

FROM SUCCESSFUL EXPLORATION TO DEVELOPING A MINE

AGM Presentation 2015

- 1. HIGHLIGHTS
- 2. THE COMPANY
- 3. THE PROJECT
- 4. THE IRON ORE CONCENTRATE MARKET
- 5. THE PROJECT KEY ELEMENTS

HIGHLIGHTS

The RESOURCE:

- ➤ The largest internationally recognized JORC compliant Resource of 254Mt (Measured and Indicated) in Mongolia.
- > Ideally located in the premier iron ore region with power, water and logistics.
- > Necessary base for delineating and estimating Proven and Probable Ore Reserves for developing a Mine.
- > Resource supports a 5mtpa > production rate.

The COMPANY:

- > Transitioning into a Development Production phase from a successful Exploration phase.
- ➤ Raised \$1.8m which will enable the Company to move forward and complete arrangements with traders to fund and develop the deposit.
- > Restructure of the Company to move towards an operating mind set that is cost efficient.
- > Pre-Mining Agreement with the Mineral Resource Authority of Mongolia is signed.
- ➤ The Mining License is expected to be granted within Q2 2015.
- > Key milestones towards completing the Project Feasibility Study are being achieved.
- ➤ A quality product with specifications suitable for Chinese steel mills is attainable and well tested which supports the project funding.
- Further work to optimize an initial ramp up of mine operation to achieve early production and cash flow is underway.

*Pre-Mining Operation Agreement (PMA) License

MELs are located within a potential geological settings & structural zone for iron ore

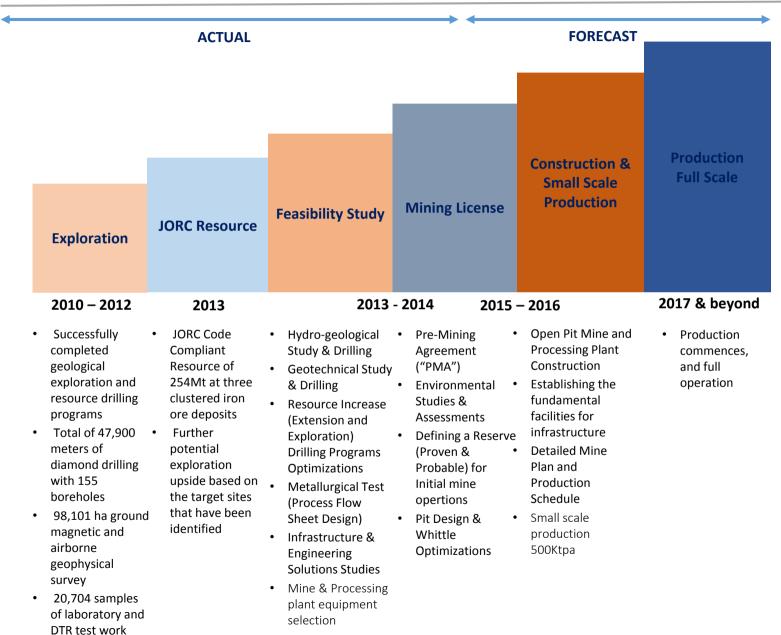

THE PROJECT

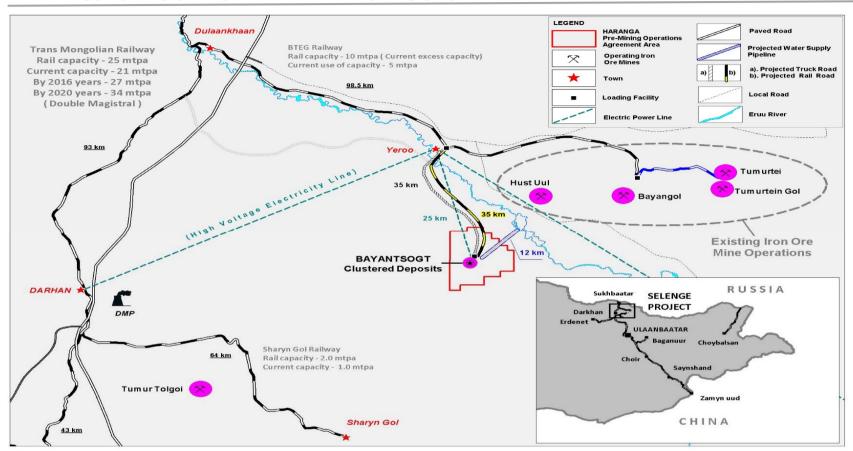

- Completion of Mongolian standard Feasibility Study to secure a Mining License;
- Ecological and Economical Assessment is required;
- Grant of Mining License;
- Completion of Hydro-Geological and Geotechnical Studies when necessary and required by a turn-key Contractors.

THE PROJECT LOCATION AND INFRASTRUCTURE MAP

The Project is ideally located in Mongolia

- Access to established infrastructure such as Railroad, Electricity and Water supply
- Existing iron ore producing mines in close proximity with a proven track record in exporting to China.

The Project is located in Mongolia's premier iron ore development region of Darkhan-Selenge which has existing access to the main Trans-Mongolian Rail Line and nearby spurs as well as the industrial hubs of the Darkhan Uul and Selenge provinces where key infrastructure such as road and communication, electricity and water supply are relatively well developed with excellent access to the existing railway.

Haranga is aiming to become one of the strategic players in iron ore production and export operations in Mongolia.

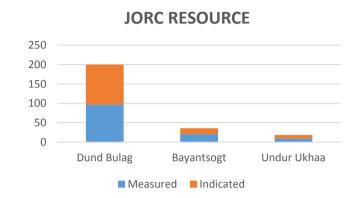

THE LARGEST JORC COMPLIANT RESOURCE IN MONGOLIA

JORC RESOURCE (MEASURED & INDICATED)

/Million tons: Cut-off = 12.5% Fe/

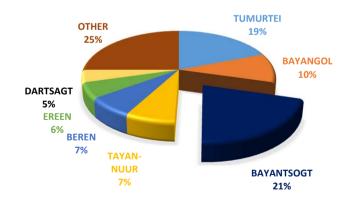

,					
Deposit	Measured	Indicated	Total		
Dund Bulag	96.4	103.5	199.9		
Bayantsogt	20.7	15	35.7		
Undur Ukhaa	9.3	8.9	18.2		
TOTAL	126.4	127.4	253.8		

The delineation of a Resource on the Measured & Indicated categories is sufficient to use as a basis for estimating Proven and Probable Ore Reserves for undertaking the Project Feasibility Study.

THE LARGEST JORC COMPLIANT RESOURCE IN MONGOLIA

RESERVES	Million ton
TUMURTEI	229
BAYANGOL	124
BAYANTSOGT (HARANGA)	254
TAYAN-NUUR	88
BEREN	84
EREEN	67
DARTSAGT	53
OTHER	330
TOTAL	1.2 BILLION TONS

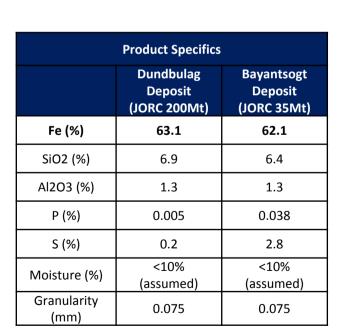

Haranga currently holds about 20% of the total registered iron ore resource in Mongolia.

THE IRON ORE CONCENTRATE MARKET

- METALLURGICAL TEST PROVEN
- LOWER IMPURITIES
- ❖ SUITABLE FOR CHINA MARKET SPECIFICATIONS FOR STEEL PRODUCERS

Banded Magnetite Skarn (BMS)

Dunbulag and Bayantsogt deposit iron ore concentrates extracted from metallurgical tests

The Result of the Metallurgical Test

Metallurgical Test work and Results at the Iron Ore Technical Centre at ALS in Wangara, Western Australia

A total of 400,1 kg of samples including 196,9 kg of samples representing the Bayantsogt Deposit and 203,2 kg of samples representing the Dund Bulag Deposit were prepared and delivered to ALS for testing.

Summary Results of the Two-stage Grinding Wet Magnetic Separation Test (P80 250μm and P80 75 μm)

Deposit names	Final stage Mass Yield %	Grade, Fe%	Final stage Recovery %
Dund bulag	67.4	63.1	93.9
Bayantsogt	67.6	62.1	88.6

Summary Results on the Quality and Impurities in the Product of Iron Concentrate

Deposit names / JORC Measured & Indicated	Fe. %	SiO2, %	S, %	Al2O3, %	P, %
ivieasureu & muicateu	ге, <i>7</i> 0	3102, /0	3, /0	A12U3, /0	P, /0
Resource					
Dund Bulag (199.9Mln tons)	63.1	6.9	0.2	1.38	0.005
Bayantsogt (35.7Mln tons)	62.1	6.4	2.8*	1.33	0.038

^{*} LIMS/Flotation test result

The metallurgical test results demonstrate a magnetite concentrate of marketable specification with high iron grade and low impurities suitable for Chinese steel producers.

Where the steel mills can accept the product with the Specifications the Company can deliver;

TARGET REGIONS IN CHINA:

Where low grade iron ore mines are operating that are similar to the Project in terms of cost structure;

Where the rail transportation distance is preferably within the range of <1000 km from the Mongolian – Chinese border crossing point aiming to reduce the rail cost to inland China.

China Market Specifications of Iron Ore and Fe Concentrate

Market research shows that the accepted quality of concentrate into the North China steel mills appears to be 62-66% Fe, Sulphur <0.1%, and Silica < 7%. The below table shows n detail the market specifications for iron concentrate traded in China:

	MBIOI-62	MBIOI-58	MBIOI-58P (High specification)	
Price	US\$ per dry metric ton, CFR China	US\$ per dry metric ton, CFR China	US\$ per dry metric ton, CFR China

Publication	Daily at 7pm Singapore time	Daily at 7pm Singapore time	Daily at 7pm Singapore time	

The MBIOI-62 (Metal Bulletin Iron Ore Index) is a benchmark price representing the iron ore fines market. All transaction data within the specification maximums below, are normalized to the base specification based on the value-in-use implied by the market. The MBIOI-62 is a daily index published at 7pm Singapore time.

The **MBIOI-58** is a price representing a growing part of the iron ore fines market. All prices s within the specification maximums below are normalized to the base specification based on the value-in-use implied by the market.

The **MBIOI-58P** is a daily index published at 7pm Singapore time. In Addition to the MBIOI-58, Metal Bulletin publishes a daily differential premium for the 58% Fe high specification; low alumina and phosphorous material (MBIOI-58P). The daily indicates are rounded to two decimal places. the premium is rounded to the nearest \$0.50. The figure representing the combined MBIOI-58 and High Specification Premium is the 58% Fe premium Index.

CHINA MARKET

Iron Ore Mines in China

Cost Structure:

Low Cost

Low cost mines with below RMB350/t (USD55/t) accounting for only 15% of the nations total.

Medium Cost

Medium cost mines with RMB350 - 630/t (USD55-100/t) taking **up 60**% of the nations total.

High Cost

High cost mines with over RMB630/t (USD>100/t) occupying 25% of the total iron ore production.

Grade Structure:

High Grade

Low Grade

High grade iron ore mines account for only about 20% of the nations total iron ore production.

Low grade iron ore mines account for about 80% of nations total; and a low

level of development whereas production costs are high, and need for improving the technology and

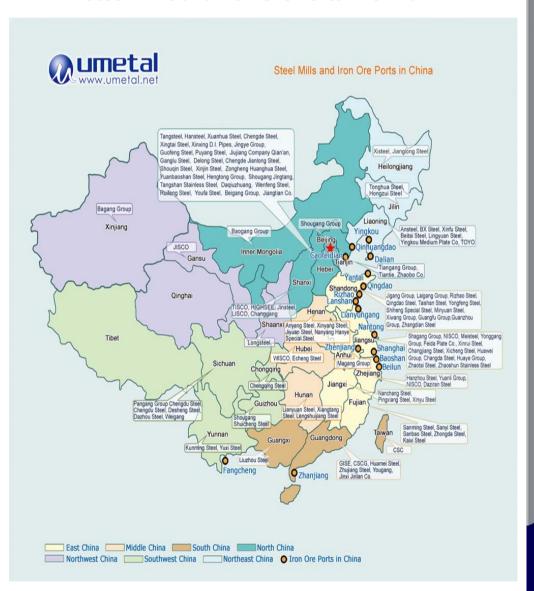

for improving the technology and upgrading the equipment of processing; "blending" is required in order to improve the efficiency of using a low grade material.

Steel Mills and Iron Ore Ports in China

RAIL & LOGISTICS – INLAND CHINA

The following 3 steel mills in China are within the approximate 1000 km distance radius from the Mongolian – Chinese border crossing point of Zamiin Uud with estimated rail costs per ton as follows:

1. Ba	otou (Inner Mongolia) 635 km

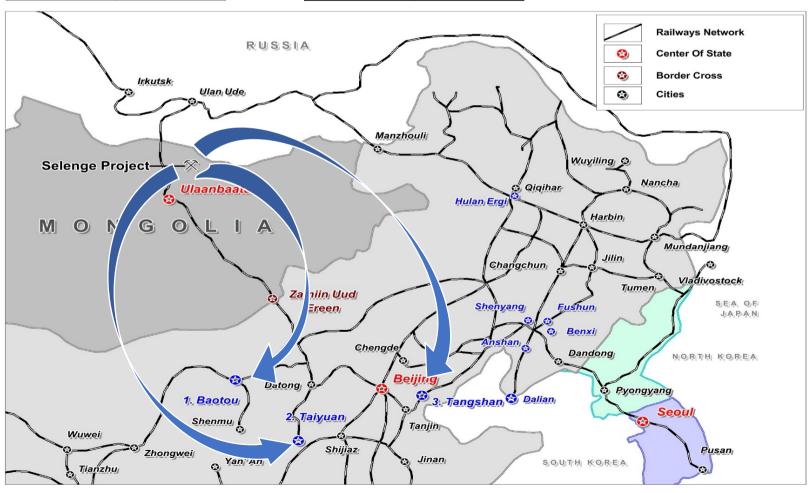

60 ton wogan, (RMB)	USD per ton	
6623.9	17.78	

2. Taiyuan (Shanxi) 760 km

60 ton wagon, (RMB)	USD per ton	
7791.0	20.91	

3. Tangshan (Hebei) 830 km

60 ton wagon, (RMB)	USD per ton	
11300.0	30.33	

POTENTIAL TARGET STEEL MILLS

Potential customer steel mills identified in Northern China region:

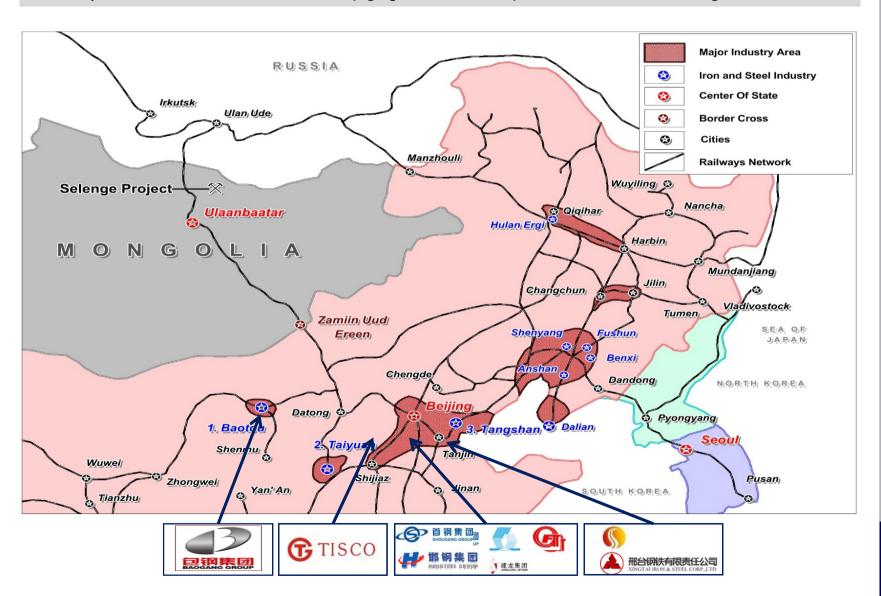

Potential Customer	Province	Approx Output Mtpa
Shougang Group	Hebei	15
TISCO Talyuan Iron & Steel (TISCO)	Shanxi	10
Tangsteel/ Hansteel Group (TISCO)	Hebei	8
HebeiJinxi Steel	Hebei	-
Tianjin Iron & Steel	Tianjin	10
Baotou Iron & Steel	Inner Mongolia	-
♪ u.z.x.k.ii Jianlong Steel	Hebei	6.5
派合解扶有限责任公司 Xingtal Iron & Steel	Xingtai	-
G Tangshan Guofeng Iron & Steel	Hebei	11

LOCATIONS OF POTENTIAL TARGET STEEL MILLS

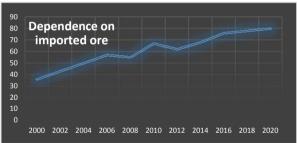

Below map shows the location of Chinese steel mills (highlighted s in blue color) within <1000 km from the Mongolian-Chinese border.

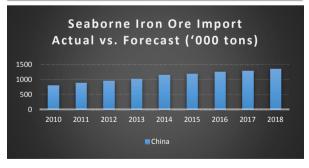

Dependence on Imported Iron Ore

Dependence on Imported Iron Ore

The domestic mines with operation cost of USD 80 – 100/t account for ever 80% of the total domestic market.

It is forecasted that the iron ore price shall be stabilized within the next 2-3 years and 2017 onward will range within USD 80 -100/t averaging at 90\$/t.

Total domestic iron raw ore ROM production is about 1.45 billion tons. However, due to a low grade and poor cost competitiveness to seaborne ore and given the weak iron ore price, the domestic ore to be forced out.

Total seaborne imported iron ore reached 790 million tons. Land transported imported ore 30 million tons. International iron ore supplies have been increasing gradually.

The domestic iron ore production in Fe concentrate shall be about 300 million tons and the imported ore is approximately 1 billion tons. The dependence on imported iron ore is not likely to be changed in a short term. Chinese steel mills will likely to continue to "go abroad" to secure industrial raw material sources.

THE PROJECT KEY ELEMENTS

SECURING THE MINING LICENSE

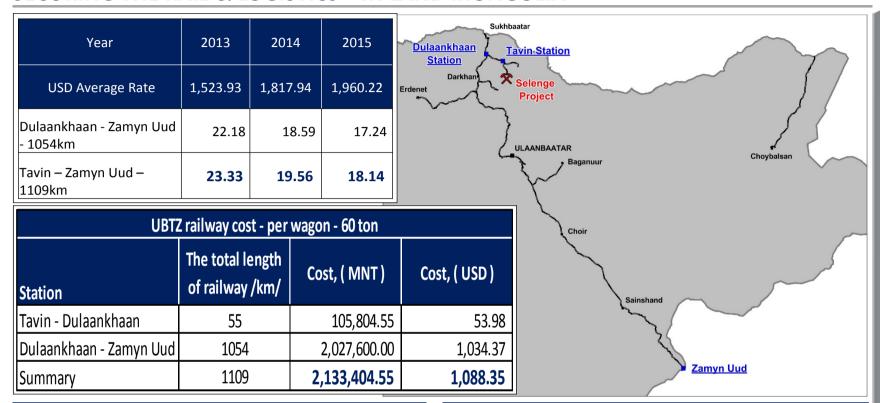

PROJECT KEY ELEMENTS:

SECURING RAIL CAPACITY & LOGISTICS

SECURING THE APPROPRIATE ORE BLEND VIA
AMALGAMATIONS WITH OTHER IRON ORE OPERATORS IN
MONGOLIA

SECURING THE RAIL & LOGISTICS – IN LAND MONGOLIA

Preliminary Discussions with the Government Authorities

Preliminary Discussions with the Logistics Provider and Railway Owner

In August 2012, the Company's 80% owned Mongolian subsidiary, Haranga Khuder LLC (HH), signed a Memorandum of Understanding (MOU) with the relevant government authorities to enable the allocation of up to 5Mtpa of export rail capacity for iron ore and concentrate produced from the Project from 2015 onwards.

In addition, in January 2015, the Company reached another MOU with Ulaanbaatar Railway, the Mongolian – Russian JVC, which owns the Trans – Mongolian Railroad that connects Russia, Mongolia and China. Recent discussions with UB Railway proved that it can commit in supporting to provide locomotives and wagons for HAR iron concentrate export operations.

COMPETENT PERSONS' STATEMENTS AND DISCLAIMER

The technical information contained in this presentation in relation to the JORC Code 2012 Compliant Resource for the Selenge Project has been reviewed by Mr Peter Ball of Data Geo Ltd, who is a member of the Australasian Institute of Mining and Metallurgy. Mr Ball has sufficient experience relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Mineral Resources and Ore Reserves'. Mr Ball consents to the inclusion of the matters based on his information, and information presented to him, in the form and context in which it appears. Refer to the HAR ASX announcement dated 7 May 2013 for further details.

Mr. Aden Ta, who represents the ALS Iron Ore Technical Centre in Wangara in Western Australia, consents to the inclusion in this report of the matters based on his information, and information presented to him, in the form and context in which is appears.

This presentation includes certain 'forward looking statements'. All statements, other than statements of historical fact, are forward looking statements that involve various risks and uncertainties. There can be no assurances that such statements will prove accurate, and actual result and future events could differ materially from those anticipated in such statements. Such information contained herein represents management's best judgment as of the date hereof based on information currently available. The company does not assume the obligation to update any forward-looking statement.
