

# BLIS M18™ Achieves US FDA GRAS “No Objection” Status

Blis Technologies Limited announces that their 2<sup>nd</sup> probiotic strain BLIS M18™, has had the issuance of a US Food and Drug Administration ‘Letter of No Objection’. This follows the BLIS K12 “Letter of No Objection” in 2016.

The Letter of No Objection, more commonly known as GRAS or ‘Generally Recognized As Safe’, is another recognition of the robust data supporting Blis probiotics.

It adds a new level of credibility for BLIS M18™ and has the potential to open opportunities with larger consumer food and beverage companies in the US, but also is recognised as a relevant and credible safety assessment by other countries and multinational companies.

Through the GRAS program, companies may submit their determination supported by research and expert review that a specific ingredient is Generally Recognized As Safe. The Letter of No Objection means that the FDA has reviewed the data and has no questions regarding the notice submitted.
