Presentation - Air & Waste Management Association Conference

Pacific Environment Limited (ASX:PEH) is pleased to advise that it is currently exhibiting at the Air & Waste Management Association (A&WMA) - Annual Conference and Exhibition in New Orleans, USA from June 20-23.

This event showcases products including computer hardware and software, analytical and control equipment, environmental engineering, indoor air quality instrumentation, water treatment, government agencies and organisations, hazardous waste disposal, and other participants in the Environment and Waste Management industry.

Managing Director Mr Robin Ormerod said,

"The Annual A&WMA conference is a signature event in the USA that provides a strategic opportunity to showcase and introduce EnviroSuite to a large number of potential clients and prospective partners across government agencies and industry participants in our target markets."

Attached is an EnviroSuite presentation that will be delivered to attendees during the conference.

Managing Director, Pacific Environment Limited

A compliance tool for
air quality professionals

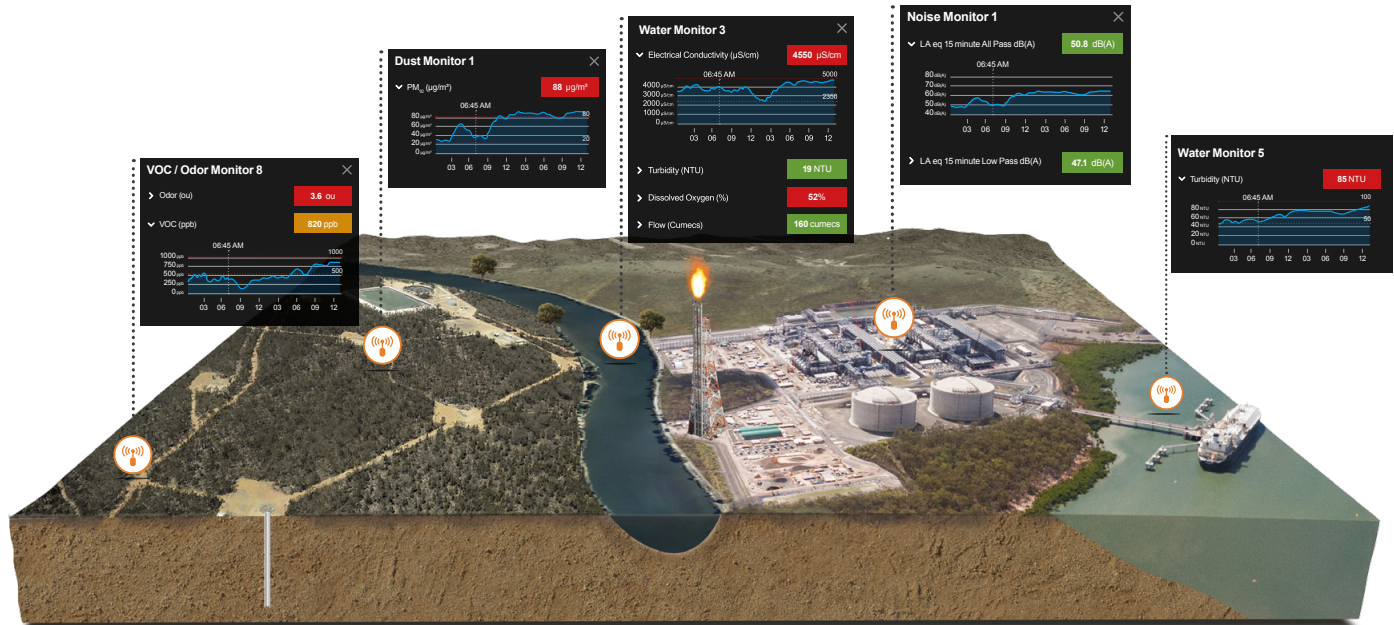

Created by air quality
professionals, for air
quality professionals

EnviroSuite is more than a data management tool or a monitoring platform. It's collated knowledge from leading air quality experts, placed into your hands to empower your department to respond, analyze and predict.

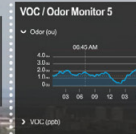

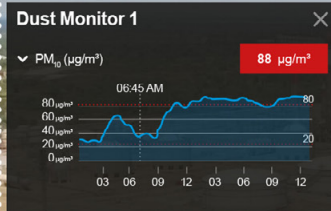

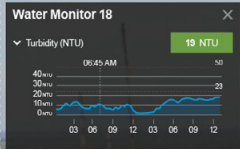

Birds-eye view of a facility or an entire region

EnviroSuite integrates with your existing monitoring network so you can access highly-accurate, real-time data in one place. Whether it's from a single facility or spanning your entire department's monitoring network, you'll have a birds-eye view of source or impact data.

Instant alerts of regulatory exceedances

Instant alerts of any current or predicted regulatory exceedances will allow you to make the right decisions to reduce risk, promptly.

ADVISORY

Monitor 24. +72 hours

High levels of VOCs combined with SE winds. Advise shut down of stack 2.

OK

Legal due diligence and community engagement

Your team will stay accountable, on top of compliance issues and reputable in the community with instant access to historical data.

Instantly access any historical data recorded for immediate accountability, to showcase at community facing forums and for use in legal due diligence.

Quantify emissions quickly with automated reporting

As EnviroSuite was created by air quality experts, the system applies the correct air quality and meteorological calculations to automatically quantify emissions and drastically shorten your department's regulatory reporting efforts.

This means you'll get detailed, compliance reports at a moment's notice.

Get a 72 hour outlook with predictive modeling

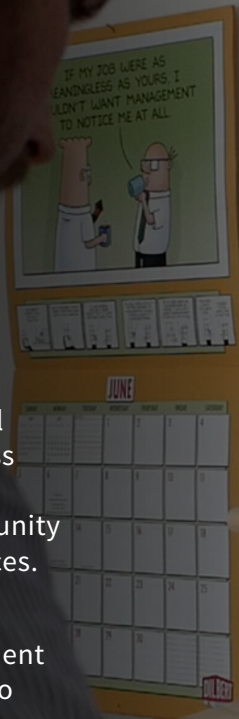

EnviroSuite's Predictive air quality capabilities are powered by recognized models that provide your department with valuable lead time to manage emissions and potential community impacts.

Stay on top of community Issues

Backtracking using meteorological techniques gives you instant access to information to help identify the source of incidents causing community complaints or fence line exceedances.

EnviroSuite's incident intelligence module will provide you with incident workflow functions and analyses to international standards.

Stringent security that
means your data stays
confidential

EnviroSuite is powered by Amazon's cloud
server. This means data security is of the
highest certification standards.

World leading environmental technologies backed by scientific expertise

With an enviable client list of international operators, EnviroSuite is an integral part of the operations of some of the biggest names in environmental management.
