DUBBER NOW AVAILABLE FOR COMMANDER CUSTOMERS

- **M2 partners with Dubber to offer call recording for Commander**
- **Deployment is via M2 Telecommunications' Broadsoft platform**
- **Commander customers can now access call recording on a monthly subscription basis**

Dubber Corporation Limited (ASX: DUB) ("Dubber") is pleased to announce that Dubber, the native cloud call recording platform, and Commander have partnered to provide smart business telecommunications solutions to customers who require call recording.

Customers who connect to **M2 Telecommunications' Commander** network can now access Dubber's call recording as a feature on a monthly subscription basis.

Commander is the IP 'hosted voice' retail brand of **M2 Telecommunications (ASX: MTU)**, which offers leading edge telecommunication solutions to business users in Australia.

Steve McGovern, Managing Director of Dubber said:

"We are pleased to have Dubber deployed onto M2's Commander network. This is thanks to the accreditation of Broadsoft's interoperability with Dubber, which was finalised in May.

"Dubber's interoperability with Broadsoft will revolutionise the way businesses think about recording and the 'voice asset' in general as the Dubber platform is purpose built for unlimited scalability, thereby enabling telcos flexible recording options for their entire customer base."

About Dubber

The Dubber technology suite provides call recording and audio asset management in the cloud. Recording will be available across all devices and is instantly accessible for many and varied user cases.

Dubber will surpass the limitations of existing systems, enhance the benefits and simplify the ability of all potential users to record calls.

Dubber is a transformative cloud based software technology in a multi-billion dollar hardware centric market place. It provides enhanced service and is flexible to a myriad of applications not easily achievable with current market solutions. These benefits include immediate access to the call recording at any time from any location and the ability to asset manage and utilize recordings within existing enterprise systems as is the case for other forms of content, but largely not for voice recording, until now.
