CONSOLIDATED TIN MINES LIMITED

AMENDED MARCH 2016 QUARTER ACTIVITIES REPORT

CORRECTION TO PREVIOUSLY RELEASED QUARTERLY REPORT DATED 29 APRIL 2016

A correction has been made to the third table (below) relating to the Jackson drill Hole's JA087b and JA088 Table where Au was mistakenly inserted instead of Ag. Note this was previously announced correctly in ASX announcement dated 10 March 2016.

No other changes have been made to the release.

Consolidated Tin Mines Limited (CSD) (Company) is pleased to present the activities report for the March Quarter.

BASE METAL PRODUCTION

During the March Quarter 118,790 tonnes of ore was produced from the Snow Peak Mining Pty Ltd (SPM) owned Mt Garnet underground mine located adjacent to the Mt Garnet processing plant. The SPM owned Surveyor Mine located 180k south of Mt Garnet remains on temporary care and maintenance.

During the March 2016 Quarter 8,519 DMT of Zinc concentrate and 907 DMT tonnes of Copper concentrate was hauled to Townsville Port for export.

The Mt Garnet concentrator continues operating 24/7 with through-put of approximately 1,149.7 ore tonnes per day.

MT GARNET TIN PROJECT

The Company has located two areas close to Gillian that potentially carry tin bearing ironstone skarn with similar metallurgical characteristics to Gillian ore. These areas are the Tin01 and Wriggly prospects.

These two prospects are part of the SPM assets purchased from Kagara Ltd which have not previously been investigated by CSD for tin.

CSD has identified anomalous areas of mineralisation associated with the tin bearing ironstones. The Company has undertaken sampling and mapping of the outcropping structures that have identified similarity to Gillian mineralogy (refer ASX release 11 April 2016).

EXPLORATION ACTIVITY

The Company, through a farm-in agreement between SPM and Wanguo International Mining Group (Wanguo) over SPM's Exploration tenures, is actively exploring within the highly prospective Einasleigh/Greenvale areas, however the program was put on hold for the quarter due to the North Queensland wet season. Results from drilling undertaken in the previous quarter were released on 10 March 2016

Summary of Results

Kaiser Bill – Drill Hole KB153 and KB155

As significant mineralisation was achieved in drill hole KB151 (ASX release 15 October 2015), drill testing was undertaken on the southern down-dip edge of Kaiser Bill. Of particular note was the copper and gold grades being well above the grades of the current resources.

Jackson – Drill Hole JA087b and JA088

As significant mineralisation was intersected in drill hole JA086 (ASX Release 15 October 2015), drill testing to extend the Jackson resource was undertaken. The additional drilling within the Jackson deposit opens up a significant area of potential mineralisation, as drilling previously suggested that this resource terminated at earlier drill hole JA004.
