Productora PFS Advancing Towards Completion

Hot Chili (ASX: HCH) is pleased to announce that the majority of key work streams for the Pre-feasibility Study (PFS) on its Productora copper project in Chile are completed.

The Company now expects to finalise the Productora PFS in the New Year in co-operation with its joint venture partner Chilean resources major Compañía Minera del Pacífico S.A. (CMP).

Hot Chili is currently finalising the open pit mine design, which will enable an expanded Ore Reserve and Mineral Resource estimate to be calculated and incorporated into the final PFS.

Study results to date have indicated significant improvements to key project parameters.

Hot Chili is also refining its exploration targets in preparation for drill testing a series of large-scale porphyry targets identified immediately adjacent to Productora's planned central pit.

Productora's porphyry resource growth potential will be central to the Company's plans during 2016 to capture further scale and mine life in advance of a decision to mine.
