

## QUARTERLY ACTIVITIES REPORT FOR THE PERIOD ENDING 30 SEPTEMBER 2016

### Highlights:

- Large 55,000m exploration program commenced at Zuleika and Mt Stirling
- Initial results from Mt Stirling are very encouraging and include:
  - 2m @ 27.21g/t Au from 55m including 1m @ 45.50 g/t Au
  - 1m @ 8.50g/t Au from 50m
  - 1m @ 8.00g/t Au from 59m
  - 7m @ 10.80 g/t Au from 46m including 1m @ 69.00g/t Au
- Drilling is continuing at Targets 18 and 19 at Zuleika
- Best intersection to date is 12m @ 2.44g/t Au from 36m
- Metallurgical test work at Mt Stirling shows free milling ore with high recoveries

Torian Resources Ltd (**Torian** or **Company**) (**ASX:TNR**) is pleased to announce its activities report for what has been another busy quarter for the Company. During the period, Torian announced its planned FY2017 exploration program which is focused on its Zuleika JV and Mt Stirling projects. The program consists of approximately 55,000m of RAB and RC drilling targeting several high priority targets at the two projects.

Since the acquisition of its interests in the Zuleika JV, Torian has asserted itself as one of the most active explorers in the region. With 36,500m drilled in FY2016, Torian's planned 55,000m FY2017 program seeks to continue this active exploration strategy.

During the quarter the Company commenced this exploration program and has released a number of encouraging drill results from the two projects. A summary of these results is provided below.

## Zuleika Joint Venture

- 90 RAB holes completed;
- 4,669 metres drilled;
- Best intersection to date includes 12m @ 2.44g/t Au from 36m; and
- Drilling is continuing at Targets 18 and 19

Phase 1 RAB drilling across Targets 18 and 19 commenced during the quarter, with 90 holes for 4,669m drilled. Results received to date were reported in an announcement to the ASX on 27 September 2016, with the remainder of assay results yet to be received from the laboratory. It is anticipated the Phase 1 drilling programme at targets 18 and 19 will be completed during the December quarter.

The results received to date are very encouraging and the interpretation of these results indicates that they warrant follow up phase two RAB drilling to test continuity between the mineralised zones defined by phase one.

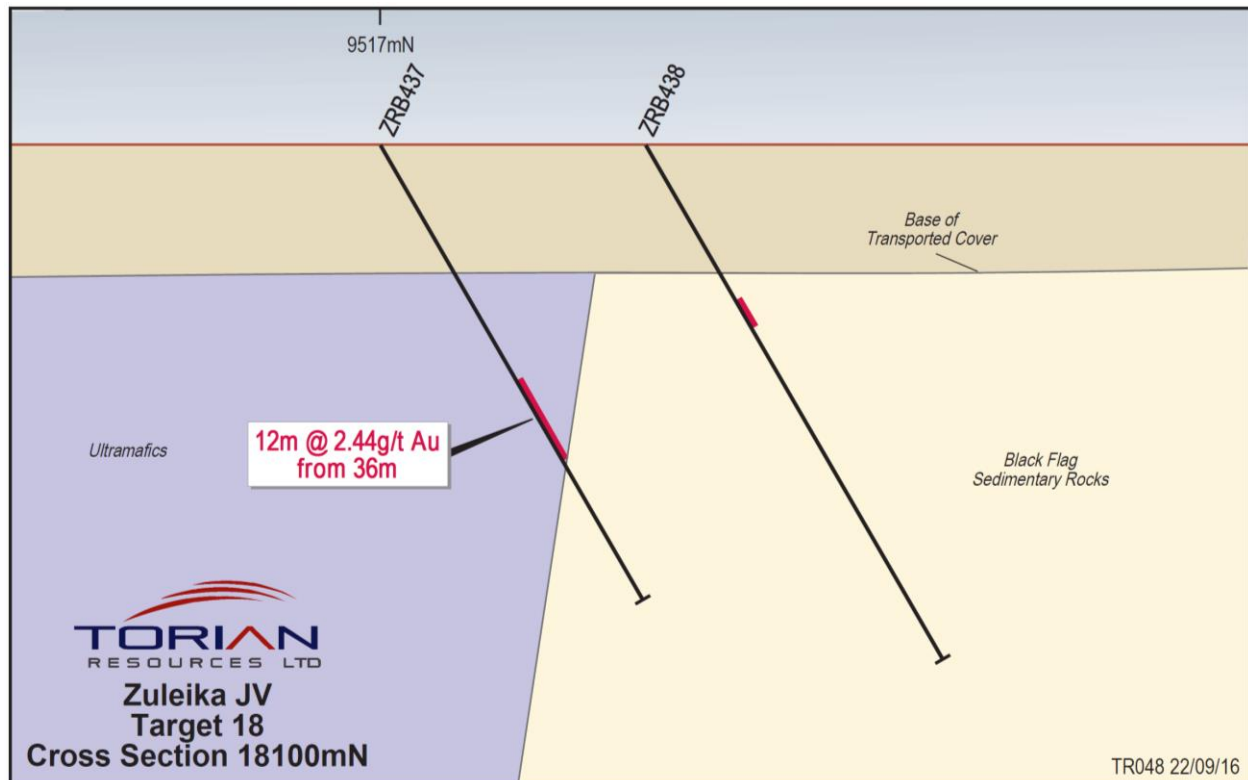

Figure 1: Cross section at target 18 at Torian's Zuleika project.

2,200 m of RC drilling is planned to be completed during the December quarter at Targets 16 and 17.

## Mt Stirling Project

- 91 Reverse Circulation holes drilled;
- Successful completion of a two-phase 4,975m programme;
- Continuity of the mineralised vein at Mt Stirling Well and Mt Stirling identified; and
- RAB drilling to test for northern extensions to mineralisation planned to be completed next quarter.

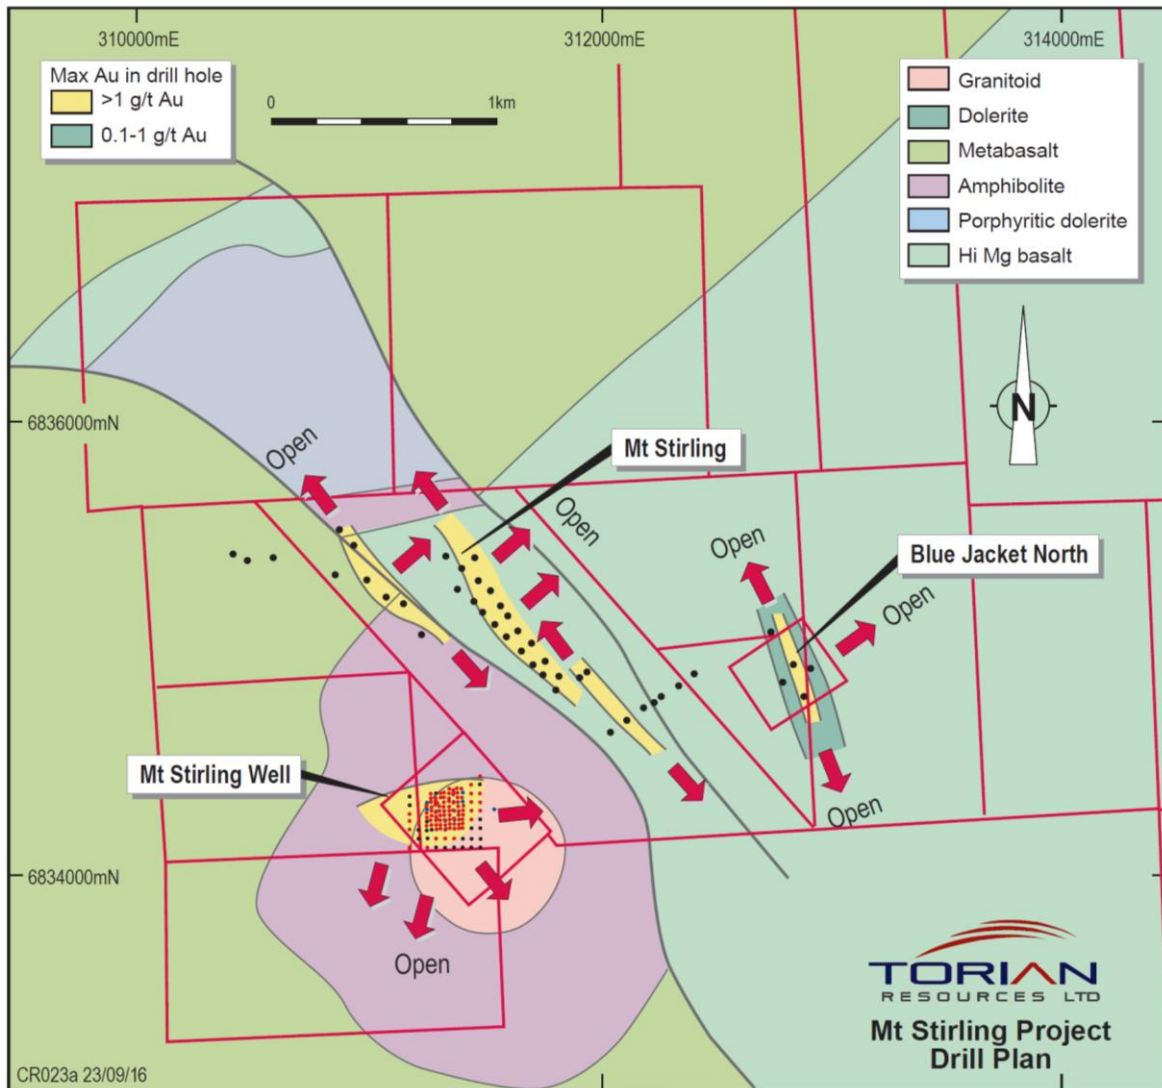

Figure 2: Mt Stirling Project Geology with Historical Drilling and Prospect Locations.

During the quarter, a two-phase RC drilling programme infilling and extending previous drilling at the Mt Stirling Project was completed. A total of 91 holes were completed for 4,975m with geological supervision determining hole depths. Drilling has better defined the location and characteristics of the quartz vein known to host mineralisation at Mt Stirling Well. This vein remains open along strike and down dip.

As announced to the ASX on 12 October 2016, RC drilling into the mafic shear zone at Mt Stirling was successful in confirming historic drill results, with follow up drilling required to further define the mineralisation along strike and down dip. Results received during the quarter include:

- 4m @ 12.98g/t Au from 17m (including 1m @ 22.60 g/t Au from 19m); and
- 8m @ 3.07g/t Au from 21m.

A typical cross section at Mt Stirling is shown in Figure 3 below.

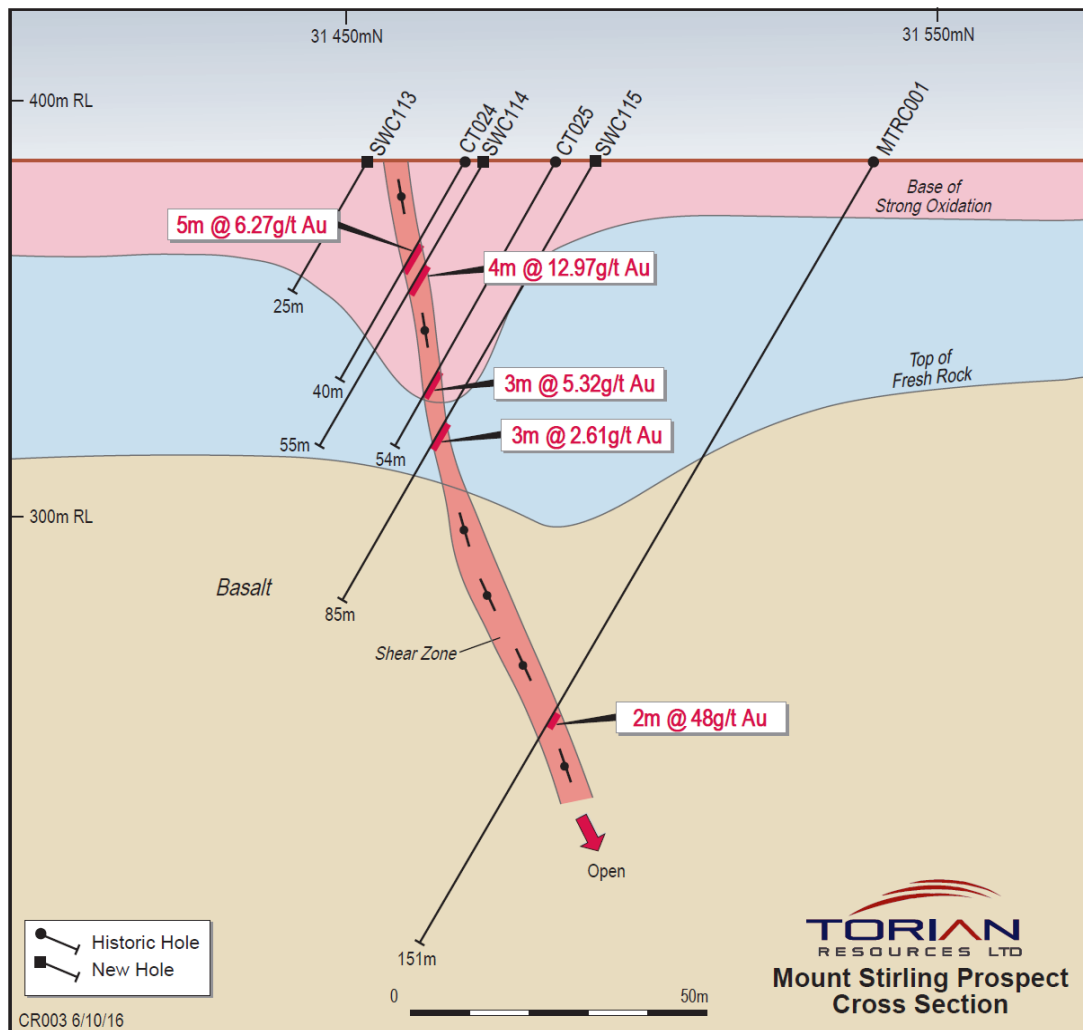

Figure 3: Cross section showing historical and new drill results at Mt Stirling.

Planning for the next stage of exploration is in progress.

### Other Projects

Data compilation and validation work continues on other projects with a focus on those additional projects to be acquired as part of the proposed Cascade takeover. Targets are continually being identified

not only in the Leonora and Zuleika Project areas, but also the Malcolm, Mt Keith, Kanowna South, Mt Monger and Bardoc areas, with exploration planning in progress.

The Company continues to monitor tenements and reviews new projects and tenements offered by third parties. The priority is tenements that can add to existing project areas or alternatively standalone new projects that have a reasonable potential for gold discoveries.

For further information, please contact Matthew Sullivan (Torian's MD) on (08) 6216 0424.

Yours sincerely,

#### **About Torian:**

*Torian Resources Ltd (ASX:TNR) is a highly active Australian gold company that is focused on developing the gold mines of tomorrow. The Company has four advanced projects located in the Goldfields region of Western Australia.*

*Torian's flagship Project, the Zuleika JV, lies north and partly along strike of several major gold mines including Northern Star (ASX:NST), Tribune Resources (ASX:TBR) and Rand Mining's (ASX:RND) 7Moz East Kundana Joint Venture and Evolution's (ASX:EVN) Frogs Legs and White Foil operations.*

*Since May 2015, Torian has increased its landholding at the Zuleika Project by approximately 75% via eight separate acquisitions. Torian is now the second largest landholder in this highly sought after region and is focused on fast tracking its development.*

*Torian has commenced a large, 4 Phase, exploration program that is targeting the Zuleika Shear and intends to further consolidate ground in this region.*

*Torian is also developing the high grade Mt Stirling Project which has an outcropping inferred resource located 40km North West of Leonora. Following a successful infill drilling program in December, Torian is currently completing an internal economic study on the project to assess it as a standalone mining operation.*

*Torian's exploration team has an enviable track record of discovering and developing a number of multi-million ounce gold mines in this region. Torian is commencing an exciting phase in its development and we look forward to updating the market as things progress.*

*Information in this report pertaining to mineral resources and exploration results was compiled by Mr Matthew P. Sullivan, who is a member of Aus.I.M.M. Mr Sullivan is the principal of Jemda Pty Ltd, geological consultants to the company. Mr Sullivan has sufficient experience which is relevant to the style of mineralisation and the type of deposit that is under consideration and to the activity that he is undertaking to qualify as a competent person as defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr Sullivan consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.*
