About Talga

Talga Resources Ltd (“Talga”) (ASX: TLG) is an advanced materials company with a patent pending technology to produce industrialised supply of graphene and micro to nano-graphite sourced from its 100% owned natural graphite ore deposits in Sweden. Talga’s unique deposits and proprietary processes provide a potential nominal cost path to high quality graphene production that overcome cost and volume barriers to graphene supply, thereby unlocking commercial applications.

Ultra fine graphite as well as graphene platelets are being manufactured for industry partners at Talga’s German pilot test-work facility. End applications of materials may include the production of intermediates such as inks, polymers, master-batches and dispersions based on Talga graphene and ultra fine graphites.
