

## ASX RELEASE

14 December 2009

General Manager  
The Company Announcements Office  
Australian Securities Exchange

### REGISTRATION OF PATENT IN AUSTRALIA

Island Sky® Australia Limited (ASX:ISK) (**Island Sky®**) is pleased to announce that it has received notice from IP Australia of the registration of an Australian patent in relation to its unique 'air to water' technology. The company originally filed for the patent in 2005.

Entitled '*Multipurpose adiabatic potable water production apparatus and method*', the patent covers the underlying technology that is used in both the Skywater14 machine and the Skywater300 machine.

Managing Director, Richard Groden said "The registration reinforces the uniqueness of our technology in the marketplace. Other competing technologies uses age-old dehumidification or desiccant based methods, which are generally not patentable, except for minor improvements to filtrations systems."

"Island Sky's technology, on the other hand, is based on refrigeration technology and represents a step change in the water production industry. Our machines produce more water with less energy than any other machine we have come across. Our replacement filters and consumables are also some of the cheapest on the market," Mr Groden said.

In optimal climatic conditions, the Skywater 300 uses approximately 7-10 KWh while the Skywater 14 uses approximately 800w.

Yours sincerely,

**Richard Groden**
