"5.4 Notes to Merged Group pro-forma balance sheet

(a) The loans of \$14,282,000 included within MSF's current liabilities represent working capital funding facilities of \$8,398,000 and \$5,884,000 of other facilities. All of these current liabilities will be repaid in the normal course of business from the proceeds of the 2009 season. As at 30 June 2009, MSF had unutilised facilities of \$7,602,000.

(b) MSF enters into derivative contracts which protect the company against movements in sugar prices and in the US dollar/Australian dollar exchange rate. These contracts have the effect of locking in a future Australian dollar sugar price.

MSF's policy allows pricing in respect of up to 50% of estimated production (3 seasons forward), up to 60% of estimated production (2 seasons forward) and increasing to 75% (1 season forward) subject to predetermined target prices being available. These forecast production percentages are considered 'highly probable' of being achieved.

The liability as at 30 June 2009 reflects the fair value of the difference between the forward Australian dollar sugar price as at that date (based on forward US dollar contracts and forward US dollar sugar price) compared with the Australian dollar hedged sugar price.

These derivative arrangements are usual and common for the sugar industry."
