

## ASX RELEASE

21 December 2015

### UraniumSA Limited ("UraniumSA")

ASX Code: USA

ABN 48 119 978 013  
Ground Floor  
28 Greenhill Road  
WAYVILLE SA 5034  
Phone +61 8 8132 0577  
Fax +61 8 8132 0766  
[www.uraniumsa.com.au](http://www.uraniumsa.com.au)  
[executive@uraniumsa.com.au](mailto:executive@uraniumsa.com.au)

### BOARD OF DIRECTORS

**Alice McCleary** Chairman  
**Martin Janes** Director  
**Russel Bluck** Director &  
Geoscience Manager  
**David Paterson** Director &  
Acting CEO

### PROJECTS

#### South Australia

Samphire ELs 4979, 5426 (JV)  
Murninnie EL 5440  
Wild Horse Plains EL 4693  
Muckanippie EL 4694

### ISSUED CAPITAL

21 December 2015  
Shares on Issue: 185,171,038  
Quoted shares: 185,171,038  
Unlisted Options: 14,650,000

### INVESTOR INQUIRIES

## \$300,000 FUNDING FACILITY

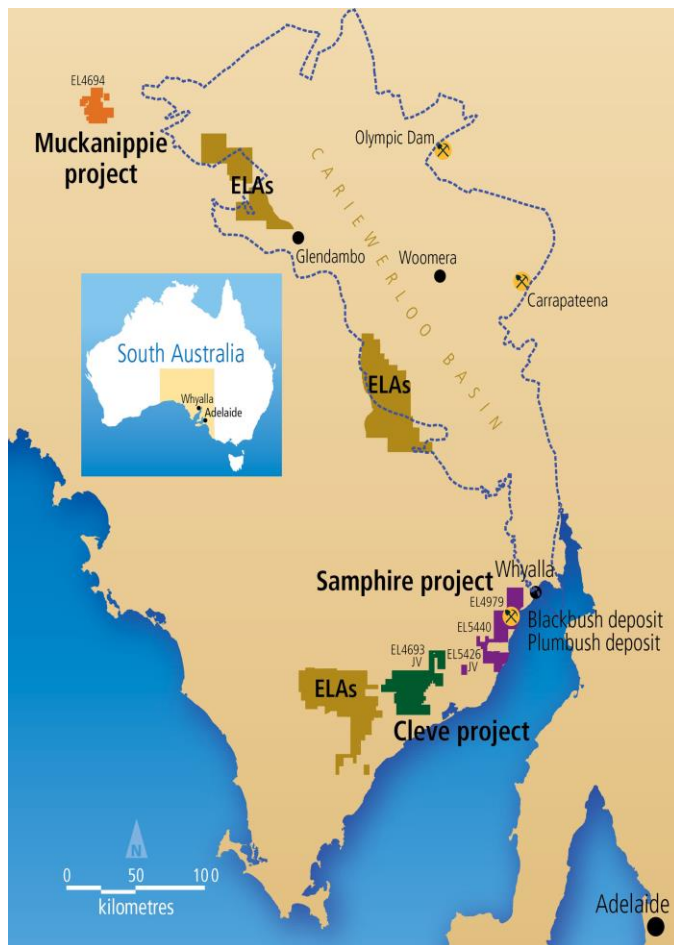

### Drawdown \$100,000

UraniumSA advises that it has today received \$100,000, a drawdown under the \$300,000 secured convertible debt facility ("Facility") announced to the ASX on 30 April 2015.

Facility conditions are as detailed in the 30 April 2015 ASX release. \$100,000 remains undrawn.

21 December 2015

## About UraniumSA Limited

UraniumSA is an Adelaide based explorer specialising in uranium mineralisation within a substantial portfolio of properties in South Australia's Gawler Craton.

The Company has discovered sediment hosted uranium mineralisation within Exploration Licence 4979, Samphire, which is located 20km south of the industrial city of Whyalla on the eastern Eyre Peninsula in South Australia. The exploration Licence is owned and operated by Samphire Uranium Pty Ltd, a wholly owned subsidiary of UraniumSA Limited.

The Samphire project contains the:

**Blackbush deposit** with an estimated inferred resource 64.5 million tonnes of mineralisation at a bulk grade of 230ppm containing 14,850 tonnes  $U_3O_8$  at a 100ppm  $eU_3O_8$  cut-off grade (JORC 2012).

**Plumbush deposit** with an estimated inferred resource 21.8 million tonnes of mineralisation at a bulk grade of 292ppm containing 6,300 tonnes  $U_3O_8$  at a 100ppm  $eU_3O_8$  cut-off grade (JORC 2004).

The estimated mineralisation is predominantly sediment hosted in Eocene age Kanaka Beds. Exploration has discovered uranium mineralisation in other geological settings and exploration is continuing.

An evaluation of mining methods to optimise the recovery of uranium from the identified resources of mineralisation is in progress. Application has been made for a Retention Lease for an in-situ recovery field trial at the Blackbush deposit. Consideration of open cut options for the sediment-hosted and granite basement hosted uranium mineralisation is underway.

Through its own tenure and by joint venture UraniumSA has exploration control over what it considers the most prospective portions of the Pirie Basin. The Board has continued its diversification of UraniumSA's exploration efforts into commodities and opportunities other than uranium. Work on the Blackbush deposit within the Samphire project will continue at a rate which reflects the current global uranium market, production opportunities and investor sentiment.

David Paterson  
Acting Chief Executive Officer  
UraniumSA Limited

*The exploration results mineral resources reported herein, insofar as they relate to mineralisation, are based on information compiled by Mr Russel Bluck a Director of UraniumSA Limited and Member of the Australian Institute of Geoscientists with sufficient experience relevant to the style of mineralisation and type of deposits being considered, and to the activity which is reported to qualify as a Competent Person as defined by the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (the JORC Code, 2012 Edition). Mr Bluck consents to the inclusion in the report of matters based on his information in the form and context in which it appears. It should be noted that the abovementioned exploration results are preliminary.*
