

Announcement

New Product – Quarry XPAC Solution

6 May 2015

RungePincockMinarco Limited (ASX: RUL) [RPM] has today launched its Quarry XPAC Solution™ a Commodity Based Solution focused on scheduling in the cement and aggregates quarrying industry.

RPM's Quarry Solution is a Commercial-Off-The-Shelf (COTS) product that is configured to the specific requirements of the quarrying industry with a specific focus on cement and aggregates. This product, like the other RPM Commodity Based Solutions, is built on RPM's industry leading scheduling solution, XPAC® and uses a standard, process driven interface to make quarry planning activities much easier to master and more cost effective to maintain.

Commenting on the release, Richard Mathews RPM's CEO and MD said "It has been quite easy for us to move into the cement and aggregates quarrying industry given its similarities to mining. We have found that our extensive knowledge of mining and mine scheduling has made this extension to our product offering very straight forward."

"For the first time, quarry planners will have access to a streamlined, simplified, interactive and process-driven solution that provides scheduling visibility across the quarry with the ability to react to changes in product delivery schedules and evaluate multiple scenarios to achieve optimal exploitation of the quarry deposits."

"When schedulers can get to the job of scheduling more quickly, they can spend their time comparing and analysing different options including blending capabilities to get the best out of their quarry in the most time and cost effective manner. This affords the scheduler and consequently the quarrying company a deeper understanding of what the quarry is actually capable of."

RPM's Quarry Solution integrates with RPM's mine haulage software HAULSIM and financial modelling tool XERAS. Consistent with RPM's enterprise software strategy RPM's Quarry Solution also integrates with enterprise systems such as SAP to provide quarry planners the ability to pull product delivery targets directly into the production plan.

The launch of RPM's Quarry Solution is the sixth commodity based solution in the RPM suite, following on from the Open Pit Diamonds (OPDS) and Oil Sands (OSS) solutions released in 2014 and the releases in 2013 of RPM's Open Pit Metals (OPMS), Open Cut Coal and Underground Coal commodity mining solutions.
