Warro-4 Retesting Update

Transerv Energy (ASX: TSV) announces that Warro-4 retesting operations have commenced.

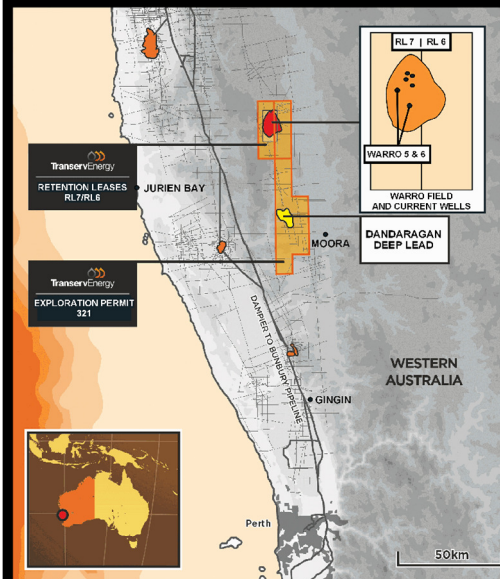

Over the last weekend, equipment was installed on site and the secondary target, "B" sand reservoir section, was allowed to flow. This resulted in a small amount of "blow-down gas" before the well ceased to flow and was shut-in.

The current operation is preparing to flow the main objective, the topmost part of the "C" reservoir section. Depending upon results, a decision will then be taken on whether to run a jet pump in the well to assist the well to flow.

For and on behalf of the Board
