DUBBER RELEASES “DUBBER LAB” FOR TELCOS

- **Dubber Lab provides instant connectivity For telco partners worldwide**
- **Revolutionises how call recording is deployed on networks**
- **Significantly advances telco strategy via Broadsoft**

Dubber Corporation Limited (ASX: DUB) (“Dubber”) is pleased to announce that following Dubber’s accreditation with Broadsoft, announced on 4 May 2015, Dubber has today released its “Dubber Lab” for Broadsoft partners.

Dubber Lab enables telecommunications and service providers to connect to the Dubber platform within hours for testing and migrate seamlessly into a production environment without traditional technical hurdles or requirements.

Steve McGovern, CEO of Dubber, said:

“As part of our recent telco roadshow into, Asia and Europe, we were able to demonstrate exactly how minimally disruptive the Dubber technology is, in an industry dominated by traditional players.

“For a telco, connecting call recording across their network invariably involves significant capital expenditure for hardware licenses, productisation and commitment to support infrastructure.

“With Dubber, a telco can now connect call recording onto its network within hours at no cost.

“The transformation to a production environment can, similarly, take place instantly via a commercial agreement with Dubber.

“Dubber has already received interest from international telcos to connect to the Dubber Lab and we anticipate this release to assist in rolling out Dubber to the over 500 Broadsoft platform partners worldwide.”

Dubber’s native cloud solution is transforming the call recording market, opening up new user cases and enhancing existing ones at a fraction of the cost base.

About Dubber

The Dubber technology suite provides call recording and audio asset management in the cloud. Recording will be available across all devices and is instantly accessible for many and varied user cases.

Dubber will surpass the limitations of existing systems, enhance the benefits and simplify the ability of all potential users to record calls.

Dubber is a transformative cloud based software technology in a multi-billion dollar hardware centric market place. It provides enhanced service and is flexible to a myriad of applications not easily achievable with current market solutions. These benefits include immediate access to the call recording at any time from any location and the ability to asset manage and utilize recordings within existing enterprise systems as is the case for other forms of content, but largely not for voice recording, until now.
