**ASX Announcement**

**DRILLING COMMENCES AT ZAPHOD AND JULIUS PROSPECTS**

Echo Resources Limited (the "Company"; ASX:EAR) is pleased to advise that drilling has commenced at the Company's Zaphod and Julius Prospects in the Yandal Gold Belt of WA.

The programs involve Air Core drilling to test near surface (0-50 metres) zones of gold mineralisation at the two prospects.

As at 3 April 2016, some 13 holes for 695 metres had been completed at Zaphod covering 110 metres of strike over the outcropping quartz zone which provided very high gold assays in outcrop and trench sampling recently (see EAR ASX Release dated 23 February 2016).

The rig was moved to Julius on 3 April 2016 and completed three holes by close of drilling on that day. Samples from the Zaphod program have been dispatched to the laboratory. Results are expected to be available in 2 to 3 weeks.

Drilling proposed for Julius will comprise approximately 80 vertical holes for 3,500 metres to better define the resource and mining parameters of the known shallow supergene gold mineralisation. The Julius program is expected to take approximately two weeks to complete.

Results will be released as they come to hand.
