ASX Announcement / Media Release

17 April 2009

FOCUS ON PROVISION OF POWER

Further to the recently announced Heads of Agreement with Carbon Energy Limited, Eneabba Gas Limited advises that a program of up to 5,500 metres of mud rotary and core drilling will commence next week on its Sargon Group of coal tenements near Dongara, Western Australia. A UDR 1200 Rig will be mobilised on 20 April under a contract with Mosslake Drilling Services Pty Ltd.

This drill program forms part of the due diligence to assess the underground coal gasification (“UCG”) potential of this large land holding, with the ultimate objective being for this technology to provide the fuel source for the Company’s proposed Centauri 1 power station at a significant commercial advantage to alternative fuel sources.

Upon successful completion of Heads of Agreement with Carbon Energy Limited, the Company’s sole focus will be to become a successful power station company, with efforts continuing to procure contracts for off-take of power from Centauri 1. The WA State Government’s initiatives for regional development in WA’s Midwest region augur well for completion of the power station.
