

#### Memphasis Limited ABN 33 120 047 556

Financial Year Ended 30 June 2016 Appendix 4E: Performance Commentary

It has been a bitter sweet year for Memphasys. Most legacy issues have been dealt with and there have been many achievements. However, the ongoing difficulty with PrIME Biologics Pte Ltd ("PrIME"), the company that Memphasys spun out in June 2014, and the ensuing litigation against PrIME and its major investor, Palau Manukan Ventures Labuan Ltd ("Manukan") has put a dampener on the overall result and has placed an extra requirement on Memphasys for ongoing litigation funding.

On the positive side, Memphasys has had a number of achievements over the year.

- Results of an in-vitro clinical evaluation by Monash IVF of the performance of a SpermSep research grade device were positive. This study showed that the research grade device worked well and that there is a market need for a clinical grade device;
- The long running and expensive employment contract dispute with the former Managing Director, Mr. Prakash Patel was resolved;
- A legal Collaborative Agreement with the University of Newcastle was executed and the association with the University and with Professor John Aitken was further strengthened;
- Melbourne University's Chemical and Biomolecular Engineering Department assisted with the development of an entirely new membrane for the SpermSep device. A consulting agreement was executed to develop new membranes and separation technologies for other high value applications beyond the initial new membranes for SpermSep;
- The company continued to refine and develop its strategy for SpermSep. The SpermSep clinical prototype, which the Company is now developing and which is to be evaluated by global key clinical IVF opinion leaders, has a new, cost efficient, biocompatible membrane and a completely re-engineered, simplified and improved design appropriate for clinical use;
- The precast gels business was sold. The sale entails making a quantity of gels for the buyer, transferring intangible assets, packing the plant for relocation to China and subsequently commissioning the plant.

We were delighted to hear that Professor John Aitken won a prestigious, global award on 31 March 2016 in the area of Reproductive Biology. Professor Aitken was only the second researcher outside the USA to ever receive this award.

Another of our earlier collaborators, Emeritus Prof David Solomon, from the University of Melbourne's Chemical and Biomolecular Engineering Department, was also honoured. He received a Companion of the Order of Australia (AC) in the Queen's Birthday honours for his contribution to the field of polymer chemistry and plastics.

With respect to PrIME, the Company is in litigation in the Singapore High Court against PrIME and its key investor, Manukan, which is part of Malaysian Sovereign Fund, Xeraya.

PrIME was spun out of Memphasys in June 2014 for the purpose of using the technology developed by Memphasys in the field of plasma fractionation. PrIME has had substantial external investment since June 2014, principally from Manukan. The investors received Series A preference shares which have voting control. Memphasys is a passive investor and currently holds 95,912 B class shares in PrIME.

In order to obtain the B class shares, Memphasys agreed to take over a third party debt to A-Bio Pharma Pte Ltd ("A-Bio") on the GMP production facility in Singapore that PrIME is using.

Memphasys has not paid the third party debt which was due to be paid to A-Bio at the end of March 2016. Initially A-Bio sought payment from Memphasys but has subsequently sought payment from PrIME. The debt payment is guaranteed by PrIME and the Memphasys' B shares in PrIME are held as security for the payment. There are complex agreements around the debt repayment and this is one area in which Memphasys is in litigation against PrIME and Manukan.

Memphasys has a separate litigation against PrIME in respect of the GF100 machine, a key part of the cGMP accreditation process for PrIME. PrIME is now claiming to own this machine.

#### **Business Activities**

Memphasys' main focus is separating high value biological substances from fluids, utilising its proprietary separation membranes and equipment.

Its lead program, SpermSep, efficiently separates the best quality sperm from a semen sample using electrophoresis and specialist membranes, in preparation for IVF. This same principle can also be applied to assisted animal reproduction.

Memphasys is collaborating with the University of Newcastle in both human and animal reproduction. The University's main focus in the animal reproduction field with Memphasys is equine reproduction.

Memphasys is also maintaining its collaboration with Minitube GmbH ("Minitube"), the largest global provider of animal Artificial Reproductive Technologies (ART) products. The main research program with Minitube is the preparation of frozen bovine semen, a technically challenging project, to process in the SpermSep device. Whilst this program is technically difficult it has provided remarkable insights about how the SpermSep device could be re-engineered for the human IVF market. Memphasys is now applying these findings in re-engineering an animal ART device.

Memphasys also has a consultancy arrangement with the University of Melbourne Chemical and Biomolecular Engineering Department and is working on the development of new membranes and other separation systems for additional high value biological separations beyond SpemSep.

#### Financial Performance

The Company undertook a number of capital raisings: An SPP in August 2015, a placement in January 2016 and an underwritten rights issue in February 2016 which also provided for the conversion of director loans into equity.

In the Non-Renounceable Entitlement Offer announced to the market in February 2016 the Directors converted \$1.53 million debt into equity, thereby strengthening the Company's Statement of Financial Position.

The pre-cast polyacrylamide gel business was sold on 1 April 2016 for US\$130,000. This transaction included the transfer of ownership of the US subsidiary, NuSep Inc., to the buyer. The contribution to losses from the gels business in general, and NuSep Inc in particular (which is included within the gels business) were as follows for the financial year ended June 2016 and the previous period:

|                                      | Year ended 30 June 2016<br>\$ | Year ended 30 June 2015<br>\$ |
|--------------------------------------|-------------------------------|-------------------------------|
| Pre-cast polyacrylamide gel business | (133,178)                     | (375,338)                     |
| NuSep Inc (included in gel business) | (97,391)                      | (307,725)                     |

Due to low sales volume, the Company also decided to discontinue the diagnostics business in June 2016. The contribution to profits from this business in the financial year ended June 2016 and the previous period were as follows:

|                     | Year ended 30 June 2016 | Year ended 30 June 2015<br>\$ |
|---------------------|-------------------------|-------------------------------|
| Diagnostic business | 2,375                   | 89,673                        |

The Company had two remaining sources of revenue, as follows:

- A tax refund on R&D activities. An application for \$497,355 was lodged with AusIndustry on 5 August 2016 and was subsequently approved.
- Rental income from the GF100 machine from PrIME. Whilst the rental amount was \$63,960 in the 2016 financial year, it was not received apart from an isolated, unspecified payment of \$6,829.46 in January 2016. For the 2015 financial year, PrIME paid \$80,080 as rental payments on the machine, which covered rental for the months of May 2014 to June 2015.

Memphasys continued investing in high value adding projects which will not be revenue generating for at least two years. The main project, SpermSep, received the largest investment totaling \$722,251. This investment is expected to increase in future years.

Apart from investing in the development of new membranes for the SpermSep project, at an overall cost of \$206,422, Memphasys also invested in researching other new membranes and new methods for high value biological separations, at a cost of \$176,562. Internal development costs were the largest component of these overall costs but there were some payments also to the University of Melbourne. As the latest project is still in the research stage, its costs have been booked as expenses and will not be capitalised as intangible assets until the project enters the development stage.

Memphasys incurred a \$2,378,721 loss from continuing operations (2015: loss of \$2,360,019). General and Administrative expenses of \$1,863,341 (2015: \$1,509,329) was the largest expense category. This amount includes legal fees for \$413,000 related to the legal case with the former Managing Director Mr. Prakash Patel which was settled in November 2015, the legal case with PrIME over the ownership of the GF100 machine and various legal agreements on the potential sale of the class B shares in PrIME which has not eventuated at this stage. When Memphasys finalises its association with PrIME spending on legal fees will be substantially decreased.

Other one-off expenses incurred in the financial year ended June 2016 by Memphasys are the options granted to Alison Coutts in the November 2015 AGM for \$204,000 (this is an accounting expense as the options have a strike price of 5.7 cents and are

well "out of the money") and fees for board representation by Alison Coutts and Andrew Goodall on the PrIME board amounting to \$30,753. Both Alison Coutts and Andrew Goodall resigned from the PrIME board during the year and Memphasys no longer has a representative on that board. Consulting services with Transocean Securities Pty Ltd and Robert Gilmour amounted to \$158,000.

#### Other contributors to the loss were:

- Interest charges on finance costs of \$326,015 (2015: \$682,304). The significant reduction from the financial year 2015 was due to both conversions of debt to equity by the Directors post the AGM 19 December 2014 and in the Non-Renounceable Entitlement Offer announced to the market in February 2016. Also, 83% of the interest charges in the financial year 2016 (\$269,000) were due to the accrual of interest payments on the third party debt to A-Bio.
- Foreign exchange losses of \$156,425 (2015: \$518,515). 93% of these charges (\$145,000) were due to the devaluation of the Australian dollar having an impact on the third party A-Bio debt.

During the year, the Board put into action its earlier decision to focus on value adding R&D activities and streamline operations. It decided to sell the gels business which had insufficient global scale and to cease the diagnostics business, which had become too small to maintain. The FY2016 financial performance does not yet reflect the reduction in operating expenditure from streamlining operations as the large legal expenses have increased overall corporate expenditures.

The largest current liability, shown as \$4.8 million, is the third party debt to A-Bio. A-Bio developed the Singapore cGMP facility, converting a large floor space of an office building to cGMP manufacturing capability. PrIME took over the space with cGMP fit out after A-Bio decided to vacate. Memphasys' agreement to take responsibility for payment of this debt was part of the agreement for spinning out PrIME. Through that spin out process, Memphasys obtained B class non-voting shares in PrIME.

The value of the B class shares held in PrIME has been maintained at the same cost value as the prior year. Given that the range of reasonable fair value estimates on these shares is significant and the probabilities of the various estimates cannot be reasonably assessed at this stage, Memphasys is precluded from measuring the investment at fair value.

Memphasys is currently seeking to sell its investment in PrIME. This was announced in April and May 2015 and is still the case. Negotiations are continuing, despite the litigation, but have not concluded.

#### **Board and Management**

During the financial year Memphasys appointed Dr Robert Gilmour to the Board as a non-executive director. Dr Gilmour is also a consultant to the Company. Michael Graham resigned in January 2016 and Mark Gell resigned in April 2016 as non-executive directors. The Board was grateful for their respective contributions as announced to the market at the time of their resignations.

#### 2017 Outlook

The development of the next generation SpermSep device and new membranes are expected to be value drivers for the company in the foreseeable future, subject to sufficient funding being available and subject to conclusion of the litigation against PrIME and Manukan.

Whilst the directors are hopeful of negotiating a successful resolution of this dispute, no agreement has been reached at this stage.
