

DTI to Provide CCTV Surveillance Systems to Wrightbus for City of Dublin

15 March 2016 – DTI Group Ltd (ASX: DTI) ("DTI") is pleased to advise that it has received an order from leading vehicle manufacturer Wright Bus Ltd ("Wrightbus") for the supply of advanced CCTV surveillance systems for 80 double deck vehicles ordered for the City of Dublin.

Each vehicle will be equipped with:

- DTI's advanced MDR6 digital surveillance system with integral switching, enhanced 'dual drive' redundancy and communications infrastructure for system management and data downloads
- 12 external and internally mounted cameras including high-definition IP forward-facing and both high-definition IP and analogue internal cameras.

The DTI solution will be supplied with full Wi-Fi, 3G/4G 'live' streaming and GPS capability. The project will also cater for DTI's comprehensive back-end CCTV management system to centralise and coordinate the CCTV data and allow video evidence and system diagnostics to be recovered from the vehicles through an on-line automated CCTV 'booking' system.

DTI's in-house hardware and software engineers have designed a system which provides a number of innovative options to enhance and increase both IP and analogue camera counts together with on-board storage without the need to install additional infrastructure on the vehicle.

DTI's Managing Director, Richard Johnson, commented: "The selection of the DTI solution by Wrightbus is DTI's first order with Wrightbus and closely follows our win last month in Dublin with Irish Rail. This order once again further builds on DTI's growing strength in Europe and around the world for providing advanced surveillance and information technology solutions and services in the mass transit market. Dublin now becomes another city that has DTI solutions operating across rail and bus networks joining the likes of Perth, Adelaide, Brisbane, Philadelphia, and San Francisco."

"We are pleased with the early endorsement of our latest 6th generation MDR6 digital surveillance system. DTI is committed to ongoing product and system development to provide transit sector customers with the most technologically advanced surveillance solutions available in the world", he said.

About DTI Group

DTI develops and provides world-leading surveillance and commuter communication systems technology and services to the mobile transit industry worldwide. Core technology development and system design activities are undertaken from the Company's head office.

About WrightBus

Wrightbus is one of Europe's leading designers and manufacturers of advanced public transport vehicles. For nearly 70 years, Wrightbus has earned a reputation for producing vehicles which excel in style, quality and reliability.

Wrightbus prides itself on commitment to its customers and service which exceeds expectations and integrity in everything the company does. Wrightbus designs and manufactures buses for the European market, including the United Kingdom and Republic of Ireland. The Wrightbus product range covers all segments of the market from small and midi-sized buses to full-size single deckers, double deckers and articulated buses and Bus Rapid Transit.
