Atocha Project Update

Future Corporation Australia Limited (ASX: FUT) advises that pressure testing of the HM Brian No.1 well casing as part of the preparation for perforation has identified a small leak which is currently being isolated and repaired.

Due to the delay for repair, the perforation and flow testing of the well in the Tuscaloosa sand, at a depth of just over 17,000 feet, are now planned for next week.

Atocha Project Description

The Atocha Project, located in East Baton Rouge and East Feliciana Parishes in Louisiana, covers 6,400 contiguous acres within the up-dip fairway of the Tuscaloosa Trend. The Tuscaloosa Trend was discovered in 1975 by Chevron. It has produced over 2.8 Trillion Cubic Feet (TCF) of natural gas and 120 million barrels of condensate over the past 32 years.

Atocha is located five miles north of BP's Port Hudson Field which is the best producing field in the trend and contains the HM Brian No.1 well which was drilled by Shell Oil in 1980 and cased to a depth of approximately 17,700 feet. Petrophysical analysis has concluded that this well contains over 125 feet of bypassed Tuscaloosa pay sand. With the benefit of hindsight and some 30 years of experience in the Tuscaloosa Trend, experts have indicated that a discovery of this calibre would be completed for production. The first Atocha prospect will be tested by re-entering the HM Brian No.1 well.

The Atocha Project area is prospective for oil and gas with a target size of 1.2 Trillion Cubic Feet Equivalent (TCFE) of recoverable gas equivalent for the entire acreage block.

ASX listed Pryme Oil and Gas (ASX: PYM) is operator of the Atocha project and has a 25% working interest in it. Pryme is an oil and natural gas producer and explorer with a focus on the oil and gas producing Gulf States within the USA. Pryme's offices are located in Brisbane, Australia and Houston, Texas.
