Urbanise platform up and running in Putrajaya

Urbanise.com Limited (Urbanise) (ASX:UBN) announces that its building services delivery platform is operational in the Malaysian Prime Minister's LEED Platinum building. The technology is being used to monitor and report on the energy performance of key systems against energy efficiency benchmarks.

Urbanise CEO Ben Churchill said, *"Last week I was in Malaysia to see the Malaysian Prime Minister presented with GBI Platinum certification for the building that houses his office. Our Malaysian partner, KFM Holdings, was responsible for delivering this major sustainability project. During the presentation, the Urbanise platform allowed me to monitor the live energy consumption for the greenest building in Malaysia from my smartphone."*

In July, Urbanise announced that that Integrated Facility Management Services and Consulting Company KFM Holdings (KFM) would become a regional partner for Malaysia. Under the three-year agreement, KFM plans to provide the Urbanise platform to some of the largest smart city projects in Malaysia – including Putrajaya and Iskandar.

At the time, KFM Group CEO Nurolamin Abas said of the Urbanise partnership, *"We are always looking for new and innovative technologies to increase functionality in the built environment and integrate people, place and process. The Urbanise platform makes it possible to fuse the 'Internet of Things' with the 'Internet of People' for the built environment – enabling an entirely new level of community and asset management."*

About KFM
