

OZIRIS PRODUCT LAUNCH

Beston Global Food Company Ltd ('BFC' or the 'Company') advises that its patent pending OZIRIS first release mobile App has been uploaded to IOS App Store and is expected therefore, to be available in the App Store within the next few weeks.

The Android version of the OZIRIS App has also been completed and will be launched at the same time as the IOS version is released.

As previously advised by the Company, OZIRIS comprises a customized track and trace technology platform which enables consumers to verify the source, quality and integrity of food and beverage products. OZIRIS has been wholly developed by BFC and builds on verification and anti-counterfeiting technology and applications built by DataDot Technology Limited and Brandlok Brand Protection Solutions Pty Ltd.

OZIRIS has been awarded four provisional patents for its technology developments which are held by Beston Technologies Pty Ltd, a 100% owned subsidiary of BFC.

The OZIRIS first release will provide users with a number of capabilities, including the ability to:

- Login via email or Facebook
- View all BFC Products
- Trace all BFC products back to their source, as well as find out where they were made, the use-by date, production date, nutritional information, and other comprehensive manufacturer details
- Receive push notifications on product updates
- Share product information on social media and keep track of their scanned product inventory.
- Purchase products through the App

The App will be available in both English and Chinese with more languages to follow.

The Chairman of BFC, Dr Roger Sexton said that OZIRIS had been developed to provide a comprehensive and compelling solution to the fears of consumers regarding food source and integrity, and will allow them to verify the produce they are looking to purchase as safe to eat or drink.

The track and trace technology in OZIRIS has been combined with the anti-counterfeiting hardware of Brandlok Brand Protection Solutions to provide consumers with verification of food safety, authenticity and peace of mind, all in one process.

The combination of the two technologies enables end-to-end traceability with supply chain authentication

Dr Sexton said that OZIRIS is being linked to the Company's soon-to-be-released online food and beverage market place.
