30 October 2015

SEPTEMBER 2015 QUARTERLY ACTIVITIES & CASHFLOW REPORT

Key Points:

- **Metallurgical program commenced at Copper Hill copper-gold project**
- **PFS infill drilling program prepared for Copper Hill**
- **R&D refund and interim interest-free loans received**
- **Drill targeting programs to commence at Cargo copper-gold project**

CORPORATE

The raising of capital to fund a Pre-Feasibility Study (**PFS**) on a 2-3 million tonne per annum mining and processing operation at Copper Hill was the key focus of activities during the quarter. The Company explored a range of capital raising options. A fully funded proposal with a combination of a rights issue and placements was approved by the Board but placed on hold following the calling of an Extraordinary General Meeting (**EGM**) by Mr Ian Buchhorn, who nominated three additional non-executive directors to board.

Shareholders voted at the EGM held on 22 October 2015 to elect Neil Fearis, Robert Thomson and Mark Sykes as directors. The Board composition now complies with ASX guidelines in respect of having a majority of independent directors and has the complementary skills and experience to advance the Copper Hill Project and generate value for all shareholders.

On 23 September the Company announced the receipt \$835,000. Funds consisted of an R&D refund of approximately \$535,000 from the Australian Tax Office (ATO) and interim funding totalling \$300,000 in the form of interest-free loans from Mr Ian Buchhorn and HQ Mining Resources Holding Pty Limited (**HQ Mining**). These funds are being used to commence a Pre-feasibility Study (PFS) metallurgical program.

Immediately following the EGM, the Company received a letter from HQ Mining on 22 October advising of its intention to make a takeover bid for the Company at \$0.07 per share subject to certain conditions. The Board has advised shareholders to take no action until directors are able to ascertain whether HQ Mining intends to proceed with a formal takeover offer.

At the end of the quarter the Company's cash reserves totalled approximately \$584,000 including \$150,000 from the loans noted above. The remaining \$150,000 of loan funds were received in early October.

The Company will be relocating to smaller offices in North Sydney to reduce costs and facilitate improved investor relations and industry.

PROJECT DEVELOPMENT

Copper Hill Project

The Company is focused on optimising the key drivers to value as part of the Copper Hill Scoping Study. An essential component of the optimisation process is validating the copper and gold recoveries scheduled during the initial 9-12 year mine life. The Company has approved funding for additional metallurgical testwork to be performed on samples that will better reflect the ore types and grades processed during the early years of mine production. The programs as follows have commenced.

Metallurgical Testwork

Detailed geometallurgical analysis was completed during the quarter, aiming to identify specific Copper Hill mineralisation styles and to correlate these with previous metallurgical results. In particular, drill hole GCHD474, completed in 2014, was identified as hosting an attractive mineralisation style suitable for treatment by flotation, and is representative of the 0.4% copper cut-off grade resource.

The bulk samples for the metallurgical program were prepared during the quarter. Samples were maintained in refrigerated storage to minimize any ageing (oxidation) prior to commencement of the testwork.

Subsequent to the end of the reporting period, a “sighter” testwork program commenced at the Stimulus metallurgical laboratories in Perth. The testwork, designed to improve flowsheet design, will be completed on five core samples totalling approximately 130 kg from GCHD 474. The samples have been despatched to the laboratory. The program involves;

- Grinding and floatation tests on mineralisation types typical of those expected during the initial 5-10 years of operation using the 2015 Scoping Study optimum pit. This will include initial sighter tests to determine the preferred process conditions followed by tests on all samples using these conditions.
- Assess the value of potential pre-concentration processes for upgrading lower grade ores. This will build on known mineral and physical characteristics and differentiators of the mineralisation and waste material and utilise existing mineral processing methodologies, albeit customised for the Copper Hill mineralisation. These processes include magnetic separation and differentiation on the basis of material densities and/or chemistry.

Results are anticipated to flow progressively during the remainder of the December quarter.

Drilling

A two-stage drilling program has been prepared which includes an initial two holes to confirm and extend the high grade mineralisation intersected in the 2014 drilling with a focus on the excellent results returned from holes GCHD 470 and GCHD 474. These holes are expected to improve the definition of the high grade mineralisation and provide key samples for the next stage metallurgical testwork.

The second stage of the program is conditional on proceeding with the PFS and involves infill drilling to enable the upgrade of the near surface high grade resources within the optimised pit to at least Indicated Mineral Resource status as well as testing extensions to the identified high grade mineralisation. This program is expected to involve approximately 3,000 metres of diamond core drilling and will provide samples for the PFS metallurgical testwork and key geotechnical data for the PFS mining studies.

In addition, field activities during the quarter were restricted to essential drill-site rehabilitation works due to the limited funds prior to receipt of the R&D refund. Office-based programs were rationalised to minimise costs and focus on planning activities for the PFS.

Forward Plan and Budget

The Company has developed a forward work plan for the completion of a PFS to support a 2Mtpa to 3Mtpa development at Copper Hill. This program includes infill drilling, metallurgical testwork, mining and closure studies, hydrological evaluation, processing studies, baseline

environmental programs, infrastructure requirements, product transport and realisation components, PFS-level engineering, determining other project development components necessary such as environmental approvals and mining lease applications and development of a preliminary project timeline for development should the PFS confirm a potentially viable development. This PFS is expected to be completed 9 to 12 months from securing funding.

Regional Exploration Potential

The Ordovician-aged Macquarie Arc consists of several volcanic belts which host the world-class porphyry copper-gold deposits currently being mined at Cadia (Newcrest), Northparkes (China Molybdenum) and Cowl (Evolution). The Molong Volcanic Belt hosts significant porphyry gold-copper deposits at Cadia Quarry, Cadia East, Ridgeway (Newcrest), Cargo (GCR) and Copper Hill (GCR), and skarn gold \pm copper deposits at Browns Creek and Junction Reefs, as shown in Figure 1.

Porphyry copper-gold deposits of the Copper Hill area occur within the corridor formed by the WNW trending Lachlan Transverse Zone (LTZ). Accordingly, GCR tenements within this strongly mineralised area are regarded as highly prospective for copper-gold.

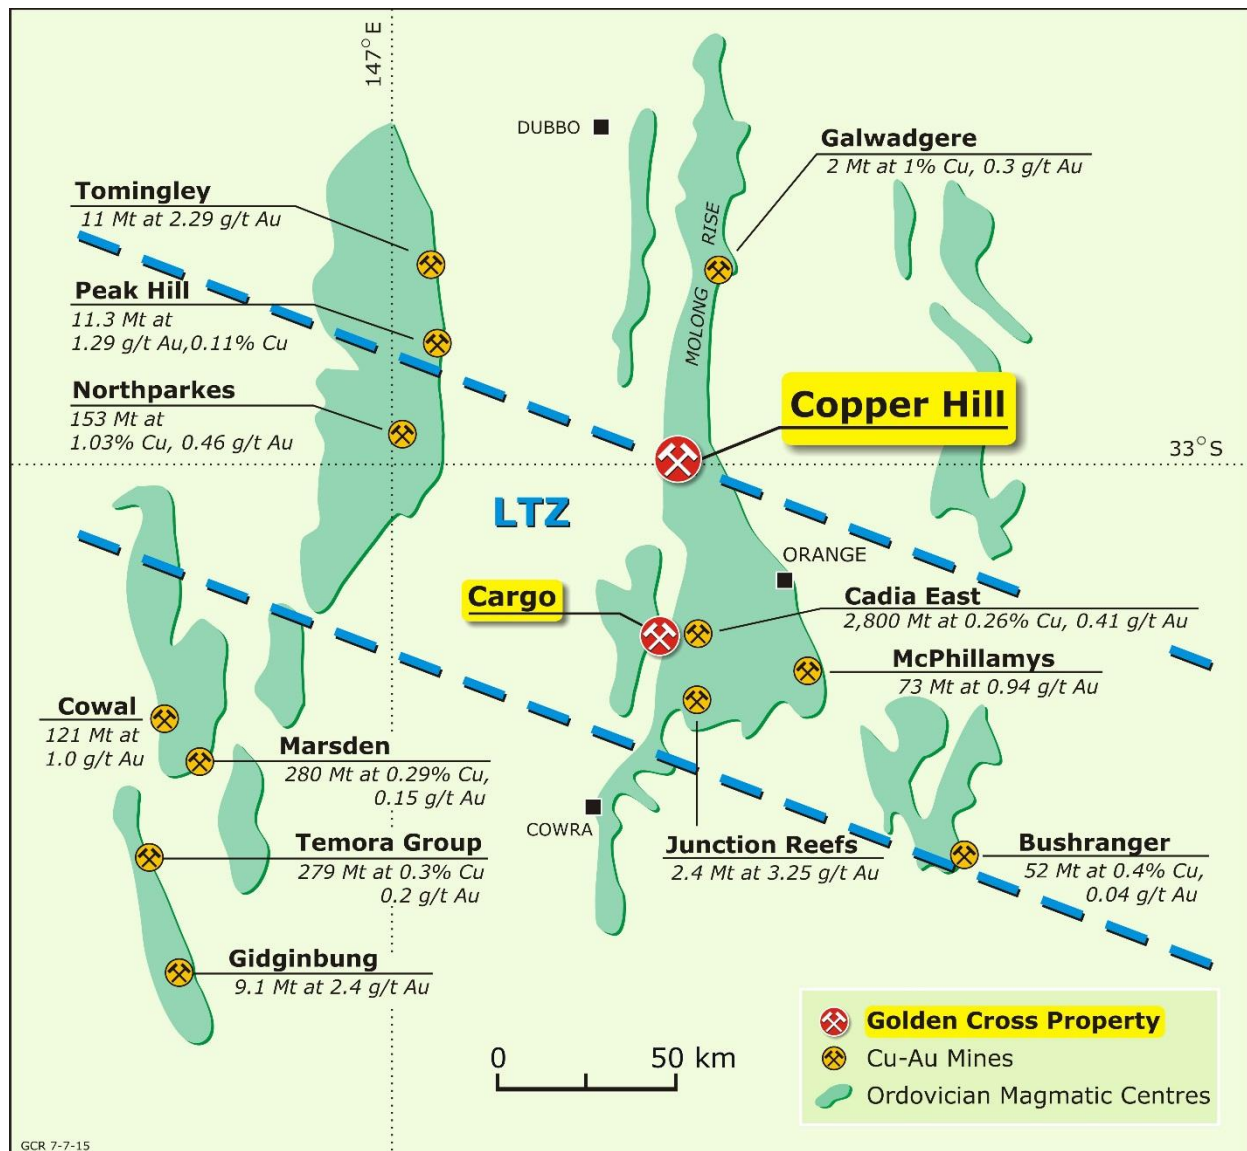

Figure 1: Regional setting of Copper Hill

Copper-gold mineralisation at Copper Hill is hosted in a Crowded Tonalite Porphyry wall-rock. Two distinct styles of wall-rock mineralisation are recognised, associated with multiple porphyry intrusive phases and alteration zonations typical of porphyry systems.

- 1 The earliest mineralised phase is related to sericite-pyrite-quartz “phyllic” alteration and has a distinctive geochemical association, peripheral to source porphyry intrusive, hosting chalcopyrite mineralisation with a molybdenum-rhenium-zinc association.
- 2 The later stage overprinting mineralisation has distinctive and intense quartz (-magnetite) “potassic” alteration zonation and sheeted veins, being close to the source porphyry intrusive, and hosting chalcopyrite-bornite mineralisation with associated high gold.

The parent porphyry intrusive responsible for the later stage high-grade “potassic” wall-rock gold-copper mineralisation is interpreted to be younger and deeper and yet to be intersected in drill holes and provides discovery potential at depth below Copper Hill and Wattle Hill for high grade pipes-style deposits similar to those being mined at Ridgeway and Northparkes.

Copper Hill is located in a 5 kilometre long strike trend extending from Little Copper Hill in the north to Vale Head in the south. GCR is currently focused on a PFS on the centrally located higher grade core of Copper Hill. Limited previous drilling at other prospects in the trend suggests potential for further discovery of economic mineralisation outside of the main Copper Hill zone, and options to refine these targets continue to be assessed.

OTHER PROJECTS

A complete list of current projects is included in the Mineral Tenements Table at the end of this report.

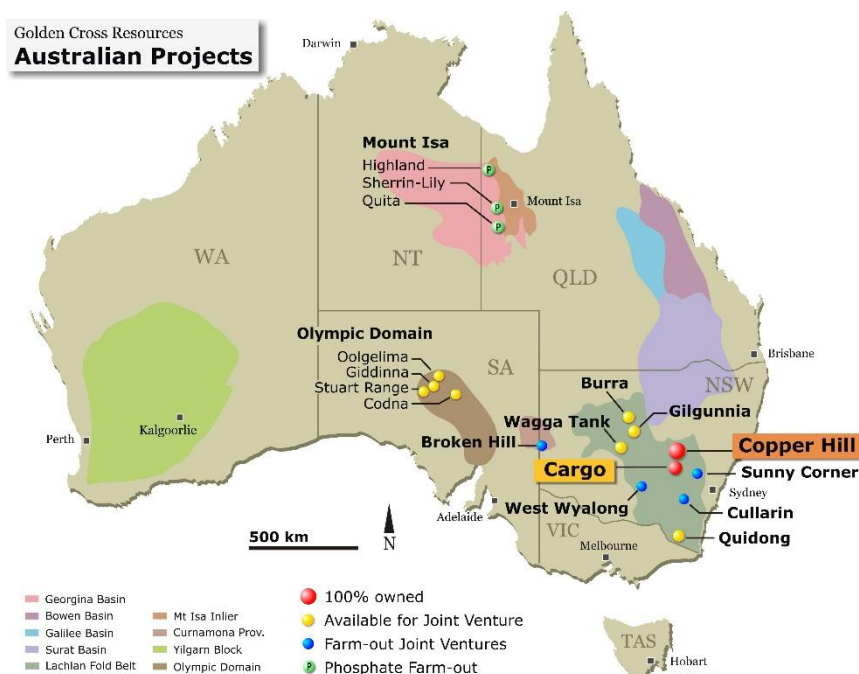

Figure 2: Golden Cross Projects Status Map

GCR has a portfolio of projects diversified by commodity and location in the following geological provinces, with prospectivity demonstrated by regional operating mines and significant deposits:

- Central NSW Porphyry Province Copper/Gold – Copper Hill and Cargo
- South Australian Gawler Craton Iron Oxide Copper Gold (IOCG)
- Cobar Region NSW – Basemetals / Gold
- South-eastern NSW – Zinc / Gold
- Northwest Queensland – Phosphate / Uranium

With the current focus on Copper Hill the remaining projects are being progressed via earn-in joint ventures, with several projects available for farm-in as shown in Figure 1.

Cargo

GCR 100%

The Cargo Project is 12 kilometres west of the Cadia Valley gold-copper mining operations of Newcrest Ltd, in a similar geological setting.

Gold

Resources have previously been reported for the Spur-Dalcoath lode system to JORC 2004 compliance (refer GCR ASX 21 May 2012). Drill targets are being developed to test the potential for further near-surface resources on the remaining 14 identified quartz-sulphide lode systems.

Copper

Previous drilling of the central porphyry in 2008 returned long low-grade copper intercepts to a depth of approximately 300 metres (Figure 3 & 4). Geological consultants and world-recognized porphyry experts Corbett, Menzies and Cunliffe (CMC) have proposed a study of mineralogical associations typical of porphyry systems and integration of all data to produce a 3D geological model that will provide vectors to deeper porphyry copper targets with improved grades. Specifically, during a core re-logging program by Golden Cross, potassic-style actinolite alteration was defined within a new target area, which is an accepted vector towards Ridgeway-style high grade copper-gold pipes.

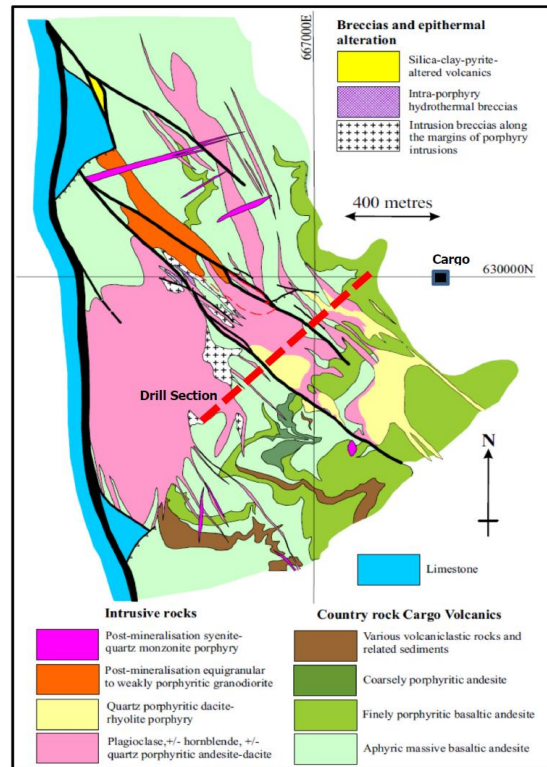

Figure 3: Cargo Geology (after Calibre 2008)

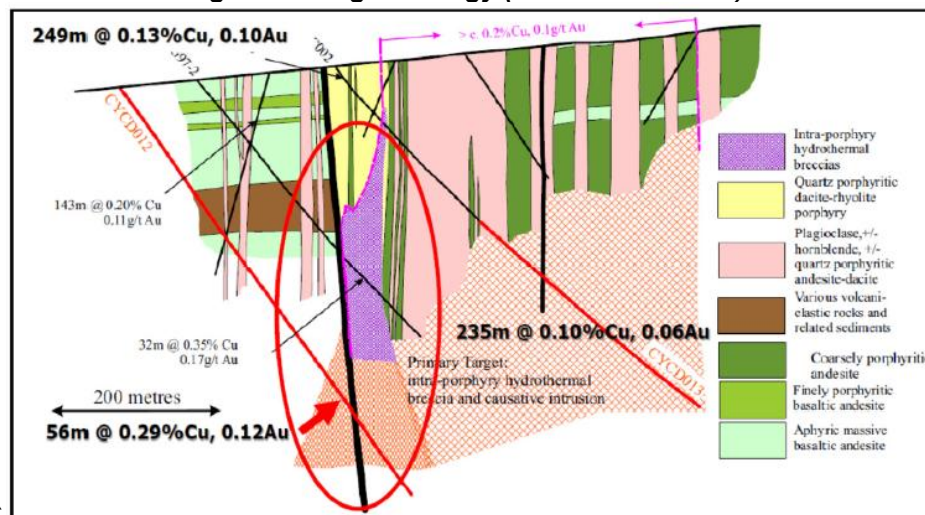

Figure 4: Section CYC12 & 13

This work is planned to commence in the December quarter.

Subsequent to the reporting period the Company approved exploration programs totalling \$35,000 for the Cargo project in the December 2015 quarter. This work includes infill gravity data and detailed re-logging of existing drill core by CMC to enable the establishment of a detailed geological model for the current mineralisation and targeting vectors for future exploration drilling.

South Australia Iron Ore Copper-Gold (IOCG) **GCR 100% - Available for farm-in joint venture**

In South Australia several magnetic / gravity targets have been identified by GCR geophysicists. Three have been prioritised for drilling in 2015 after encouraging results from the 2013 drill program. The targets are located at the north-western end of the interpreted structural corridor that contains significant copper-gold deposits at Carrapateena, Olympic Dam, Prominent Hill and Cairn Hill. Figure 5 & 6.

The South Australian Government has approved a drilling subsidy of up to \$60,000 for drilling of the three holes. Planning and approval processes are underway for the next stage of drilling. In addition to farm-in, consideration is being given to a spin-out of these assets.

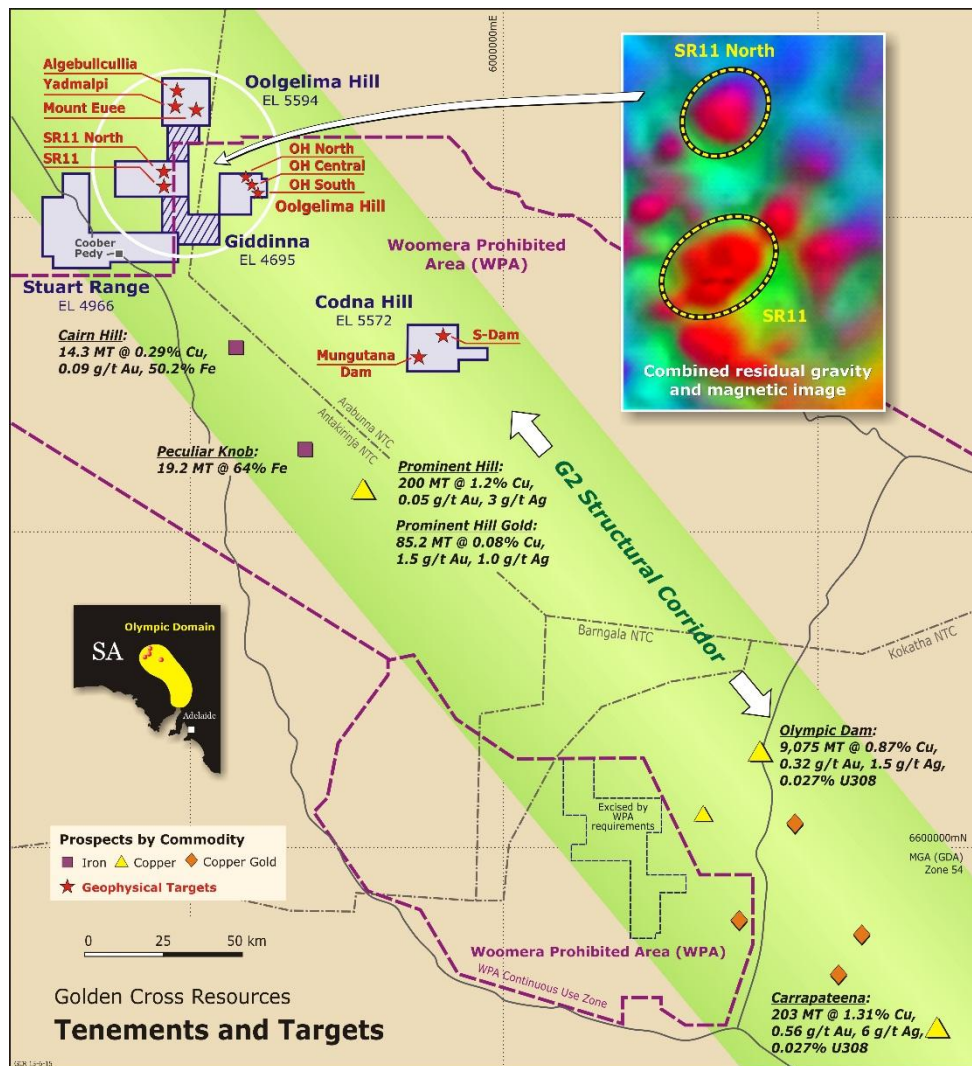

Figure 5: Gawler Craton Project Area Location

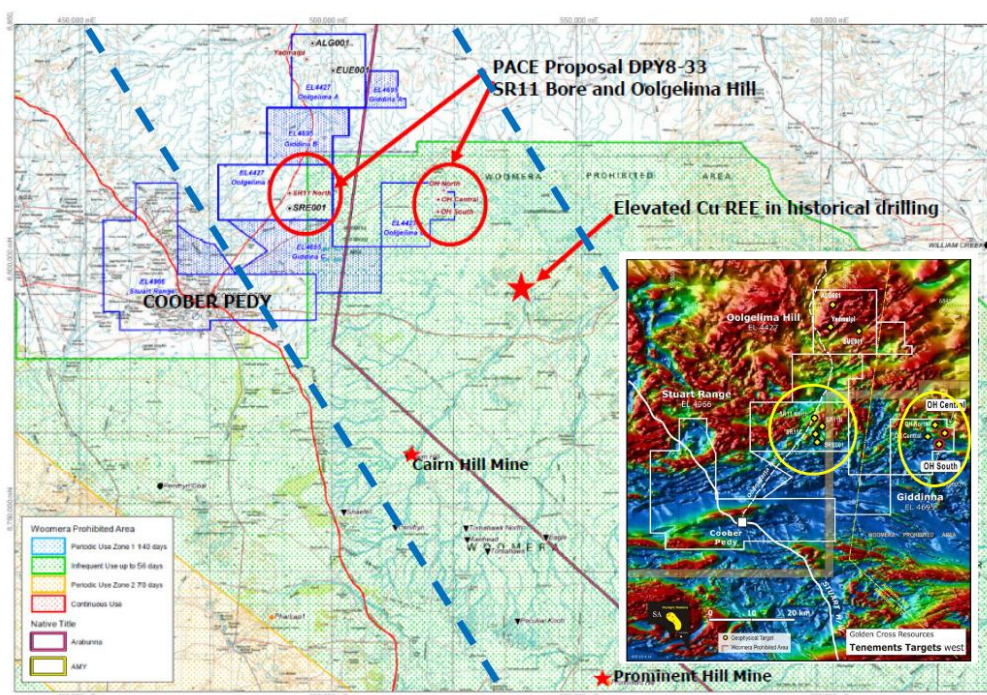

Figure 6: SA Projects, Target Locations, & PACE Proposals
(inset shows targets on magnetic image)

Cobar Region

Canbelego & Gilgunnia Group 100% - available for farm-in joint venture

The Cobar region is well endowed with long life, high grade polymetallic deposits supporting long life mining operations. GCR has three groups of tenements in the region (Figure 7):

- **Canbelego Group** – along strike from Mt Boppy Goldmine

Mt Boppy Gold Royalty

GCR has a 3% royalty on gold produced from the Boppy Goldmine. Black Oak Minerals Ltd (BOK) re-commenced mining at Mt Boppy in September 2015 after previously producing gold in 2002-2005, for which GCR received progressive payments totalling 750 ounces gold. . New production of 65,000 oz. gold is planned over 18 months (BOK ASX 29 September 2015) and the GCR royalty is expected to restart after approximately 20,000 ounces have been produced.

- **Gilgunnia Group** – along strike from Hera Gold-Basemetal Mine and surrounds the Mallee Bull high grade copper discovery
- **Wagga Tank Group**
GCR 20%; MMG Ltd 80%
Wagga Tank is also located in the favourable interpreted Wagga Tank Nymagee structural corridor that encloses other deposits in the region. MMG has received an offer to acquire the project.

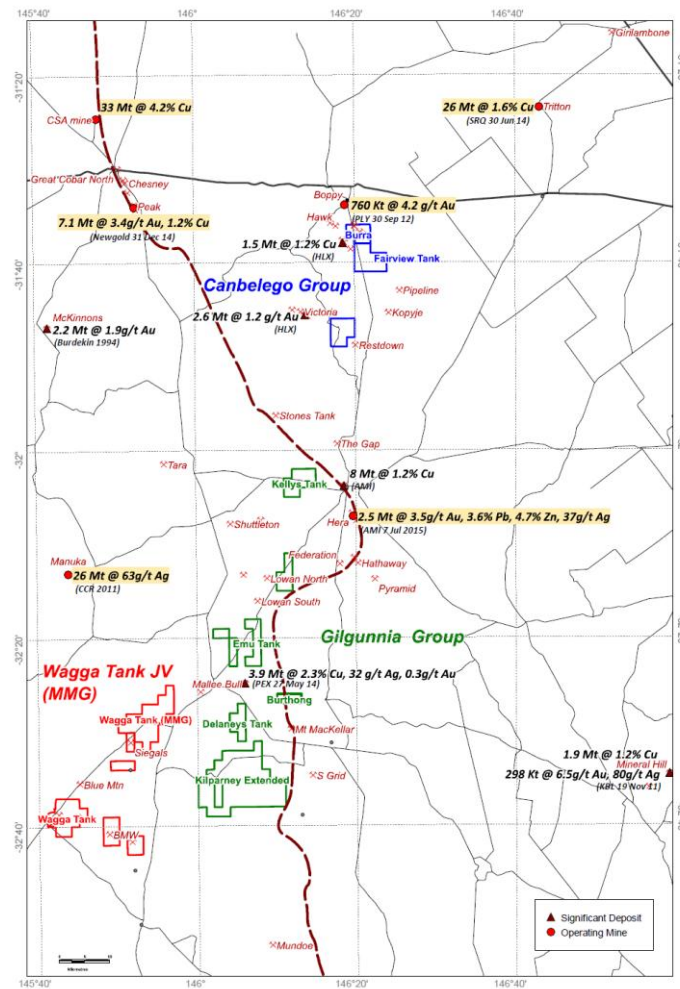

Figure 7: Cobar Region Deposits showing Golden Cross Tenements

Southeast Lachlan

Silurian formations prospective for volcanic hosted massive sulphide deposits (VHMS) extend over 300km from Lewis Ponds in the north through Woodlawn and Captains Flat and into eastern Victoria. GCR has two projects in this region:-

Quidong

GCR 100% - available for farm-in joint venture

Quidong has extensive occurrences of carbonate-hosted zinc/lead, gold mineralisation. Previous data and GCR field reconnaissance have identified high grade zinc-lead-gold drill targets which remain to be tested.

Cullarin

GCR 21.1% JV with Heron Resources Ltd .

No activity reported by JV partner.

Joint Ventures

Broken Hill

JV1: Base metals & Precious metals: GCR 100% Silver City earning 51%

JV2: Ultramafic Hosted Platinum and Nickel: GCR 13%, Impact Minerals (Impact) 87%

During the June Quarter Impact commenced a drill program of 6 holes at the Red Hill Prospect area. GCR received an offer from Impact to purchase EL7390 to reduce the ownership complexities associated with two joint ventures stratified by commodity which was accepted.

West Wyalong

Argent Minerals Ltd 51%, GCR 49%

Argent Minerals Ltd completed a detailed IP survey over the Narragudgil area within EL8001 (ARD ASX 15 Sep 2015). Extensions to the IP are being considered ahead of possible drilling of the main copper-gold porphyry target.

Other

No activity was advised by joint venture partners at Cullarin (Southeast Lachlan), Wagga Tank (Cobar Region), or at Queensland Phosphate (Isa Region).

Notes

- (1) E/EL/ELA = Exploration Permit/Licence/Application; EPM = Exploration Permit for Metals
- (2) Full names for abbreviations are as follows:

ARD	Argent Minerals Limited (ASX: ARD)	MTI	MapIntec Technologies Inc.
GCO	Golden Cross Operations Pty Ltd, a wholly owned subsidiary of GCR	PPO	Paradise Phosphate Limited, a subsidiary of
GCRP	GCR Panama, Inc, a wholly owned subsidiary of GCR		Legend International Holdings (OTC: LGDI)
IPT	Impact Minerals Limited (ASX: IPT),	SCI	Silver City Minerals Limited (ASX: SCI)
KER	King Eagle Resources Pty Limited, a wholly owned subsidiary of GCR	TRO	TriAusMin Minerals Limited, a wholly-owned subsidiary of
MMG	Minerals and Metals Group Australia, a wholly owned subsidiary of		Heron Resources Limited (ASX: HRR)
	MMG Limited (listed on the Hong Kong Stock Exchange)		
- (3) Silver City Minerals Ltd can earn a 51% interest in gold, silver and base metals, (but excluding nickel and platinum group metals) by spending \$600,000 by 8 October 2016. To earn 80%, SCI must spend another \$500,000 on exploration and development activities in the subsequent two years to 8 October 2017. Impact Minerals Ltd earned 80% interest in nickel and platinum group metals. Further expenditure by IPT increased its interest to 87% and diluted GCR interest to 13%.
- (4) Minerals and Metals Group Australia spent \$550,000 by 6 February 2011 to earn 80% interest in the Wagga Tank Joint Venture over EL 6695 and EL 7226. GCO declined an offer to resume management.
- (5) TriAusMin earned an initial 62.5% interest by spending \$200,000 to 13 September 2010. Further expenditure by TRO of \$170,000 to July 2014 increased TRO's interest to 78.9% and diluted GCO's interest to 21.1%.
- (6) Argent Minerals earned 51% in the Sunny Corner Joint Venture by spending \$500,000 by 1 June 2011 in Stage 1. It earned 70% by additional expenditure of \$186,000 (for a total expenditure of \$686,000) by July 2013.
- (7) Argent Minerals earned 51% in the West Wyalong Joint Venture by spending \$750,000 by 1 June 2011. ARD may earn a further 19% to total 70% by additional expenditure of \$550,000 (for a total expenditure of \$1,300,000) by January 2016. Royal Gold Inc. holds a 2.5% net smelter return.
- (8) Paradise Phosphate Limited (as assignee from Legend International Holdings Inc.) earned its 80% interest (in phosphate minerals only) by spending \$3,000,000 by 7 December 2012, leaving KER with 20% interest. GCR has 100% rights to all other minerals and is free carried to a decision to mine for phosphate.
- (9) MapIntec Technologies Inc., a Panamanian company, has a 10% interest free carried to a decision to mine.

*The **Production Target and the Mineral Resources** on which it is based are extracted from reports released to the market by GCR on 24 March 2015 and 15 April 2015. The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements and that all material assumptions and technical parameters underpinning the production target in the report dated 15 April 2015 continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.*

Forward-Looking Statements: *This document may include forward-looking statements. Forward-looking statements include, but are not limited to, statements concerning planned exploration program and other statements that are not historical facts. When used in this document, the words such as "could," "plan," "estimate," "expect," "intend," "may," "potential," "should," and similar expressions are forward-looking statements. Although Golden Cross Resources Limited believes that its expectations reflected in these forward-looking statements are reasonable, such statements involve risks and uncertainties and no assurance can be given that actual results will be consistent with these forward-looking statements.*

Compliance Statement: *The information in this report that relates to Exploration Results is based on information compiled by Mr. Kenneth Hellsten, who is a Fellow of the Australian Institute of Mining and Metallurgy (AusIMM). Mr. Hellsten is an employee of Golden Cross Resources Limited, and has sufficient experience relevant to the style of mineralisation and type of deposit under consideration and to the activity he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr. Hellsten consents to the inclusion in the report of the matters based on this information in the form and context in which it appears.*

About Golden Cross Resources Ltd

Golden Cross Resources (ASX:GCR) is a mineral explorer with a copper-gold focus. Development focus is the Copper Hill Copper-Gold Project. GCR has many high quality projects across Australia as well as prospective joint ventures funded and managed by GCR's partners. At 30 June 2015, GCR held \$0.438 million in cash

- 1 This statement has been prepared under accounting policies which comply with accounting standards as defined in the Corporations Act or other standards acceptable to ASX (see note 4).
- 2 This statement gives a true and fair view of the matters disclosed.

Name: Carl Hoyer, Company Secretary Date: 29 October 2015

Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements and petroleum tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement or petroleum tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 1022: Accounting for Extractive Industries* and *AASB 1026: Statement of Cash Flows* apply to this report.
- 5 **Accounting Standards** ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
