

ARUMA COMMENCES DRILLING AT THE GLANDORE PROJECT

The Directors of **Aruma Resources Limited (Aruma) (ASX:AAJ)** are pleased to announce that the planned drilling programme at Glandore has commenced. The program consists of some 3,000m to investigate five large untested soil anomalies and some 1,000m to test the extension of known mineralisation in the northern area of the Glandore Anticline near the Axial Planar and Supergene Zones.

The five large soil anomalies are defined by >100 ppb gold values and are solid areas covering up to 800m by 200m. The initial drilling is being conducted on 100 m spaced lines to a depth of 80m. These anomalies have not been drilled previously despite having numerous small diggings and shafts on or within close proximity.

The previously identified Axial Planar and Supergene Zones are open down dip and along strike and contain earlier reported high grade "lode" style mineralisation.

At the Axial Planar Fault Zone, historical intersections include:

10.25m at 10.27 g/t Au from 58m; and
4m at 18.8 g/t Au from 103m.

In the Supergene Zone area the historical intersections include, in the shallow "Oxide Material":

8m at 10.4 g/t Au from 18m;
9m at 8.37 g/t Au from 17m; and
9m at 3.43 g/t Au from 15m

and in the "Primary Material":

2m at 43 g/t Au from 38m; and
5m at 4.99 g/t Au from 36m.

The location of the drilling and targets are shown in figure 1 below.

Mr Schwann is an employee of the Company. Mr Schwann has sufficient relevant experience to qualify as a Competent Person as defined in the JORC Code (2004) and consents to the inclusion of this information in the form and context in which it appears.

About Aruma

Aruma is a focussed West Australian based gold exploration company which has four prospective project areas within the Eastern Goldfields region of Western Australia. Inclusive of several tenements which are still under application, Aruma's tenement package now totals approximately 400km².

The flagship Glandore Project is approximately 40km east of Kalgoorlie-Boulder. Previous exploration of the Glandore Project, has identified several advanced exploration areas and some twenty under-explored prospective exploration targets.

The Kurnalpi South Project lies approximately 100km to the east of Kalgoorlie-Boulder and comprises three gold exploration prospects designated as Pinnacles South, Mt Quin and Steeple Hill, within a minimally explored area of a greenstone belt that hosts several major mines.

The Laverton East Project is located approximately 20km east of Laverton. Previous exploration of the area includes relatively shallow RAB drilling over much of the tenement and reconnaissance rock chip sampling returned several gold assays of greater than 0.2 g/t.

The Jundee South Project is approximately 50km to the east of Wiluna within the Yandal Greenstone belt. The Gourdis alluvial deposits are thought to have been derived from the west, near or on the Aruma Lease.

Each of the project areas can be readily accessed from the regional towns of Kalgoorlie-Boulder, Laverton or Wiluna.
