

Quarterly Report for the period ending 30th June 2009

Highlights

- Rubicon retains cash of \$3.3 million (as for March 2009) due to corporate cost-saving initiatives and reimbursements and payments made under the Warburton Joint Venture Agreement.
- Two new joint ventures completed over exploration tenements at the Yindarlgooda project with Integra Mining Ltd and Quadrio Resources Pty Ltd (a wholly owned subsidiary of Dominion Mining Ltd). Rubicon now has potential exploration funding of up to \$7.9m in four separate joint ventures at Yindarlgooda.
- Rubicon successful applied for funding for the Warburton Project from the Western Australian Co-funding Government-Industry Drilling Program. Funding of up to \$148,400 has been granted to offset up to 50% of direct drilling costs associated with part of the 2009 reverse circulation drilling program and an 800m diamond hole to be drilled in late-2009 or early-2010.
- An inaugural 18-hole, 2,422 metre percussion drilling program was completed at Warburton on various geochemical and geological targets at the Warburton Copper Targets.
- Aggressive tenement acquisition continued at the Celia project in the Laverton Tectonic Zone, one of Australia's premier gold belts. Rubicon has now applied for approximately 625sq.km. of high quality gold exploration ground at Celia.
- Detailed data compilation and initial geological and geophysical interpretation at Celia has defined over thirty gold exploration targets. Field checking of these targets is in progress.

ASX Code:	RBR
Issued Shares	80.0m
Issued Options	8.25m
Cash	\$3.3m

Corporate

As a result of corporate initiatives instigated early in the year and reimbursements and payments for exploration under the Warburton Joint Venture agreement, Rubicon retains cash of \$3.3m (same as for March 2009).

During the quarter Rubicon has continued to pursue numerous corporate and project acquisition opportunities. A number of these opportunities were progressed to an advanced stage, but have not as yet come to fruition.

In keeping with its stated objectives, the Company has entered into two additional significant joint venture agreements over tenements at its Yindarlgooda project with Integra Mining Ltd and Quadrio Resources Pty Ltd (a wholly-owned subsidiary of Dominion Mining Ltd). This means that Rubicon has secured potential exploration funding of up to \$7.9m in four separate joint ventures at Yindarlgooda.

The Company continues to rationalise its tenement package and has reduced its holding to just over 7,000sq.km. (from 9,000sq.km. last quarter). This will continue to reduce over time as ongoing reviews focus on higher quality exploration acreage.

The Company has 80.0 million shares and 8.25 million unlisted options on issue.

Operations

Following ongoing tenement rationalisation, Rubicon now controls approximately 7,000km² of prospective tenements in Western Australia and Queensland.

Exploration for the quarter included:

- An 18-hole, 2,422 metre reverse circulation drilling program was completed at the Warburton Joint Venture.
- Aeromagnetic data was received for the detailed survey completed at Warburton in the March 2009 quarter. Detailed integration of all data is in progress to target further drilling.
- Continued aggressive tenement acquisition at the Celia project area. Data compilation and initial geological interpretation completed. Best quality multiclient and open file aeromagnetics have been purchased to aid in interpretation.
- Over thirty gold targets defined at Celia to date and field checking of these is in progress
- 7,000 metre aircore drilling program planned for the Rocky Dam Joint Venture at Yindarlgooda.
- Bluestar Resources Ltd completed six aircore holes for 244m at the Mt McLeay Joint Venture at Yindarlgooda.

1.0 WARBURTON

The Warburton Project comprises 2,800km² of exploration licences within the western Musgrave Province (Figure 1). Rubicon is exploring this largely unexplored terrain for stratabound sediment-hosted copper (eg. Mt Isa and Michigan Copper belt) and Iron Oxide Copper Gold Uranium mineralisation (eg. Olympic Dam, Prominent Hill and Carrapateena) in joint venture with major Rubicon shareholder; Vale Australia EA Pty Limited, a wholly owned subsidiary of Companhia Vale do Rio Doce (Vale).

Vale is earning a 51% interest in the project tenements by funding exploration expenditure of \$3 million over three years. Vale can earn up to a 75% interest in the project by sole funding exploration and development expenditure up to the completion of a Bankable Feasibility Study. Rubicon is managing the exploration program.

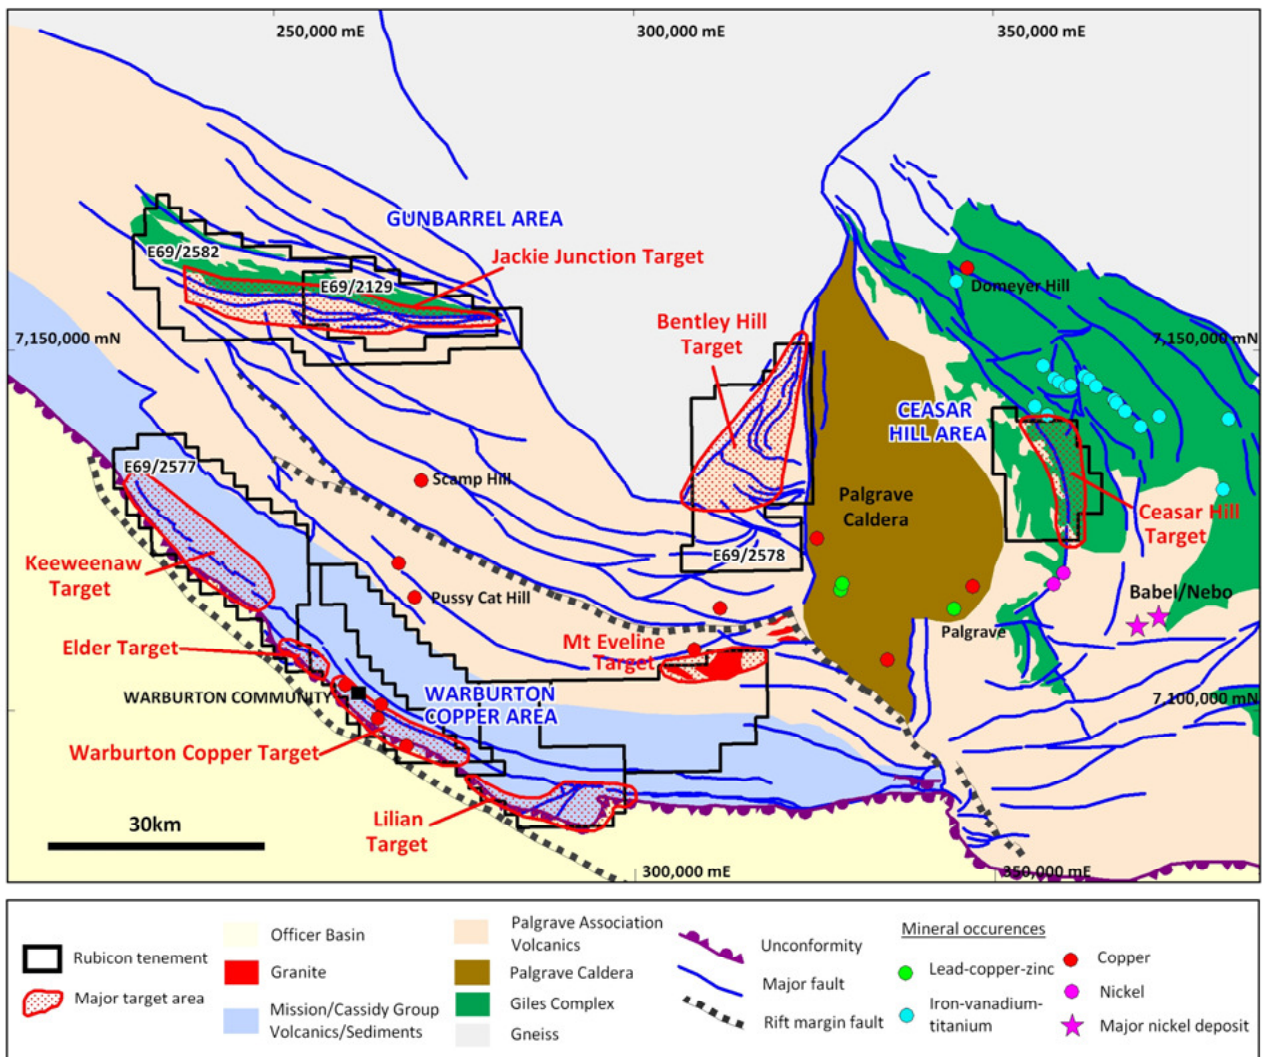

Figure 1 - Warburton Project, Tenements, Geology & Target Areas

Rubicon was successful in an application for funding from the Western Australian Co-funding Government-Industry Drilling Program. The Program is part of the Western Australian Governments' exploration incentive scheme run through the Department of Mines and Petroleum (DMP). Funding of up to \$148,400 has been granted to offset up to 50% of direct drilling costs associated with part of the 2009 reverse circulation (RC) drilling program and an 800m diamond hole to be drilled in late-2009 or early-2010.

An RC drilling program was completed in July to test the down-dip extension of known mineralisation and geochemical anomalies in the Warburton Copper Target (Figures 1 and 2). The Warburton Copper Target has extensive copper mineralisation defined in outcropping copper occurrences and in percussion and diamond drilling from previous exploration, supplemented by Rubicon soil and auger sampling. Additionally, previous shallow vacuum drilling has recorded significant copper anomalies with individual copper values of up to 4.1%. Potential structural and stratigraphic controls on this mineralisation have been identified from Rubicon mapping and geophysical interpretation.

The drilling was designed to test a range of these targets. The completed program consisted of 18 holes for 2,422 metres. Hole depths of up to 150 metres were drilled to provide an immediate scale of mineralisation extent by testing the known surface anomalism at significant depths (Table 1).

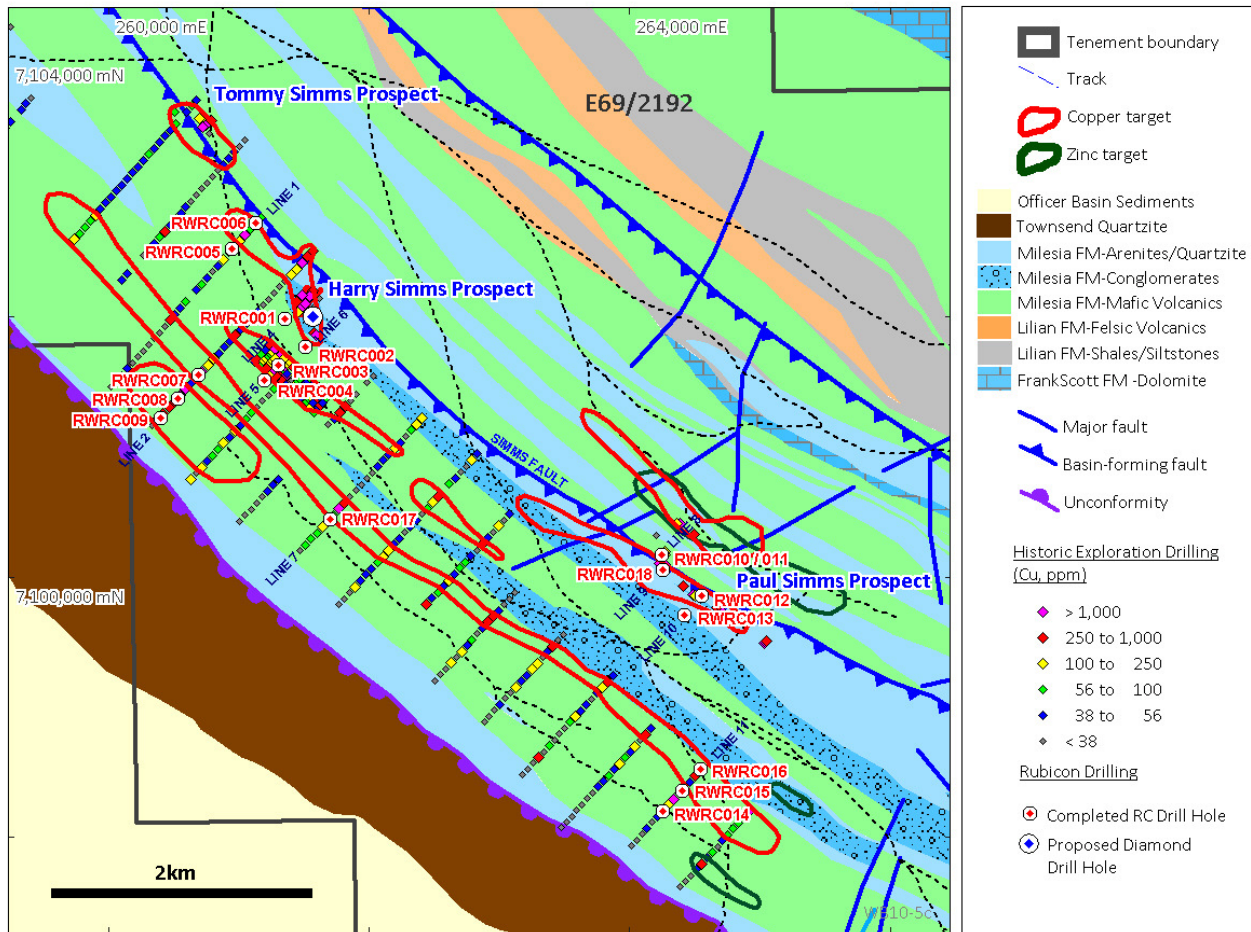

Figure 2 - Warburton Copper Targets - Geochemistry and July 2009 RC Drill Hole Locations

A Niton portable XRF instrument was used to help delineate areas of base metal anomalism prior to assay. Readings were taken on each metre sample for all drill holes. Low-grade copper mineralisation is indicated from the Niton in several holes, including 2m @ 1.87% & 9m @ 0.60% copper in RWRC003, 3m @ 0.15% copper in RWRC004, 3m @ 0.11% copper in RWRC016 and 5m @ 0.11% copper in RWRC018.

The Niton readings are preliminary only and one metre samples over the intervals with base metal anomalism and four-metre composite samples over the remainder of each drill hole have been submitted to ALS Chemex for analysis of a multi-element base metal suite. These assay results are pending.

Table 1. Warburton Copper Target - RC drilling

		RWRC014	264252	7098194	042	-60	150	Previous vacuum drilling anomaly

Given the extensive, but shallow, cover over the 60-kilometre prospective strike extent and the known anomalism in the limited outcropping areas, a 100-metre line spacing aeromagnetic survey was completed in April 2009 over the full extent of this zone from the Keeweenaw to the Lilian target (Figure 1). Results of this survey have been integrated with existing magnetic data.

A revised interpretation based on the results of the drilling (when received) and the new integrated aeromagnetics is in progress and will be completed in the September quarter to focus further drill testing.

In particular, targeting of an 800-metre diamond hole will be undertaken for drilling in late-2009 or early-2010. This hole will be co-funded for 50% of direct drilling costs by the Western Australian government and will target deeper carbonate-rich units adjacent to the major interpreted structure for Mt Isa-style stratabound mineralisation (Figure 3).

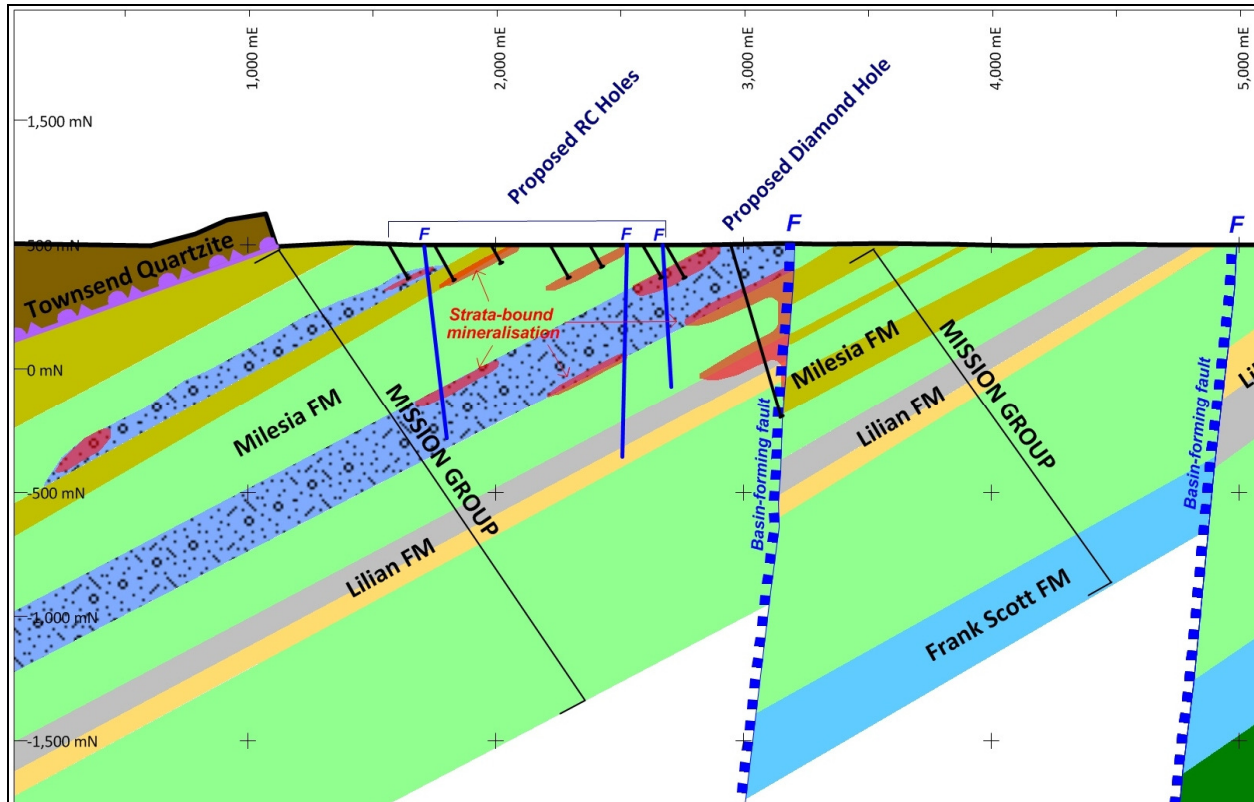

Figure 3 - Conceptual Deep Stratabound Copper Target Model - (note that stratabound mineralisation shown is a conceptual target only) and proposed RC holes are those completed in July 2009

2.0 YINDARLGOODA PROJECT

The Yindarlgooda Project comprises approximately 890km² of tenure centred 55km east of Kalgoorlie on a felsic volcanic centre around Lake Yindarlgooda (Figure 4). Exploration activities during the quarter were limited to the joint venture activities on the Rocky Dam and Mt McLeay tenements. Two new joint ventures have been entered into during or subsequent to the end of the quarter.

2a Peters Dam Joint Venture (Integra Mining Ltd earning 51 to 70%)

Rubicon announced on 16 July 2009 that it had entered into a joint venture agreement on the Mt Monger and Wattle Dam sub-project tenements with Integra Mining Ltd (Integra).

The Peters Dam joint venture comprises approximately 325km² of Rubicon tenements at the southern end of the Yindarlgooda project (Figure 4). Under the terms of the agreement, Integra may spend \$1.5m over three years to earn a 51% interest in the tenements. At Rubicon's election, Integra may then earn an additional 19% by the additional expenditure of \$1.0m over a further two years. Integra must spend a minimum \$250,000 on direct drilling costs within twelve months before withdrawal.

The Peters Dam tenements subject to the agreement are located adjacent to Integra's tenements in the region and include tenements to the north and east of Integra's Salt Creek Gold Deposit (Figure 4). Rubicon's tenements include the previously reported Salt Creek North, Salt Creek East and Tiger Lily prospects, where Rubicon drilling has defined significant gold anomalism. These results include significant supergene anomalies of 28m @ 0.53g/t gold and 16m @ 0.73g/t gold at Salt Creek North.

Integra is developing a significant gold mining operation focused around Salt Creek and exploration success in the discovery of a commercial deposit by Integra on Rubicon's tenements could expose Rubicon to the potential for early mining without a major capital outlay. For this reason, Rubicon

believes that the exploration of these tenements as part of Integra's near-mine exploration program gives Rubicon the best opportunity for an early cash flow.

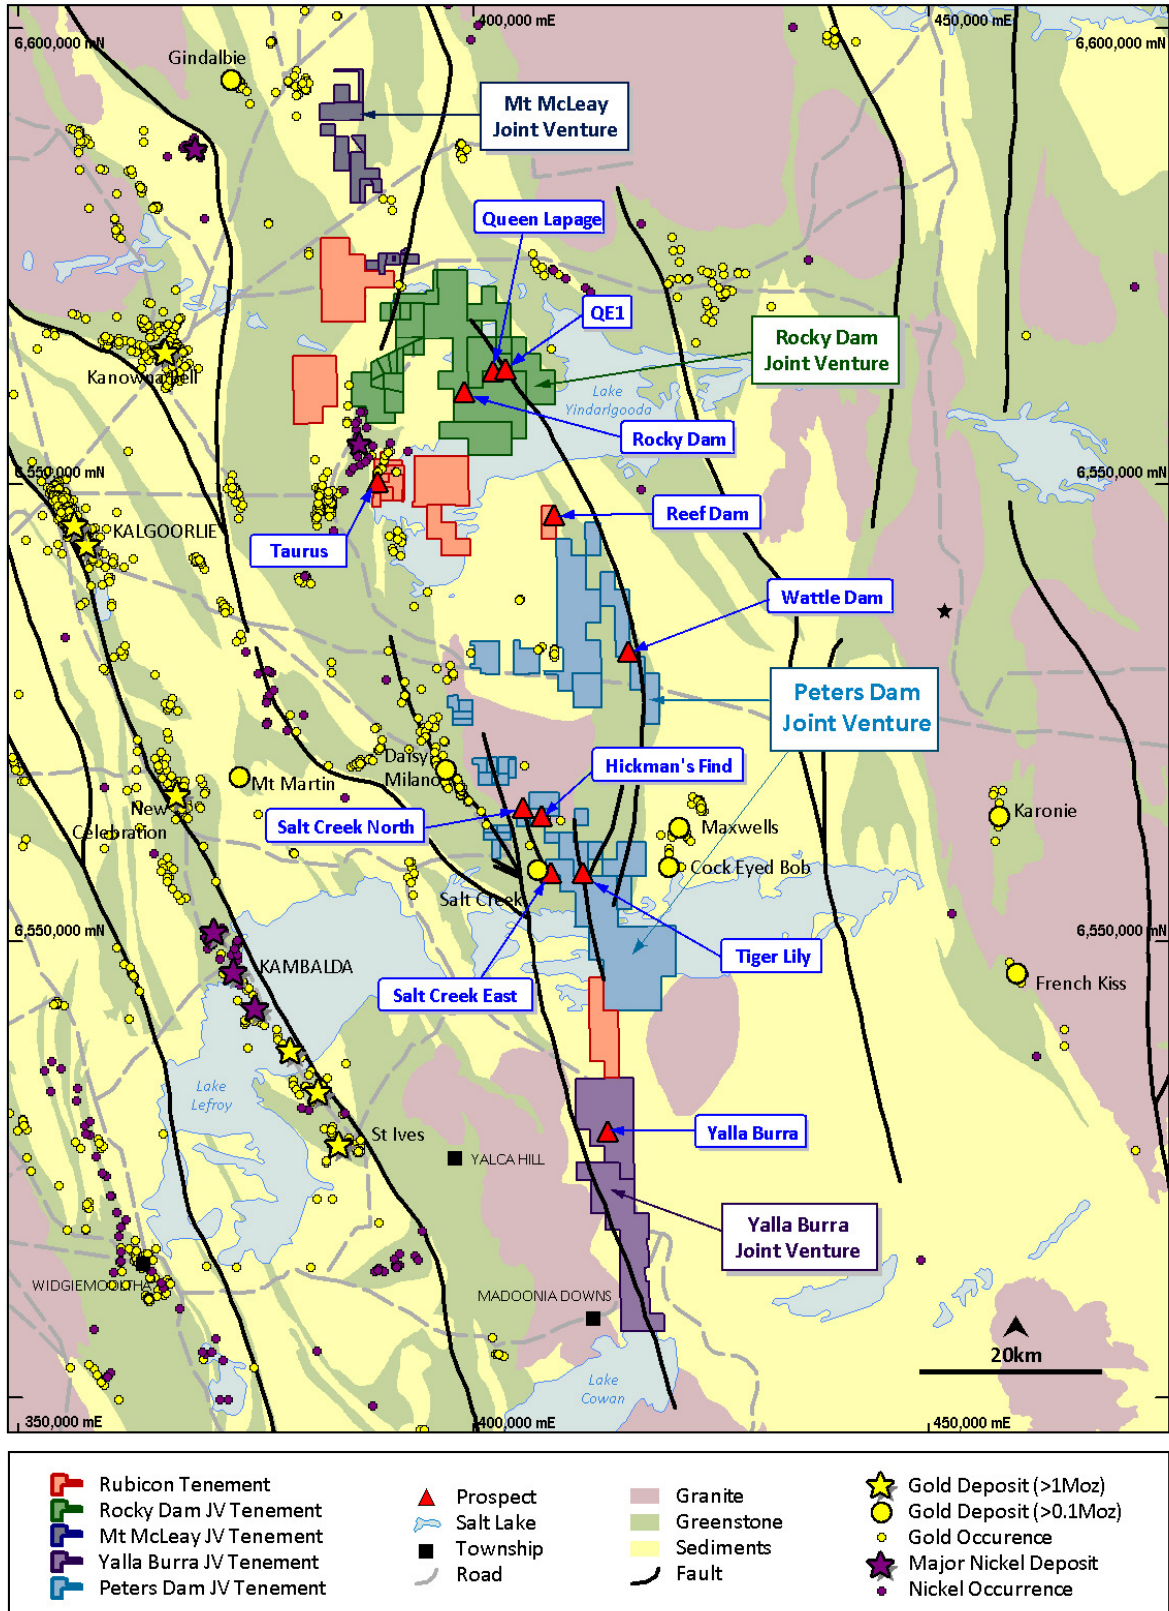

Figure 4 Yindarlgooda Project & Joint Ventures

2b Yalla Burra Joint Venture (Dominion Mining Ltd earning 70%)

Rubicon announced on 4th June 2009 that it had entered into a joint venture agreement with Quadrio Resources Pty Ltd (a wholly owned subsidiary of Dominion Mining Limited) (“Dominion”) on the Yalla Burra sub-project tenements at Yindarlgooda (Figure 4).

Under the terms of the joint venture agreement, Dominion has the right to earn a 70% interest in Exploration Licences E15/918 and E15/1028 by the expenditure of \$600,000 over a four year period. Dominion must spend a minimum of \$70,000 within 12 months of the commencement date before withdrawal.

2c Rocky Dam Joint Venture (St Barbara Ltd earning 51 to 70%)

St Barbara report that exploration work in the June 2009 quarter comprised spectral scanning of 954 stored chip cuttings samples from 101 available RC or aircore drill holes. The objective of the spectral scanning is to define mineral assemblages that are consistent with alteration zones associated with gold mineralisation.

Following ethnographic clearance scheduled for the middle of the September quarter, a 73-hole, 7,000 metre aircore drilling programme is proposed for late in the September quarter or early in the December quarter.

The holes will be drilled vertical and at 200 m intervals on seven separate drill traverses located in the central northern part of the tenement block to the northwest of Queen Lapage (Figure 4).

This programme is expected to be followed up by infill (to 400 x 100 m initially) aircore drilling where there is geochemical encouragement.

2d Mt McLeay Joint Venture (Bluestar Resources Ltd earning 51 to 70%)

BlueStar Resources Ltd reported that it has completed six aircore holes for 244m on the Mt McLeay tenements during June 2009. The drilling mainly followed up on previous low grade gold intercepts in drilling. A best result of 4m @ 1.4g/t gold was recorded.

3.0 CELIA

Rubicon continues to secure tenure at its Celia Project over the southern part of the Laverton Tectonic Zone, one of Australia’s best gold provinces (Figure 5). Some 14 new tenements were applied for during the quarter, although a number of these partly overly existing Rubicon tenure. The project now covers approximately 625 square kilometres.

Rubicon has also secured tenure directly along strike of the Butcher Well, Kangaroo Bore, Dewey and Choir Boy gold deposits/prospects that will be tested for extensions of these mineralised zones. Part of the leases also encompasses the southern continuation of the ultramafic belt that hosts the Eucalyptus Bore nickel laterite mineralisation.

A full review of all existing data for the region has been completed and a preliminary geological and geophysical interpretation has been completed. The data review has outlined over thirty target zones, including anomalous zones from previous exploration and a number of strong structural targets.

Best available multi-client and public domain aeromagnetic data for the region has been ordered and final integration and imaging of this data is expected to be received in August.

Field checking of the defined target areas is in progress.

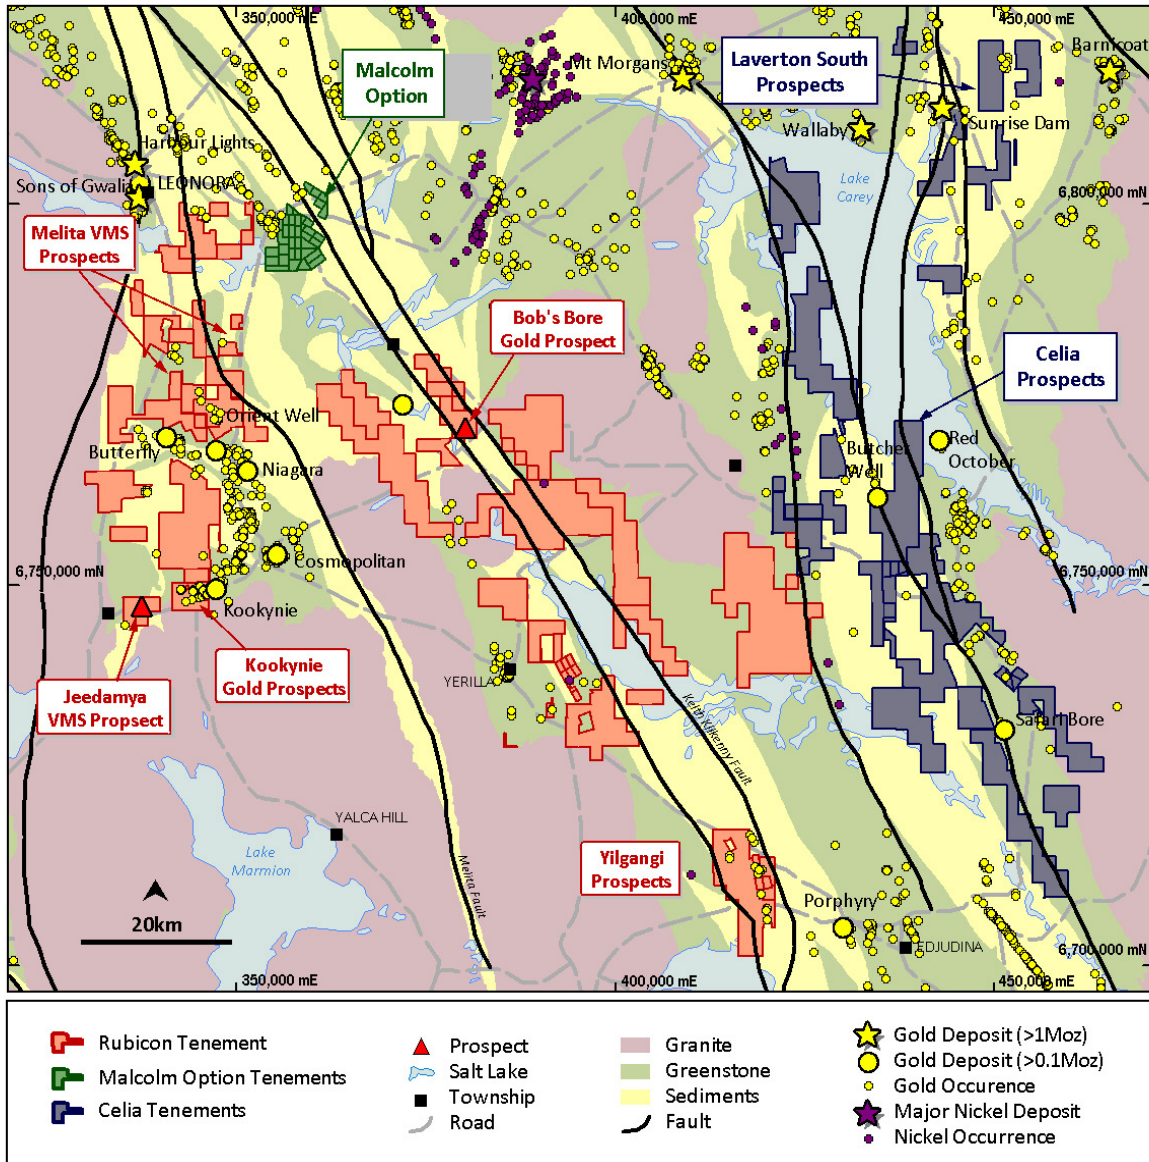

Figure 5 Desdemona and Celia Project Tenements, Geology & Prospects

4.0 DESDEMONA

The Desdemona Project comprises 1,300km² of tenements located to the southeast of Leonora (Figure 5). During the quarter, Rubicon completed a detailed integrated interpretation of the project. Targeting based on this work will be undertaken in the September 2009 quarter.

5.0 BODDINGTON SOUTH

Based on the results of the laterite sampling program reported in March 2009, the Canobie project area was relinquished.

6.0 CANOBIE, BENCUBBIN, ERLISTOUN & MONDOOMA

There was no work undertaken on these projects during the quarter.

The information in this report that relates to Exploration Results is based on information compiled by Mr Peter Eaton, the Managing Director of Rubicon Resources Limited, who is a Member of the Australian Institute of Mining and Metallurgy. Mr Eaton has sufficient experience that is relevant to the style of mineralisation and to of the activity being reported to qualify as a Competent Person as defined in the 2004 edition of the Australasian Code for Reporting of Exploration Results, Minerals Resources and Ore Reserves, and consents to the release of information in the form and context in which it appears here.

Compliance statement

- 1 This statement has been prepared under accounting policies which comply with accounting standards as defined in the Corporations Act or other standards acceptable to ASX (see note 4).
- 2 This statement does give a true and fair view of the matters disclosed.

RS Middlemas
Company Secretary

Date: 30 July 2009

Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 1022: Accounting for Extractive Industries* and *AASB 1026: Statement of Cash Flows* apply to this report.
- 5 **Accounting Standards** ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.

== == == == ==
