

SpeedCast wins new contract in the Middle East from major oilfield service provider

SpeedCast expands oilfield service provider network connections to multiple sites in UAE and Oman

Dubai, UAE, 19th May 2016 - [SpeedCast International Limited](#) (ASX: SDA), a leading global satellite communications and network service provider, today announced that it has been awarded a contract to provide one of the most prestigious global oilfield service companies in the world ("Customer") with a fully managed network service for ten sites in the UAE and Oman, as an expansion to current services in other regions.

Keith Johnson, Senior Vice President & General Manager – Energy, SpeedCast, says, "Managed services create significant value for our customers as SpeedCast delivers an end-to-end service managing and controlling all aspects of the network as well as the complexity of the local licensing and regulatory requirements. That way, we ensure networks are delivered on-time and on-budget, comply with local laws, and meet the most demanding operational standards. With a managed service agreement, we can react quickly to new requirements and provide service to new sites in a seamless manner."

"This win demonstrates our ability to achieve revenue synergies as a result of our recent acquisitions", Pierre Jean Beylier, CEO of SpeedCast, comments. "We have been serving the Customer through different entities in different regions and we are now growing as a more significant global partner for them. Our recent acquisitions position us well to expand our services to regions where we have not had a strong presence historically. The Middle East is a good example of that with our expanded Dubai office and our office in Iraq. Our unique global infrastructure and service network are positioning us well to service energy customers wherever they are."
