximum result of **5m @ 4.76g/t Au from 70m** (MWAC2682, Figure 2), has been intersected within 100m x 1,600m spaced air core drilling in the western extremity of the project within tenement E52/1613. The significant gold mineralisation is in a similar stratigraphic location to previous significant mineralisation with air core drilling reported last quarter, (ASX announcement dated 30 March 2020), located approximately 40 kilometres along strike to the east. The Durack resource is located approximately 5 kilometres to the west-northwest of the above significant mineralisation and the companies Feather Cap project boundary is located 800 metres to the west. The mineralisation is open along strike to the east and west. Air core drilling results are pending on drilling completed 1,600 metres to the east.

Single metre sampling was completed on significant air core drilling completed during the previous quarter, (ASX announcement dated 30 March 2020) and significant results are tabulated below, (Table 2). The results from the sampling highlight the high-grade nature of the mineralisation returning a maximum result of **7m @ 6.09g/t Au from 48m including 3m @ 10.6g/t Au from 49m**. Infill air core drilling is planned to follow up this significant drilling.

including	80	82	2	69	1.25	66	<1
and	83	84	1	64	3.45	67	3

Results for 158 Air Core drill holes (MWAC2688 – MWAC2700, MWAC2817 – MWAC2872, MWAC2918 – MWAC3000 and MWAC3101 – MWAC3106) are pending. All drill hole collar details for drilling completed are included in Appendix 1.

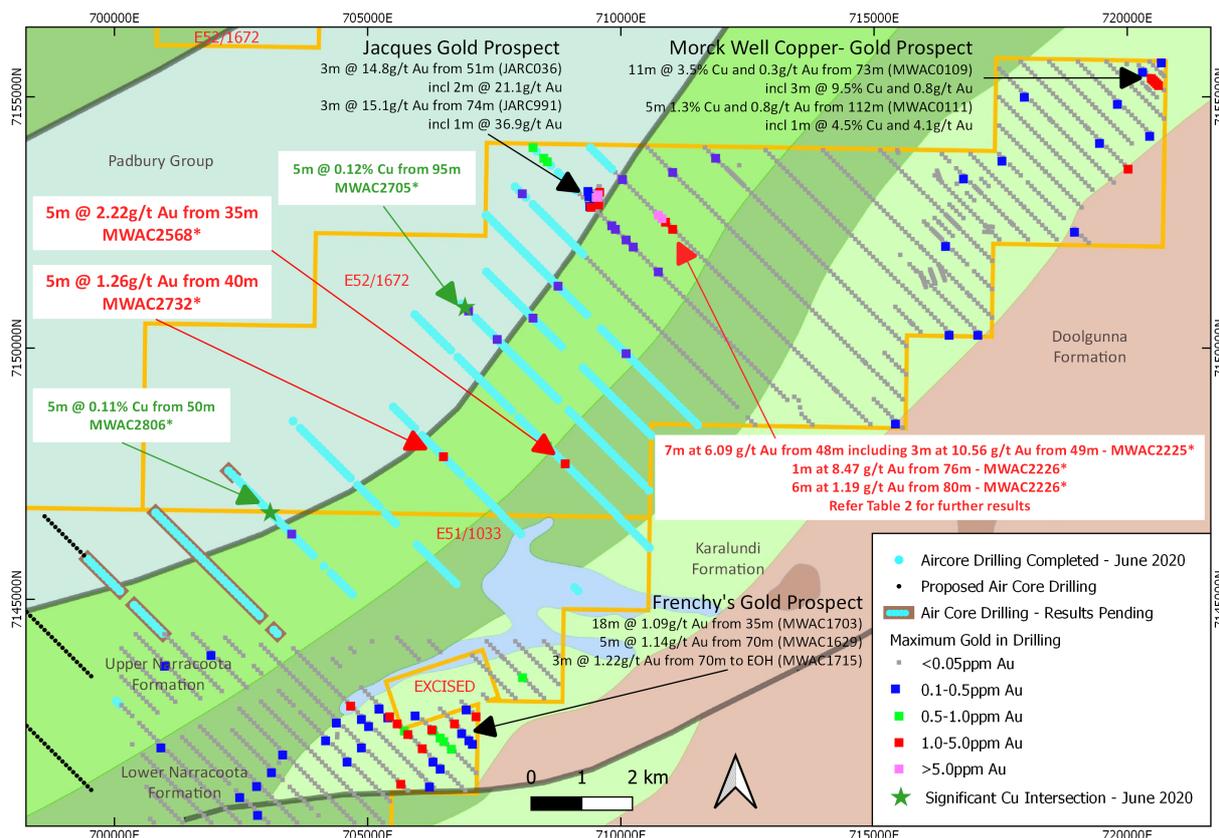

Figure 3. AC Drilling conducted within the Morck Well JV (Eastern Plan)

- Notes - Morck Well Copper – Gold Prospect – Refer SFR announcement dated 6 June 2018
- Jacques Gold Prospect – Refer RNI announcement dated 16 April 2013
- Frenchy's Gold Prospect – ASX announcement dated 16 April 2019
- * - Significant result returned during reporting period

Geological Understanding

Drilling of the regional first pass air core programme has identified lithologies from the Karalundi, Narracoota, Red Bore and Wilthorpe Formations as have been interpreted along-strike to the northeast in E52/1715. Mt Leake Formation has also been identified as a thin cap unconformably overlying the stratigraphy over the southern sections of the drill lines.

Geological interpretation at the Morck Well Project has begun and will continue as drilling is completed and assay results are returned.

Geophysics

DHEM surveying was undertaken in surface hole MWRC0050. No anomalous response associated with a bedrock conductor has been identified.

Ongoing and Forecast Work

Approximately 550 AC holes remain to be drilled in the first pass 100 x 1,600m spaced program over the remainder of the Morck Well tenements within the JJAC native title claim.

A program of air core drilling is planned to infill the area around the anomalous Au results returned from MWAC2223 – MWAC2226 during Q1 2020, although an additional heritage survey is required before these holes can be drilled. Planning of RC and air core holes to follow-up other areas of gold anomalism is currently ongoing.

CHEROONA JV

Air Core Drilling

Three hundred and nineteen drill holes (CHAC1199, CHAC1204 – CHAC1205, CHAC1211, CHAC1218 – CHAC1233, CHAC1247 – CHAC1250, CHAC1253 – CHAC1485, CHAC1507 – CHAC1556, CHAC1563 – CHAC1571 and CHAC1576 – CHAC1578) were completed for a total of 10,026m (Figures 4 and 5). All holes are part of the first pass 100 x 400m and 100 x 800m spaced first-pass pattern through the Cheroona JV area, designed to test the prospective Karalundi stratigraphy and provide high quality litho-geochemical data.

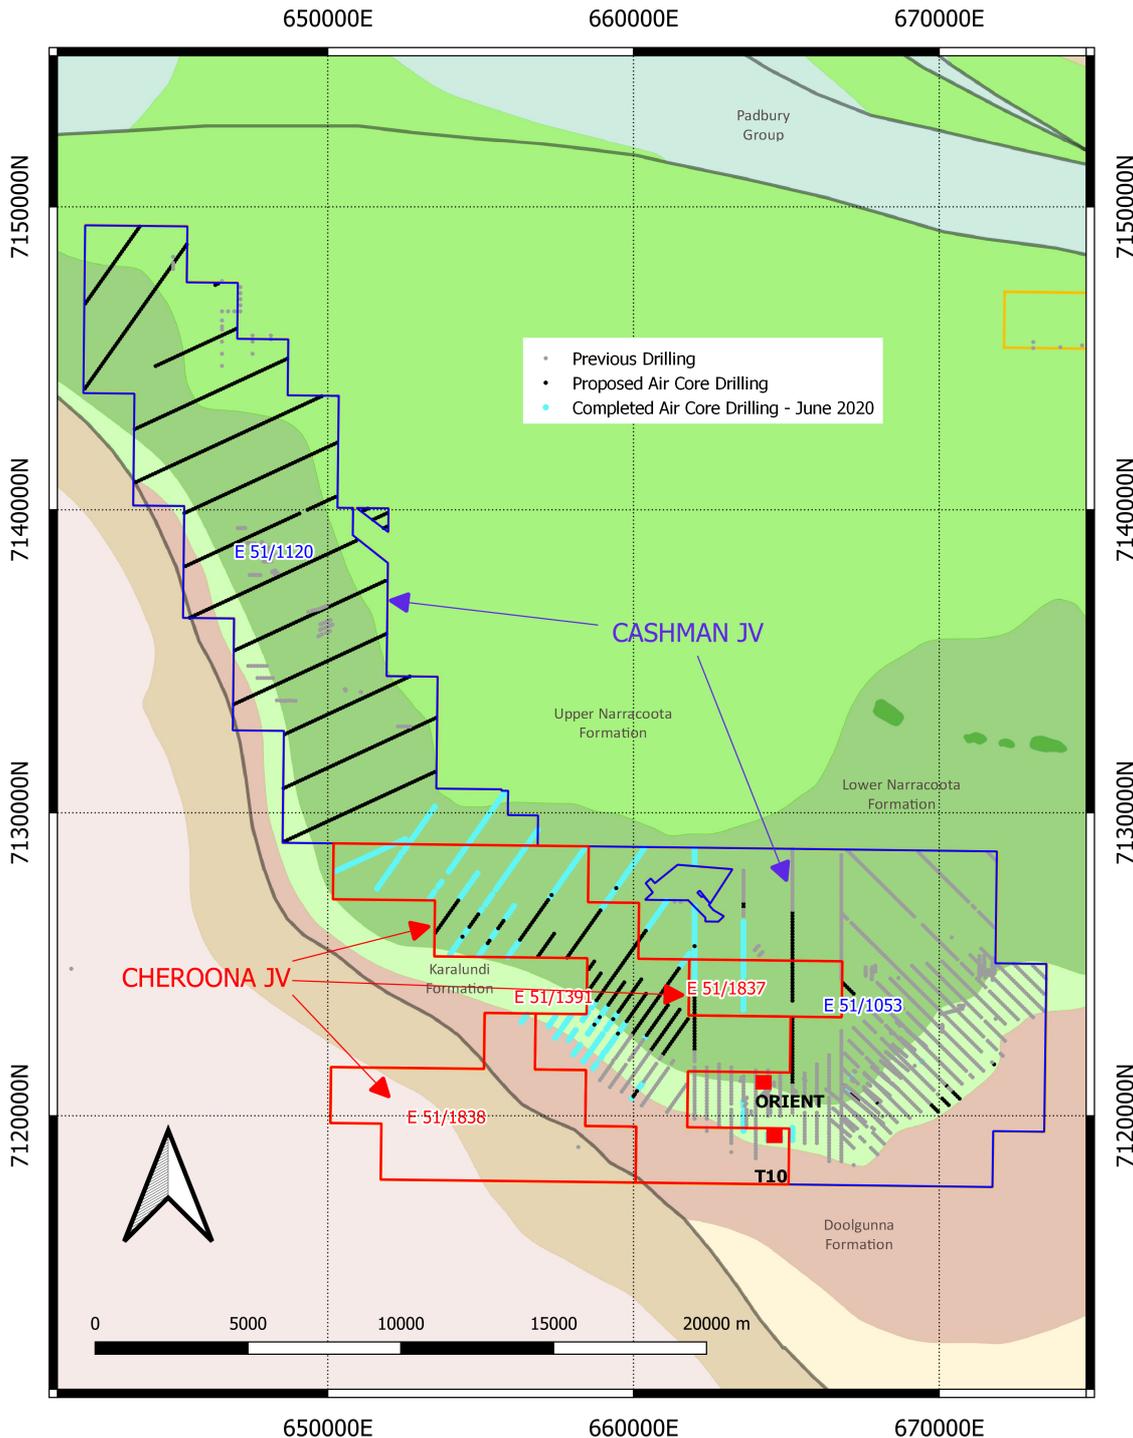

Figure 4. Cashman and Cheroona JV Summary Geology Plan showing extent of drilling completed and Air Core drilling remaining.

Significant results received from the drilling are listed below in Table 3. Results have been received for all air core drilling completed to date with the Cherrona JV to date.

Table 3. Significant intervals returned from Cherrona JV AC

Hole ID	Prospect	From (m)	To (m)	Interval (m)	Intersection				
					Cu (ppm)	Au (ppm)	Zn (ppm)	Pb (ppm)	Sn (ppm)
CHAC1078	Orient	75	80	5	2,210	<0.01	131	1.5	0.7
CHAC1205	Orient	25	30	5	165	1.39	67	40.5	0.1

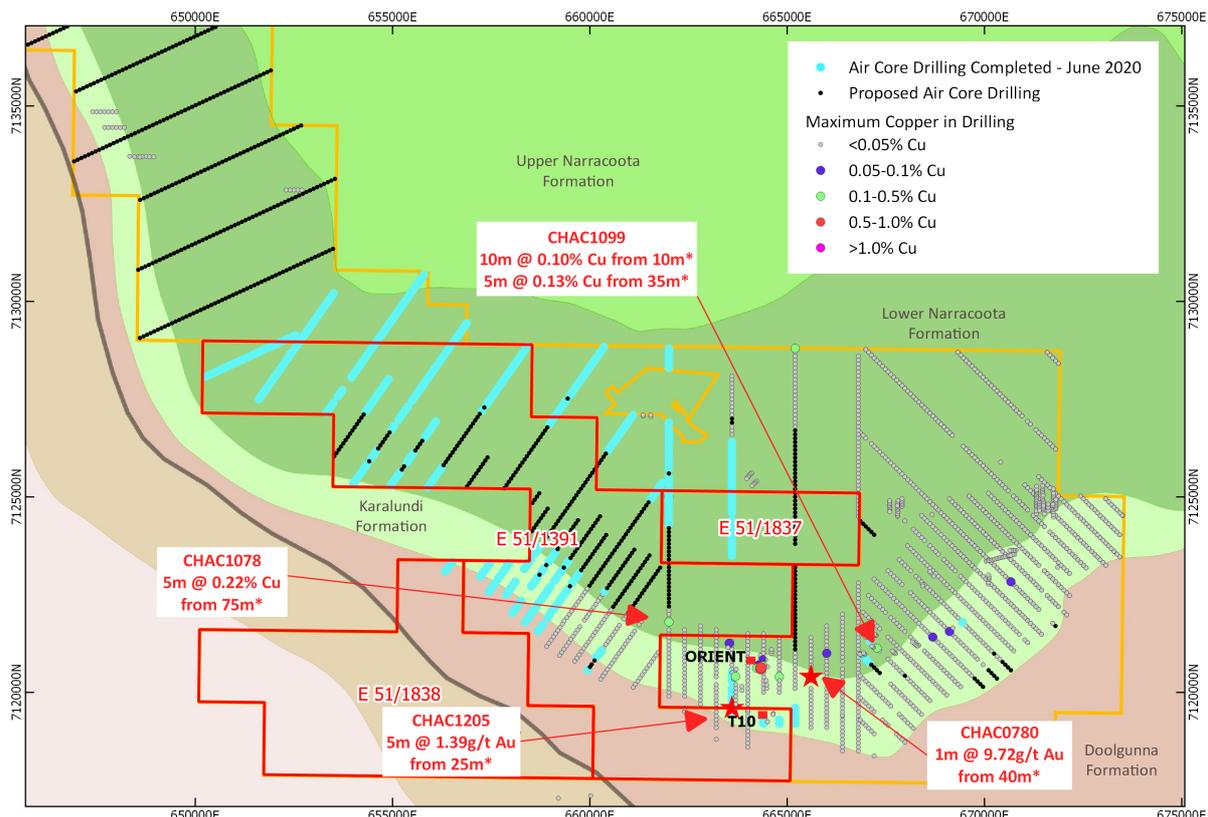

Figure 5. AC Drilling conducted within the Cashman JV and Cherrona JV

Notes - * - Significant result returned during reporting period

The location of the completed drill holes is displayed in Figure 5. All drill holes collar details are included in Appendix 1.

RC Drilling

A single RC drill hole (CHRC0006) was completed for 436 metres to test a geophysical plate derived from MLEM surveying through the West orient prospect area. A potential source to the MLEM anomaly was not identified.

The location of the completed drill hole is displayed in Figure 6. All drill hole collar details for drilling completed are included in Appendix 1.

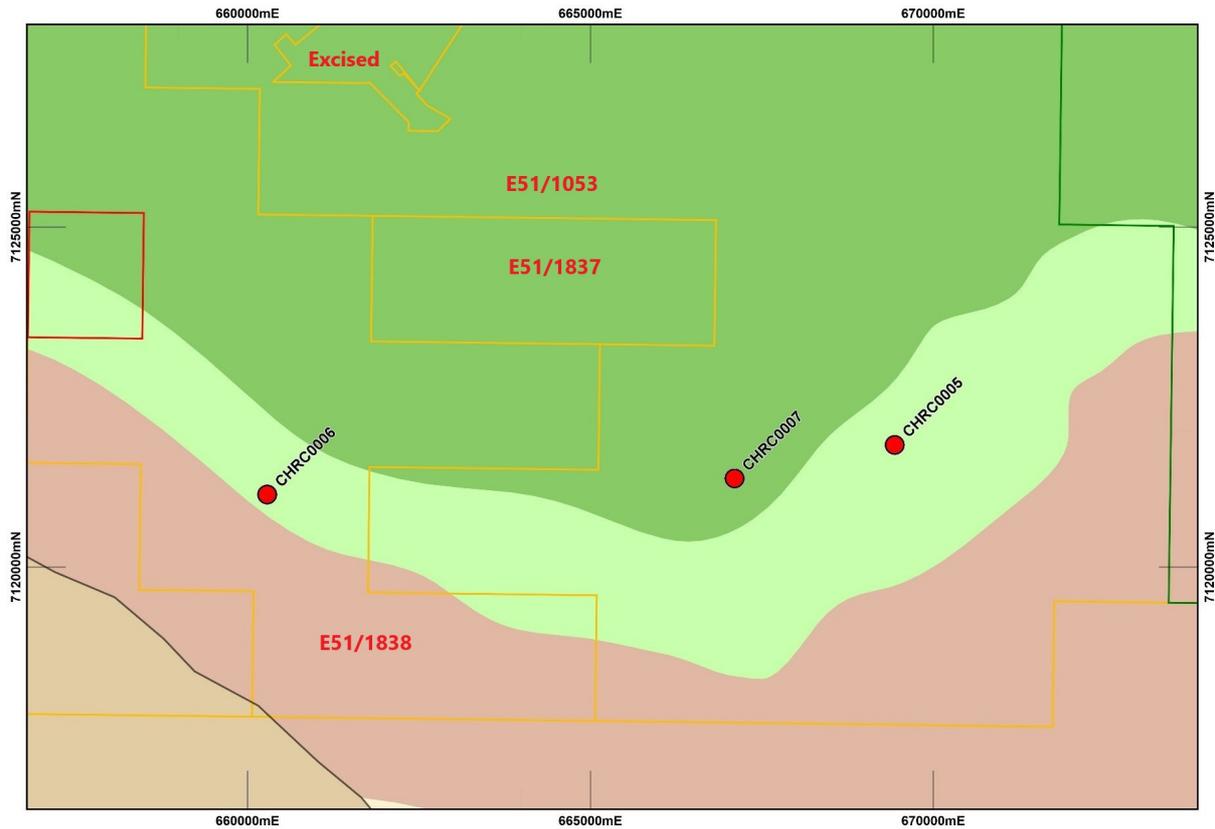

Figure 6. RC Drilling conducted within the Cashman JV and Cheroona JV

Geological Understanding

Drilling of the regional first pass air core programme has identified Doolgunna Formation, Karalundi Formation and Narracoota Formation lithologies, suggesting the stratigraphic relationships seen to the east, within the Cashman JV, continue west through the Cheroona Project. Integration with field mapping and geophysical datasets indicates structural complexity exists throughout the project area with possible stratigraphic repeats, which has an effect on interpretation and targeting.

CHRC0006 intersected dolerite, with no indication of what may have generated the geophysical anomaly. It is possible that the targeted plate may have been interpreted with the wrong dip, further DHEM surveying is to be conducted in the next reporting period in order to further constrain the anomaly.

Geophysics

The planned MLEM surveying at Orient West was completed. Infill lines were completed either side of an anomalous response on line 82900 of the survey at Orient West. This anomaly was recommended for drill targeting.

Final grids, imagery and 3D gravity inversions for the detailed gravity data which incorporates the Cashman JV were completed.

Ongoing and Forecast Work

Approximately 100 air core holes remain to be drilled in the first pass program over the West Cashman and Goodin Find prospect areas, testing the prospective Karalundi Formation trend.

Geological interpretation through the Cheroona Project area has begun and will continue as drilling is completed and assay results are returned. Planning of follow-up RC holes to test anomalous geochemistry identified in first-pass AC drilling is ongoing.

CASHMAN JV

Air Core Drilling

Air core drilling continued within the Cashman JV with 89 drill holes (CHAC1200 – CHAC1203, CHAC1206 – CHAC1210, CHAC1212 – CHAC1217, CHAC1234 – CHAC1246, CHAC1251 – CHAC1252, CHAC1486 – CHAC1506, CHAC1557 – CHAC1562, CHAC1572 – CHAC1575 and CHAC1579 – CHAC1606) completed for a total advance of 2,173m. All holes are part of the regional first pass programme through the project, designed to test the prospective Karalundi stratigraphy and provide high quality litho-geochemical data.

Significant results returned during the period include a result of 1m at 9.72 g/t Au from 40 metres (CHAC0780), returned from single metre sampling of significant composite results returned from air core drilling completed during the previous quarter. Significant gold and copper results are included in Table 4.

Table 4. Significant intervals returned from Cashman JV AC

Hole ID	Prospect	From (m)	To (m)	Interval (m)	Intersection				
					Cu (ppm)	Au (ppm)	Zn (ppm)	Pb (ppm)	Sn (ppm)
CHAC0780	Orient	40	41	1	59	9.72	139	8	1
CHAC1099	East Orient	10	20	10	1,025	<0.01	392	58	2
CHAC1099	East Orient	35	40	5	1,300	<0.01	254	14	0.1

Results have been received for all air core drilling completed to date with the Cashman JV.

The location of the completed drill holes and significant results is displayed in Figure 5. All drill holes collar details for drilling completed are included in Appendix 1.

RC Drilling

Two holes (CHRC0005 and CHRC0007) were completed for a total of 794m. CHRC0005 and CHAC0007 were both designed to test down-dip of anomalism identified in first-pass AC drilling, with CHRC0005 targeting Pb-Zn anomalism in CHAC0625 and CHRC0007 targeting Cu-Zn-Bi anomalism in CHAC1099.

The location of the completed drill holes is displayed in Figure 6. Assay results for CHRC0007 are pending. All drill hole collar details for drilling completed are included in Appendix 1.

Geological Understanding

Drilling of the regional first pass air core programme has identified Doolgunna Formation, Karalundi Formation and Narracoota Formation lithologies, suggesting the stratigraphic relationships seen within drilling to the east of the project, continue south-west through the Cashman JV tenements. Integration with significant field mapping and geophysical datasets indicates structural complexity exists throughout the project area with possible stratigraphic repeats, which influences interpretation and targeting.

CHRC0005 intersected three intervals of magnetite-bearing chemogenic sediments just below the contact between the DeGrussa and Magazine Members, hosted within a thick package of dolomite and dolomitic sediment which may be the source of the Pb-Zn anomalism. CHRC0007 intersected two main sediment horizons, with the latter, from 162-196m, likely to represent the down-dip extension of the sediment horizon hosting anomalism in CHAC1099, although no evidence to suggest the presence of copper mineralisation was observed.

Geophysics

The planned MLEM surveying at Orient Central was completed.

Extensions to the MLEM lines at Orient East were planned after anomalous geochemical results were returned from regional air core drilling. Surveying has begun.

Final grids, imagery and 3D gravity inversions for the detailed gravity data which incorporates the Cashman JV were completed.

Ongoing and Forecast Work

A further 730 AC drill holes are planned to the north and north-west, designed to test whether there is a continuation of the prospective Karalundi Formation stratigraphy through to Mount Fraser and Beatty Pool. This drilling is initially planned on a wider-spaced, 1,600x100m pattern with the aim of identifying prospective Karalundi stratigraphy before infilling with closer-spaced, targeted drill patterns.

Geological interpretation through the Cashman JV area has begun and will continue as drilling is completed and assay results are returned. Planning of follow-up RC holes to test anomalous geochemistry identified in first-pass AC drilling is ongoing.

ABOUT AURIS MINERALS LIMITED

Auris is exploring for base metals and gold in the Bryah Basin of Western Australia. Auris has consolidated a tenement portfolio of 1,410km², which is divided into eight well-defined project areas: Forrest, Cashman, Cheroona, Doolgunna, Morck Well, Feather Cap, Milgun and Horseshoe Well, (Figure 7).

In February 2018, Auris entered a Farm-in Agreement with Sandfire in relation to the Morck Well and Doolgunna Projects which covers ~430km² (the Morck Well JV). During September 2019, Auris entered into a Farm-in with Sandfire in relation to the Cashman Project tenements, E51/1053 and E51/1120, (the Cashman JV). On 4 February 2020 Auris and Northern Star Resources Limited (NST) entered into a Farm-in with Sandfire in relation to the Cheroona Project tenements, E51/1391, E51/1837 and E51/1838, (the Cheroona JV). Sandfire has the right to earn a 70% interest in each of above projects upon completion of a Feasibility Study on a discovery of not less than 50,000t contained copper (or metal equivalent) on the project. Auris manages exploration on all other tenements, including those that are subject to arrangements with third parties.

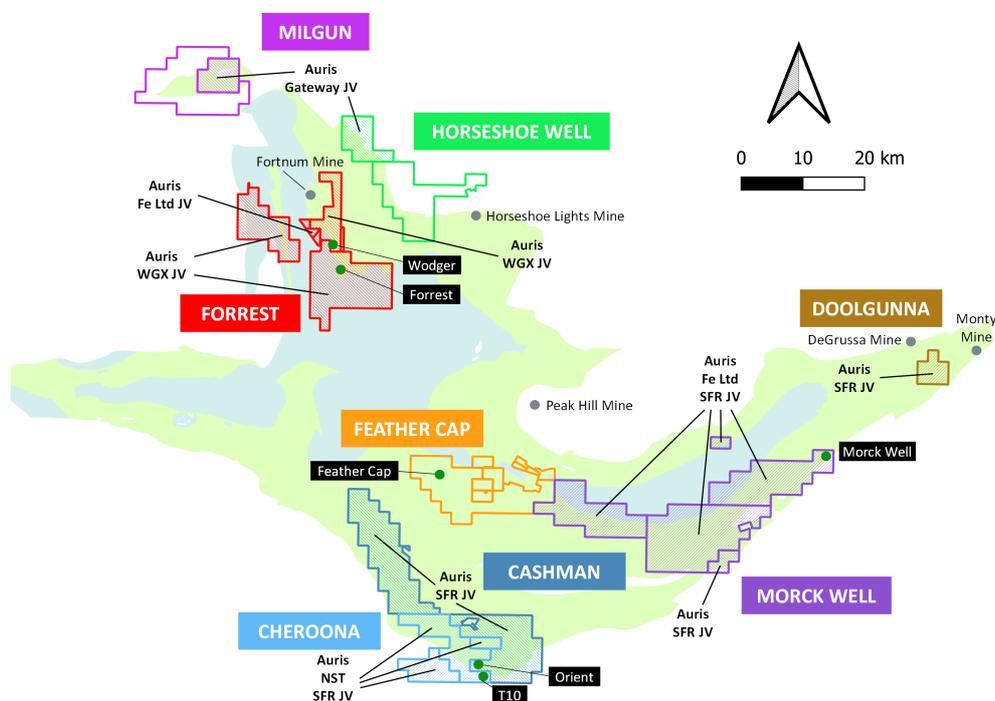

Figure 7: Auris' copper-gold exploration tenement portfolio, with Sandfire (SFR), Northern Star (NST), Westgold (WGX), Fe Ltd and Gateway JV areas indicated

Notes:

1. The Forrest Project tenements E52/1659 and E52/1671 have the following outside interests:
 - Auris 80%; Westgold Resources Ltd 20% (ASX:WGX). Westgold Resources Ltd interest is free carried until a Decision to Mine
 - Westgold Resources Ltd own the gold rights over the Auris interest.
2. The Forrest Project tenement P52/1493 have the following outside interests:
 - Westgold Resources Ltd own the gold rights over the Auris interest.
3. The Forrest Project tenements P52/1494-1496 have the following outside interests:
 - Auris 80%; Fe Ltd 20% (ASX:FEL). Fe Ltd interest is free carried until a Decision to Mine
4. The Cheroona Project tenements E51/1391, E51/1837-38 have the following outside interests:
 - Auris 70%; Northern Star Resources Ltd 30% (ASX:NST)
5. The Horseshoe Well Project tenement E52/3291 has the following outside interests:
 - Auris 85%; Gateway Projects WA Pty Ltd (formerly OMNI Projects Pty Ltd) 15% (Gateway Projects free carried until a Decision to Mine)
6. The Milgun Project tenement E52/3248 has the following outside interests:
 - Auris 85%; Gateway Projects WA Pty Ltd (formerly OMNI Projects Pty Ltd) 15% (Gateway Projects free carried until a Decision to Mine)
7. The Morck Well Project tenements E51/1033, E52/1613 and E52/1672 have the following outside interests:
 - Auris 80%; Fe Ltd 20% (ASX:FEL). Fe Ltd interest is free carried until a Decision to Mine

Competent Person's Statement

Information in this announcement that relates to exploration results is based on and fairly represents information and supporting documentation prepared and compiled by Mr Matthew Svensson, who is a Member of the Australian Institute of Geoscientists. Mr Svensson is Exploration Manager for Auris Minerals Limited. Mr Svensson has sufficient experience, which is relevant to the style of mineralisation and type of deposit under consideration, and to the activity which he is undertaking to qualify as a Competent Person, as defined in the 2012 Edition of the Australasian Code for Reporting Exploration Results, Mineral Resources and Ore Reserves. Mr Svensson consents to the inclusion in the announcement of the matters based on this information in the form and context in which it appears.

No New Information

Except where explicitly stated, this announcement contains references to prior exploration results and Mineral Resource estimates, all of which have been cross-referenced to previous market announcements made by the Company. The Company confirms that it is not aware of any new information or data that materially affects the information included in the relevant market announcements and, in the case of estimates of Mineral Resources that all material assumptions and technical parameters underpinning the results and/or estimates in the relevant market announcement continue to apply and have not materially changed.

Forward Looking Statements

This announcement has been prepared by Auris Minerals Limited. This document contains background information about Auris Minerals Limited and its related entities current at the date of this announcement. This is in summary form and does not purport to be all inclusive or complete. Recipients should conduct their own investigations and perform their own analysis in order to satisfy themselves as to the accuracy and completeness of the information, statements and opinions contained in this announcement. This announcement is for information purposes only. Neither this document nor the information contained in it constitutes an offer, invitation, solicitation or recommendation in relation to the purchase or sale of shares in any jurisdiction.

This announcement may not be distributed in any jurisdiction except in accordance with the legal requirements applicable in such jurisdiction. Recipients should inform themselves of the restrictions that apply in their own jurisdiction. A failure to do so may result in a violation of securities laws in such jurisdiction. This document does not constitute investment advice and has been prepared without taking into account the recipient's investment objectives, financial circumstances or particular needs and the opinions and recommendations in this representation are not intended to represent recommendations of particular investments to particular investments to particular persons. Recipients should seek professional advice when deciding if an investment is appropriate. All securities transactions involve risks, which include (among others) the risk of adverse or unanticipated market, financial or political developments.

No responsibility for any errors or omissions from this document arising out of negligence or otherwise is accepted. This document does include forward-looking statements. Forward-looking statements are only predictions and are subject to risks, uncertainties and assumptions which are outside the control of Auris Minerals Limited. Actual values, results, outcomes or events may be materially different to those expressed or implied in this announcement. Given these uncertainties, recipients are cautioned not to place reliance on forward-looking statements.

Any forward-looking statements in this announcement speak only at the date of issue of this announcement. Subject to any continuing obligations under applicable law and ASX Listing Rules, Auris Minerals Limited does not undertake any obligation to update or revise any information or any of the forward-looking statements in this document or any changes in events, conditions or circumstances on which any such forward-looking statement is based.

Appendix 2

JORC Code, 2012 Edition, Table 1

(Information provided by Sandfire Resources NL)

Section 1: Sampling Techniques and Data

Criteria	JORC Code Explanation	Commentary
Sampling techniques	Nature and quality of sampling (e.g. cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc.). These examples should not be taken as limiting the broad meaning of sampling.	AC samples are collected using spear techniques for both composite and single metre samples. RC samples are collected by a cone splitter for single metre samples or a sampling spear for first pass composite samples using a face sampling hammer with a nominal 140mm hole. Sampling of diamond drilling (DD) includes half or quarter-core sampling of NQ2 core.
	Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.	Sampling is guided by Sandfire protocols and Quality Control (QC) procedures as per industry standard.
	Aspects of the determination of mineralisation that are Material to the Public Report. In cases where 'industry standard' work has been done this would be relatively simple (e.g. 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (e.g. submarine nodules) may warrant disclosure of detailed information.	DD Sample size reduction is through a Jaques jaw crusher to -10mm with a second stage reduction via Boyd crusher to -4mm. Representative subsamples are split and pulverised through LM5. AC and RC samples are crushed to -4mm through a Boyd crusher and representative subsamples pulverised via LM5. Pulverising is to nominal 90% passing -75µm and checked using wet sieving technique. Samples are assayed using Mixed 4 Acid Digest (MAD) 0.3g charge and MAD Hotbox 0.15g charge methods with ICPOES or ICPMS. Fire Assay is completed by firing 40g portion of the sample with ICPMS finish.
Drilling techniques	Drill type (e.g. core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc.) and details (e.g. core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc.).	All AC drilling was completed with a Drillboss 300 with on-board compressor (700cfm at 400psi) using a nominal 90mm diameter air core drill bit. AC drill collars are surveyed using a Garmin GPS Map 64. All RC drilling was completed with a Schramm T685 drill rig using a sampling hammer with a nominal 140mm hole diameter. DD is completed using NQ2 size coring equipment. RC and DD drill collars are surveyed using RTK GPS with down hole surveying. Downhole surveying is undertaken using a gyroscopic survey instrument. All core where possible is oriented using a Reflex ACT II RD orientation tool.
Drill sample	Method of recording and assessing core and	AC, RC and DD sample recoveries are logged and

Criteria	JORC Code Explanation	Commentary
<p>recovery</p>	<p>chip sample recoveries and results assessed.</p>	<p>captured into the database. DD core recoveries are measured by drillers for every drill run. The core length recovered is physically measured for each run and recorded and used to calculate the core recovery as a percentage core recovered.</p>
	<p>Measures taken to maximise sample recovery and ensure representative nature of the samples.</p>	<p>Appropriate measures are taken to maximise sample recovery and ensure the representative nature of the samples. This includes diamond core being reconstructed into continuous intervals on angle iron racks for orientation, metre marking and reconciled against core block markers. Recovery and moisture content are routinely recorded for composite and 1m samples. The majority of AC and RC samples collected are of good quality with minimal wet sampling in the project area.</p>
	<p>Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.</p>	<p>No sample recovery issues are believed to have impacted on potential sample bias. When grades are available the comparison can be completed.</p>
<p>Logging</p>	<p>Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.</p>	<p>AC and RC chips are washed and stored in chip trays in 1m intervals. Geological logging is completed for all holes and representative across the project area. All geological fields (i.e. lithology, alteration etc.) are logged directly to a digital format following procedures and using Sandfire geological codes. Data is imported into Sandfire’s central database after validation in Ocris.</p>
	<p>Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc.) photography.</p>	<p>Logging is both qualitative and quantitative depending on field being logged. All core and chip trays are photographed.</p>
	<p>The total length and percentage of the relevant intersections logged.</p>	<p>All drill holes are fully logged.</p>
<p>Sub-sampling techniques and sample preparation</p>	<p>If core, whether cut or sawn and whether quarter, half or all core taken.</p>	<p>Core orientation is completed where possible and all are marked prior to sampling. Half and quarter core samples are produced using Almonte Core Saw. Samples are weighed and recorded.</p>
	<p>If non-core, whether riffled, tube sampled, rotary split, etc. and whether sampled wet or dry.</p>	<p>AC samples consist of 5m composite spear samples produced from 1m sample piles. Additional 1m sampling is completed depending on results from 5m composite samples or where mineralisation is observed while drilling is occurring. RC 1m samples are split using a cone or riffle splitter. The majority of RC samples are dry. On occasions that wet samples are encountered they are dried prior to splitting with a riffle</p>

Criteria	JORC Code Explanation	Commentary
	<p>For all sample types, the nature, quality and appropriateness of the sample preparation technique.</p> <p>Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.</p> <p>Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field duplicate/second-half sampling.</p> <p>Whether sample sizes are appropriate to the grain size of the material being sampled.</p>	<p>splitter.</p> <p>All samples are sorted, dried at 80° for up to 24 hours and weighed. Samples are Boyd crushed to -4mm and pulverised using LM5 mill to 90% passing 75µm. Sample splits are weighed at a frequency of 1:20 and entered into the job results file. Pulverising is completed using LM5 mill to 90% passing 75µm using wet sieving technique.</p> <p>1:20 grind quality checks are completed for 90% passing 75µm criteria to ensure representativeness of sub-samples.</p> <p>Sampling is carried out in accordance with Sandfire protocols as per industry best practice.</p> <p>The sample sizes are considered appropriate for the VHMS and Gold mineralisation types.</p>
<p>Quality of assay data and laboratory tests</p>	<p>The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.</p>	<p>Samples are assayed using Mixed 4 Acid Digest (MAD) 0.3g charge and MAD Hotbox 0.15g charge methods with ICPOES or ICPMS. The samples are digested and refluxed with a mixture of acids including Hydrofluoric, Nitric, Hydrochloric and Perchloric acids and conducted for multi elements including Cu, Pb, Zn, Ag, As, Fe, S, Sb, Bi, Mo, Re, Mn, Co, Cd, Cr, Ni, Se, Te, Ti, Zr, V, Sn, W and Ba. The MAD Hotbox method is an extended digest method that approaches a total digest for many elements however some refractory minerals are not completely attacked. The elements S, Cu, Zn, Co, Fe, Ca, Mg, Mn, Ni, Cr, Ti, K, Na, V are determined by ICPOES, and Ag, Pb, As, Sb, Bi, Cd, Se, Te, Mo, Re, Zr, Ba, Sn, W are determined by ICPMS. Samples are analysed for Au, Pd and Pt by firing a 40g of sample with ICP AES/MS finish. Lower sample weights are employed where samples have very high S contents. This is a classical FA process and results in total separation of Au, Pt and Pd in the samples. The analytical methods are considered appropriate for this mineralisation style.</p>
	<p>For geophysical tools, spectrometers, handheld XRF instruments, etc., the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc..</p>	<p>For DD and RC drilling downhole Electromagnetic (DHEM) Geophysical Surveys have been completed for Sandfire by Merlin Geophysical Solutions. Geophysical survey parameters include:</p> <ul style="list-style-type: none"> • Merlin Geophysical Solutions MT-200 and MT-400P transmitters, DigiAtlantis probe and receiver • 300m x 300m single turn loop, or as

Criteria	JORC Code Explanation	Commentary
		<p>appropriate to the geological context. Moving Loop Electromagnetic (MLEM) surveys have been undertaken by Merlin Geophysical Solutions with the following parameters.</p> <ul style="list-style-type: none"> Merlin Geophysical Solutions MT-400P transmitters, Monex Geoscope receiver system 200m x 200m single turn loop, or as appropriate to the geological context.
	Nature of quality control procedures adopted (e.g. standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (i.e. lack of bias) and precision have been established.	Sandfire DeGrussa QAQC protocol is considered industry standard with standard reference material (SRM) submitted on regular basis with routine samples. SRMs and blanks are inserted at a minimum of 5% frequency rate.
Verification of sampling and assaying	The verification of significant intersections by either independent or alternative company personnel.	Significant intersections have been verified by alternative company personnel.
	The use of twinned holes.	None of the drill holes in this report are twinned.
	Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.	Primary data is captured on field "tough book" laptops using Ocris Software. The software has validation routines and data is then imported into a secure central database.
	Discuss any adjustment to assay data.	The primary data is always kept and is never replaced by adjusted or interpreted data.
Location of data points	Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.	<p>The Sandfire Survey team undertakes survey works under the guidelines of best industry practice.</p> <p>All AC holes are surveyed in the field using a Garmin GPS Map 64. Estimated accuracy of this device is +/- 4m's .</p> <p>All DD and RC drill collars are accurately surveyed using an RTK GPS system within +/-50mm of accuracy (X,Y,Z). Downhole surveys are completed by gyroscopic downhole methods at regular intervals.</p>
	Specification of the grid system used.	Coordinate and azimuth are reported in MGA 94 Zone 50.
	Quality and adequacy of topographic control.	Topographic control was established using LiDar laser imagery technology.
Data spacing and distribution	Data spacing for reporting of Exploration Results.	<p>First pass AC and drilling is completed at a spacing of 400 m x 100 m.</p> <p>Infill drilling may be completed at 200 m x 100 m dependant on results.</p> <p>In areas of observed mineralisation and adjacent to it, hole spacing on drill may be narrowed to 50m.</p> <p>DD and RC drilling is completed as required to test geological targets. A set pattern is adopted once a zone of economic mineralisation has been broadly defined.</p>

Criteria	JORC Code Explanation	Commentary
	Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.	Data spacing and distribution is not sufficient to establish the degree of geological and grade continuity appropriate for Mineral Resource estimation.
	Whether sample compositing has been applied.	AC and RC samples consist of 5m composite spear samples produced from 1m sample piles. Additional 1m sampling is completed depending on results from 5m composite samples or where visible mineralisation is observed while drilling is occurring.
Orientation of data in relation to geological structure	Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.	There is no significant orientation based sampling bias known at this time in the Morck's Well project area.
	If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.	The drill hole may not necessarily be perpendicular to the orientation of the intersected mineralisation. Orientation of the mineralisation is not currently known. All reported mineralised intervals are downhole intervals not true widths.
Sample security	The measures taken to ensure sample security.	Appropriate security measures are taken to dispatch samples to the laboratory. Chain of custody of samples is being managed by Sandfire Resources NL. Samples are stored onsite and transported to laboratory by a licenced transport company in sealed bulker bags. The laboratory receipts received samples against the sample dispatch documents and issues a reconciliation report for every sample batch.
Audits or reviews	The results of any audits or reviews of sampling techniques and data.	No external audits or reviews of the sampling techniques and data have been completed, on this project.

Section 2: Reporting of Exploration Results

Criteria	JORC Code Explanation	Commentary
Mineral tenement and land tenure status	Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.	The Morck Well project encompasses E52/1672, E52/1613 and E51/1033 which are jointly owned by Auris Minerals Limited (80%) and Fe Limited (20%). Sandfire is currently farming into the project with the right to earn 70% interest in the project area. (Refer to terms of Farm-In Agreement dated 27 February 2018). The adjacent tenement, E52/2049, is part of Enterprise Minerals' wholly owned Doolgunna project, which covers 975km ² . Sandfire is currently farming into the project with the right to earn 75% in the project area (Refer to terms of Farm-In Agreement dated 12 October 2016). The Project is centred ~120km north-east of Meekatharra, in Western Australia and forms part of Sandfire's Doolgunna Project, comprising

Criteria	JORC Code Explanation	Commentary
	<p>The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.</p>	<p>of a package of 6,276 square kilometres of contiguous tenements surrounding the DeGrussa Copper Mine.</p> <p>All tenements are current and in good standing.</p>
<p>Exploration done by other parties</p>	<p>Acknowledgment and appraisal of exploration by other parties.</p>	<p>Aside from Sandfire Resources and Auris Minerals Limited there has been no recent exploration undertaken on the Morck Well Project. Exploration work completed prior to Auris’s tenure included geochemical soil, stream sediment, laterite and rock chip sampling combined with geological mapping. Exploration work on E52/2049 of the Doolgunna Project by Enterprise included a detailed fixed wing airborne magnetic survey in 2007, re-assaying of pulps from a 1km x 1km spaced Maglag geochemical survey in 2009, a heli borne VTEM survey in 2009, 100m x 100m soil sampling and multielement geochemical analysis, and a 400m line spaced Slingram Moving Loop EM (MLEM) survey conducted in 2015.</p>
<p>Geology</p>	<p>Deposit type, geological setting and style of mineralisation.</p>	<p>The Morck Well Project lies within the Proterozoic-aged Bryah rift basin enclosed between the Archaean Marymia Inlier to the north and the Proterozoic Yerrida basin to the south.</p> <p>The principal exploration targets in the Doolgunna Project area are Volcanogenic Massive Sulphide (VMS) deposits located within the Proterozoic Bryah Basin of Western Australia. Secondary targets include orogenic gold deposits.</p>
<p>Drill hole Information</p>	<p>A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:</p> <ul style="list-style-type: none"> ○ easting and northing of the drill hole collar; ○ elevation or RL (Reduced Level – elevation above sea level in metres); ○ of the drill hole collar; ○ dip and azimuth of the hole; ○ down hole length and interception depth; and ○ hole length. <p>If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract</p>	<p>Refer to Tables 1-6 in the main body of this release.</p>

Criteria	JORC Code Explanation	Commentary
	from the understanding of the report, the Competent Person should clearly explain why this is the case.	
Data aggregation methods	In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (e.g. cutting of high grades) and cut-off grades are usually Material and should be stated.	Significant intersections are based on a cut-off grade of 0.1% Cu and/or 0.1ppm Au and may include up to a maximum of 3m of internal dilution. Cu and Au grades used for calculating significant intersections are uncut.
	Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.	Reported intersections are based on 5m samples from AC drilling.
	The assumptions used for any reporting of metal equivalent values should be clearly stated.	No metal equivalents are used in the intersection calculation.
Relationship between mineralisation widths and intercept lengths	These relationships are particularly important in the reporting of Exploration Results.	Downhole intercepts of mineralisation reported in this release are from a drillhole orientated approximately perpendicular to the understood regional stratigraphy. The drillhole may not necessarily be perpendicular to the mineralised zone. All widths are reported as downhole intervals.
	If the geometry of the mineralisation with respect to the drill-hole angle is known, its nature should be reported.	The geometry of the mineralisation, relative to the drillhole, is unknown at this stage.
	If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (e.g. 'down hole length, true width not known').	All intersections reported in this release are downhole intervals. True widths are not known at this stage.
Diagrams	Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.	Appropriate maps are included within the body of the accompanying document.
Balanced reporting	Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.	The accompanying document is considered to represent a balanced report.
Other substantive exploration data	Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics;	Downhole Electromagnetic Surveying was completed by Merlin Geophysics. Details for the configuration of the survey can be seen in Appendix 1 of this release.

	potential deleterious or contaminating substances.	
Further work	The nature and scale of planned further work (e.g. tests for lateral extensions or depth extensions or large-scale step-out drilling). Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.	Additional work including additional drilling, downhole geophysics and surface geophysics is being planned.
