

TRAKA RESOURCES LIMITED

ABN 63 103 323 173

Quarterly Activities Report for the three months ended 31 March 2016

Summary

- The Company's Ravensthorpe tenements are increasingly valued for their lithium potential. Commencement of mining by General Mining and Galaxy on the abutting Mt Cattlin Lithium Mine and exploration by other parties in the Ravensthorpe region is highlighting their prospectivity.
- Traka holds a 20% free carried joint venture interest in a tenement adjacent to the Mt Cattlin Lithium Mine with known lithium mineralisation in pegmatite dykes. Also, the large mineralised flat lying pegmatite dykes being mined at Mt Cattlin may extend into this tenement.
- A number of pegmatite dykes were intersected while drilling on the Mt Short Base Metal Project and these have been sampled for lithium and tantalum mineralisation.
- Drilling has been completed and the results awaited from the Mt Short Base Metal and Yallalong Antimony Projects.
- The evaluation of other exploration projects is continuing.

Figure 1. Location plan of Traka's projects

The Ravensthorpe Project

Traka's interest in the Ravensthorpe Project comprises three parts (Figure 2): the 20% free carried to production interest with Galaxy Resources Limited ("Galaxy") in an abutting tenement to the Mt Cattlin Lithium Mine (Figure 3), the 100% owned Mt Short Base Metal Project and a 20% free carried interest on the Bandalup Joint Venture area with ACH Minerals Pty Ltd ("ACH").

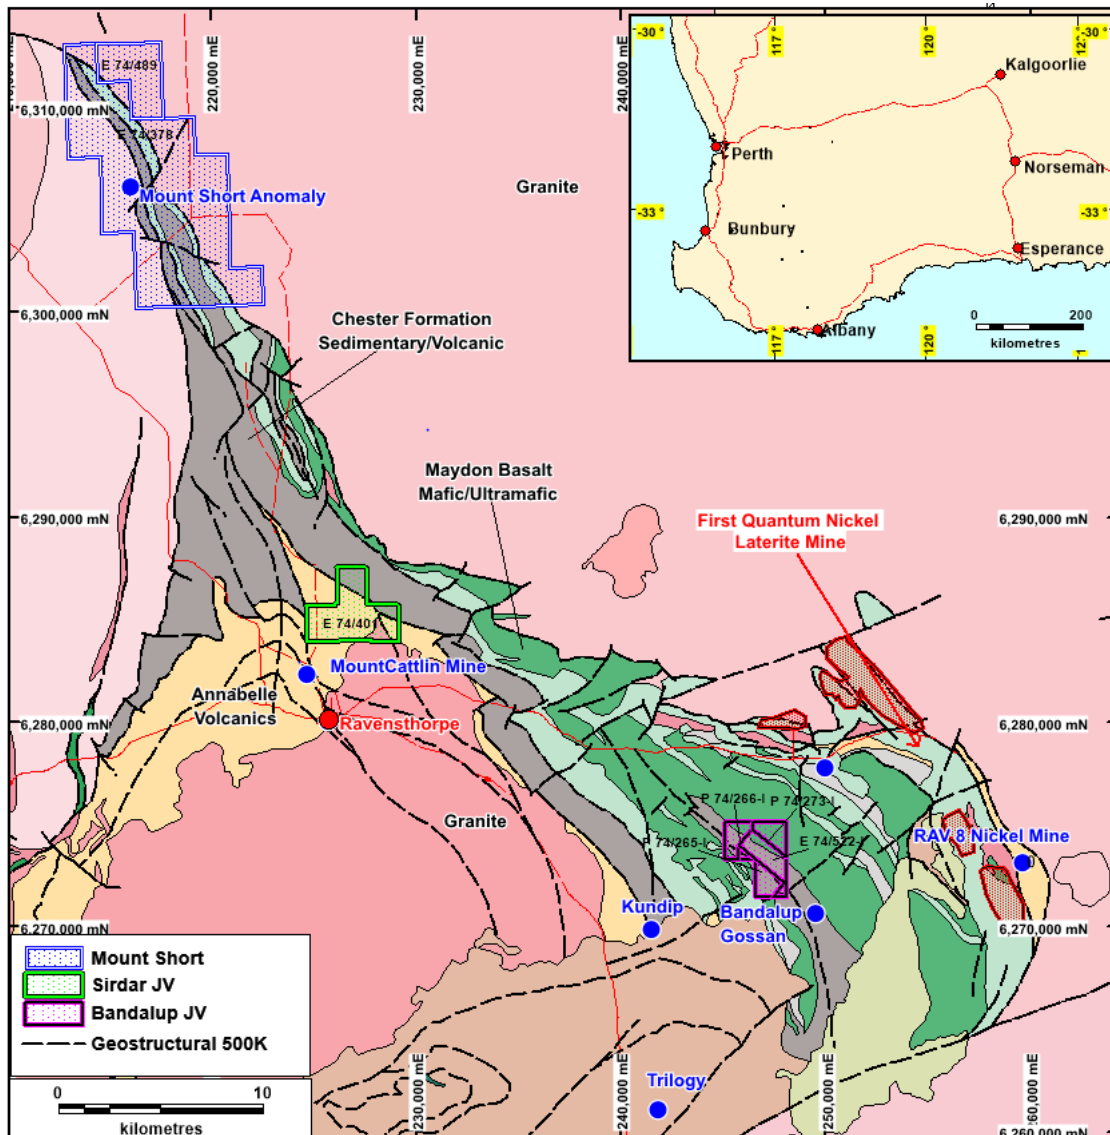

Figure 2. Location plan of the Ravensthorpe Project

The Galaxy Joint Venture Mt Cattlin: **(Traka Free Carried to production 20%)**

No joint venture activity has been reported this quarter but it is encouraging to see General Mining Corporation Ltd ("GMM") and Galaxy Resources Ltd ("Galaxy") move rapidly to restart mining operations on the abutting Mt Cattlin Lithium and Tantalum Mine (1)

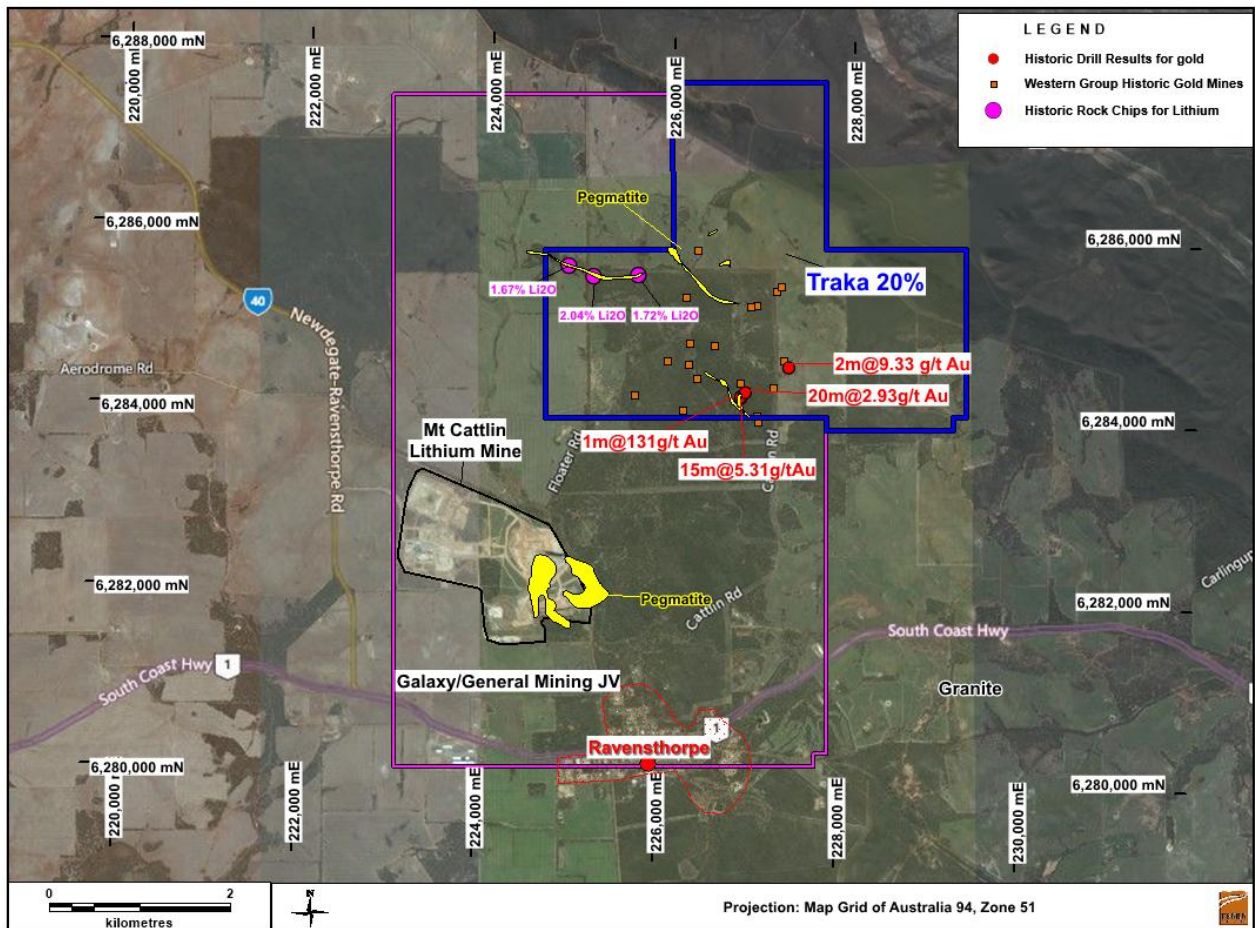

Figure 3. The Mt Cattlin Lithium Mine within the Galaxy/GMM mine tenements plus Traka's 20% joint venture tenement in the north-east quarter.

There are mineralised lithium and tantalum pegmatite dykes in the joint venture tenements (peak values between 1.67% and 2.04% Lithium) highlighted by historic exploration work programs (Figure 3). Previous geological mapping and drilling by Traka on gold prospects also highlighted the presence of other pegmatite bodies that have not been investigated for their lithium and tantalum content. The shared geological setting and the proximity of the Mt Cattlin Mine (Figure 4) underline the potential value of this project to the Company.

Traka has a 20% free carried interest through to production on any lithium and tantalum mined and a 20% free carried interest through to completion of a feasibility on any other commodities such as gold that occur on the joint venture tenements.

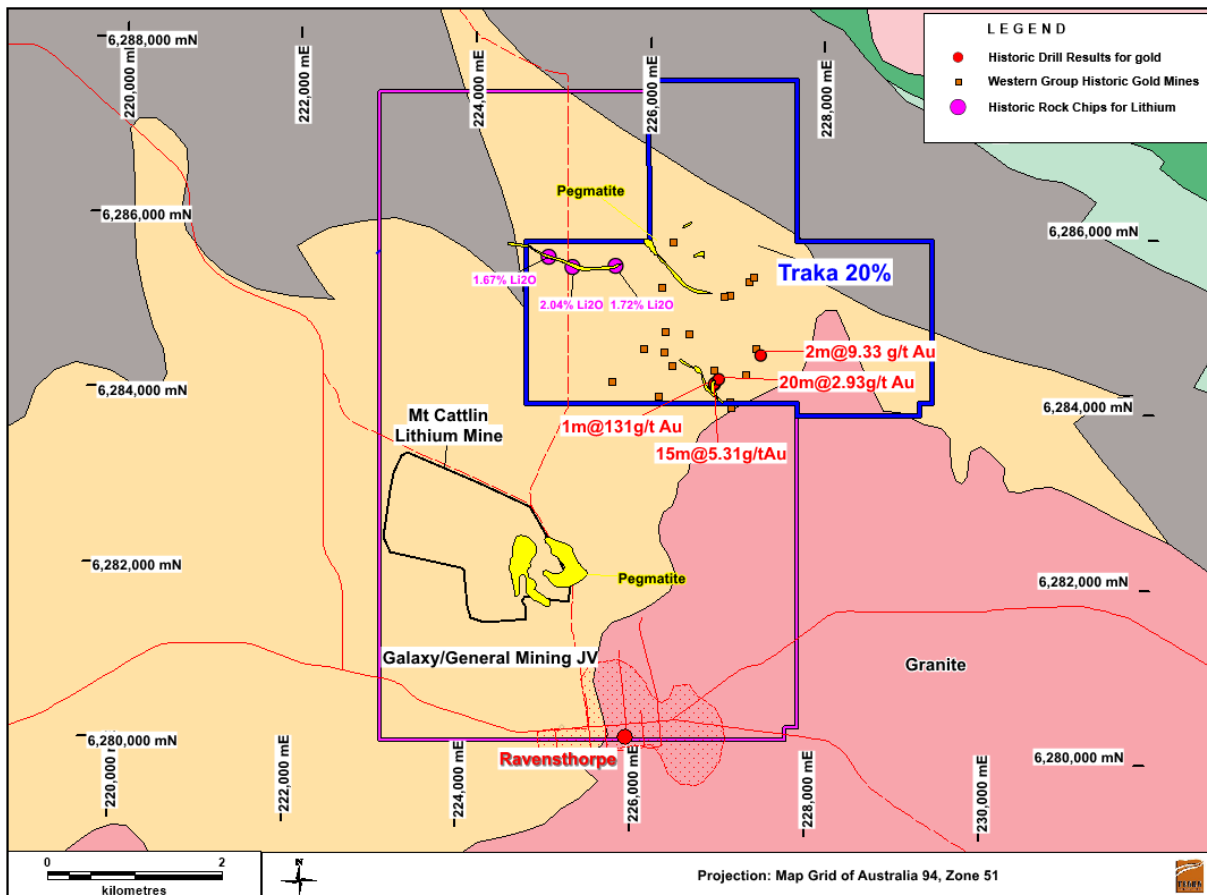

Figure 4. Geological setting of the Mt Cattlin Mine area showing historic lithium and gold exploration results.

The Mt Short Base Metal Project:

A three hole diamond drilling program comprising of 800.4 metres was completed at the Mt Short Base Metal Project on 21st March testing three electromagnetic targets (MS1, MS2 and MS5) as planned (Figure 5). The assay results for this program are awaited and compilation is still underway but the following preliminary observations were made:

- The MS1 conductor is a rich sulphidic contact zone on the contact between mafic and granite intrusive rocks. There is some scope for associated gold (Au) mineralisation.
- The MS2 conductor was not accounted for although minor levels of copper mineralisation were observed in the target position. It is possible the conductor is below the copper position as the hole was designed to hit the top and shallowest part of the modelled conductor body.
- The MS5 conductor was intersected as modelled and is associated with massive sulphide, comprising mostly pyrrhotite and pyrite. Broad low levels of lead (Pb), zinc (Zn) and copper (Cu) mineralisation were observed in the hanging wall sequences above the massive sulphides.
- A number of pegmatite dykes were intersected in this drilling and are being sampled and petrologically examined for lithium and tantalum mineralisation.

Aside from the lithium potential, the preliminary observations relating to the base metals mineralisation (i.e. lead, zinc and copper), indicates the presence of a mineralised system with analogies to Volcanogenic Massive Sulphide (VMS) or Sedimentary Exhalative (SEDEX) ore

deposit types. The closest nearby deposit of this nature, 50 kilometres away, is the undeveloped Trilogy Deposit (4.5 million tonnes with 1%Cu, 2.5%Pb, 1.4%Zn, 0.8 gram per tonne (g/t) Au and 1.4% silver (Ag)) owned by Silver Lake Resources Limited (2). The host rock stratigraphic sequence at Mt Short correlates quite well with that at Trilogy and both probably belong to the Chester Formation on the eastern margins of the Ravensthorpe Greenstone Belt (Figure 2).

This latest drill program adds to the previous work completed on an 8 kilometre long prospective zone on the northern margin of the Ravensthorpe Greenstone Belt. This northern margin is entirely located within freehold farming land where there is very limited rock exposure. No specific follow-up exploration plans are made while awaiting assays and geological compilation, but it is anticipated that the results will be positive and lead to a decision to undertake further drilling and geophysical work.

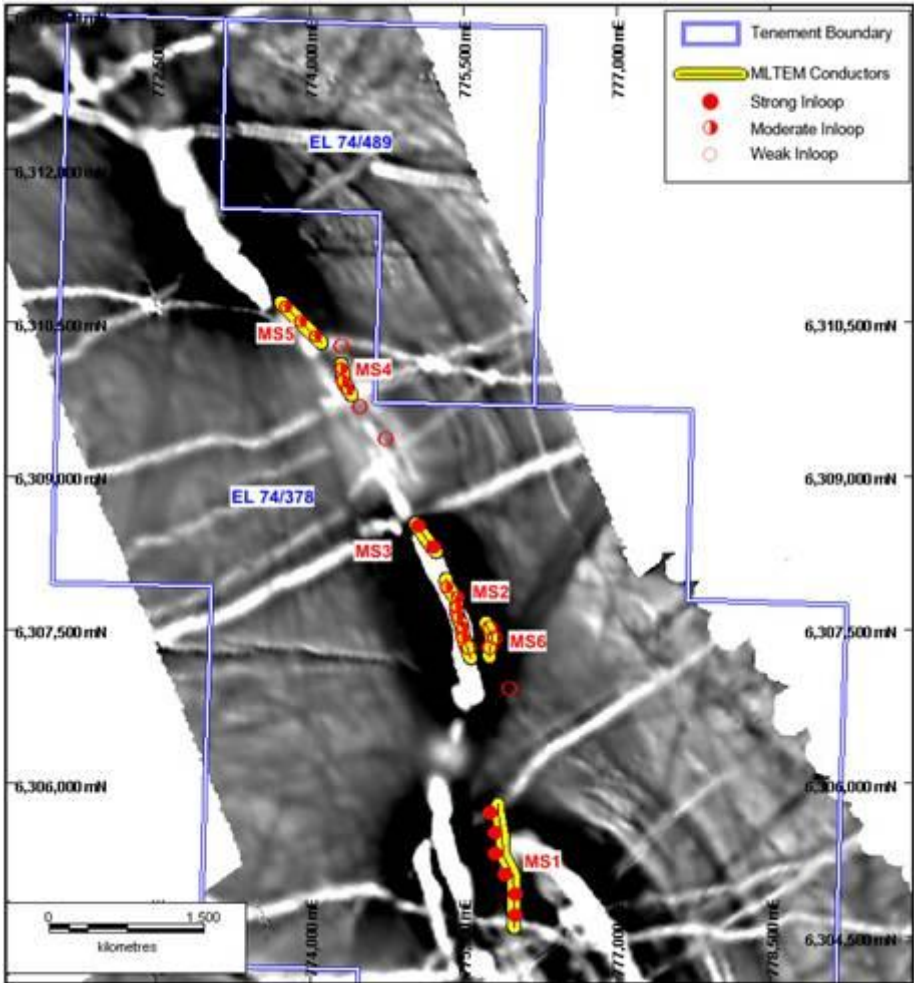

Figure 5: Grey scale aeromagnetic image showing the EM anomaly positions

Bandalup Joint Ventures
(Traka Free Carried 20%)

No exploration information has been provided for this joint venture.

On the 29th of February Traka’s Joint Venture Silver Lake Resources Ltd assigned its joint venture interest at Bandalup to ACG Minerals Pty Ltd. Traka has agreed to this assignment on the basis that Traka’s 20% Free Carried interests are preserved.

The Yallalong Antimony Project *(Traka earning up to 80%)*

A second reverse circulation ("RC") drill program comprising 16 holes for 686 metres was completed in early April. Assay results are awaited and geological compilation is underway. Initial observations indicate that the drilling has expanded the known mineralised zone reflecting the surface geochemical anomaly footprint and extending over about 350 strike length. A series of high grade narrow mineralised veins and structures make up this zone (Figure 6).

The other antimony prospects previously reported to the north of the drilled area attest to other antimony targets in the region (3). No further work has been done on these while drilling has remained the focus.

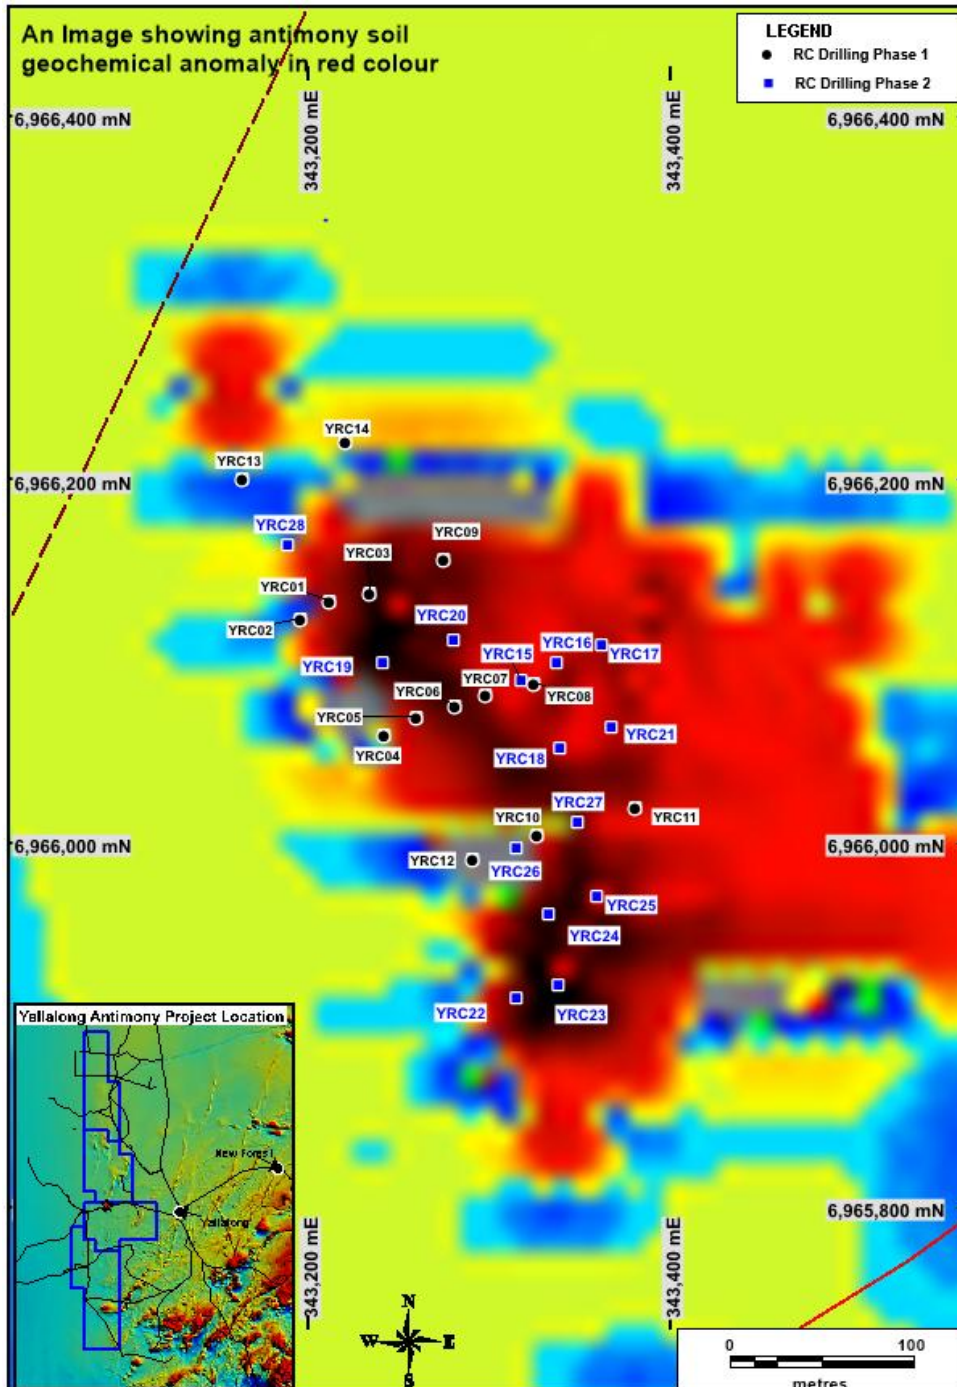

Figure 6. Yallalong Antimony Project showing drillhole locations over an antimony soil geochemical anomaly image (shown as red colour)

The Musgrave Project

The Company continues to seek a joint venture partner and deal with permitting on this very prospective and drill ready project. Seven Spectrem electromagnetic targets ("Spectrem") have been highlighted from previous airborne surveys in the Latitude Hill area of the Musgrave Project (Figure 7).

The Spectrem targets are in favourable geological positions for sulphide associated nickel, copper and platinum mineralisation within feeder pipe bodies associated with the late phase mafic and ultramafic intrusives of the Giles Complex. All of the targets come within 100 to 300 metres of surface and are within reach of conventional RC or diamond drill rigs.

The Latitude Hill Spectrem targets are rare opportunities to advance exploration straight to drilling in a highly prospective Proterozoic terrain which already has very significant resources endowment at Babel, Nebo, Succoth and Wingellina. Three EIS ("State Government Exploration Incentive Scheme") grants totalling \$432,000 is available to offset the direct drilling costs of this drill program. The identification and selection of the Spectrem targets culminates from many years of work and experience in the region.

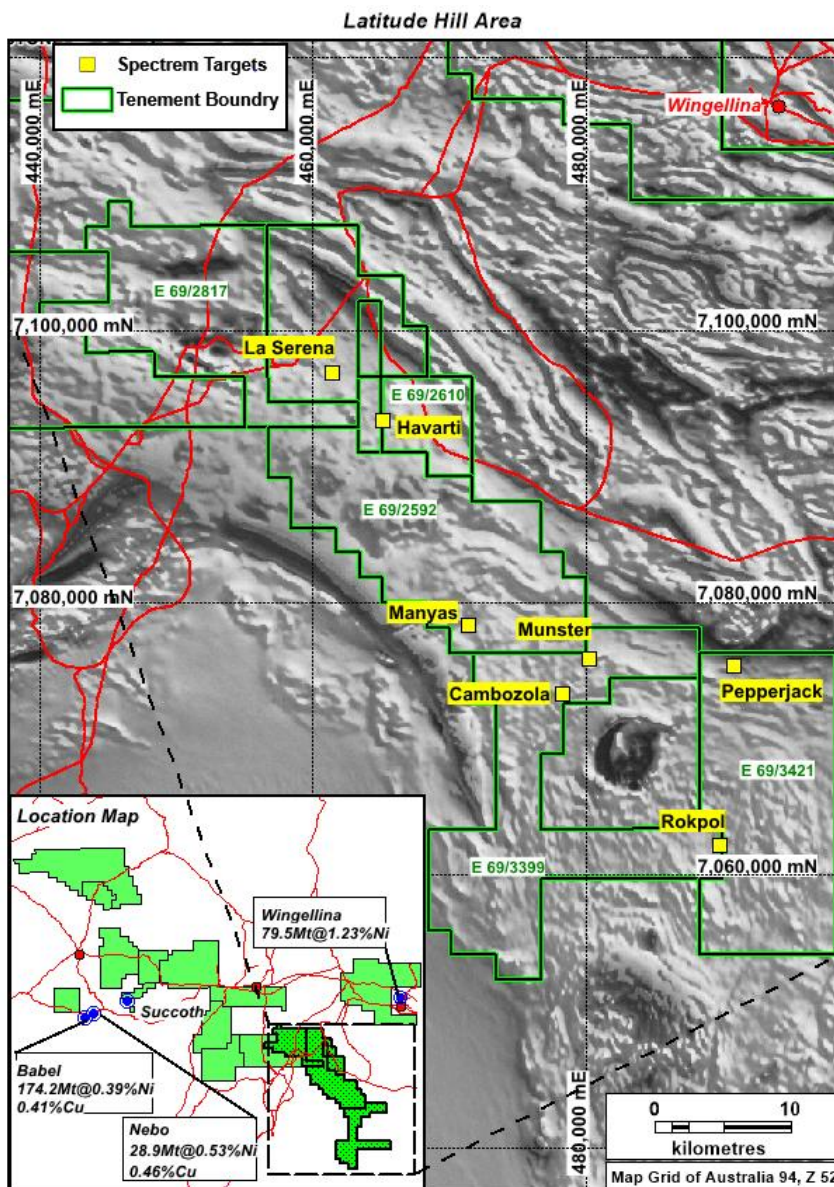

Figure 6: Greyscale aeromagnetic image showing the position of the 7 Spectrem targets.

New Project Development

Whilst the Company is busy on several projects, ongoing efforts will continue to be made for other good opportunities to expand the company's exploration portfolio. The present period of depressed market conditions is a good leverage opportunity into new projects that can form part of the Company's longer term future.

Patrick Verbeek
Managing Director

COMPLIANCE STATEMENT

The information in this report that relates to Exploration Targets, Exploration Results, Mineral Resources or Ore Reserves is based on information compiled by Mr P Verbeek a Competent Person who is a Member of the Australasian Institute of Mining and Metallurgy and is engaged full time as the Managing Director of the Company. Mr Verbeek has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Verbeek consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements and petroleum tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement or petroleum tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report.
- 5 **Accounting Standards** ASX will accept, for example, the use of International Financial Reporting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
