ASSAYS FROM INITIAL DIAMOND DRILL HOLE EXCEED VISUAL ESTIMATES

- ASSAY RESULTS RECEIVED FROM DRILL HOLE 10WW097D (“97D”) AT WHITEWASH SOUTH PROJECT – FIRST FOR 2010 DRILLING PROGRAM
- ASSAYS REVEAL STRONG MOLYBDENUM, COPPER AND TUNGSTEN MINERALISATION – CONFIRMS PRESENCE OF A LARGE POLYMETALLIC MINERALISED SYSTEM
- DRILL HOLE 10WW097D INTERSECTED MULTIPLE MINERALISED ZONES – HIGHLIGHTS INCLUDE 33m AT:
 - 0.15% MOLYBDENUM,
 - 0.2% COPPER,
 - 185 PPM TUNGSTEN
- ONGOING DRILLING PROGRAM FOCussed ON DETERMINING FULL EXTENT OF MINERALISED SYSTEM – CURRENTLY OPEN IN ALL DIRECTIONS
- THE MOST SIGNIFICANT MINERALISED ZONES IN 97D ARE:

	10WW097D Intersection	Grade				From	To
		m	Mo ppm	Cu %	W ppm		
Zone 1	164m	620	0.1%	129	90	253	
	inc 114m	754	0.1%	170	90	204	
	and 33m	1531	0.2%	185	99	132	
Zone 2	and 36m	431	0.16%		318	354	
	inc 11m	566	0.28%		318	329	
	and 9m	910	0.16%		345	354	
	Total 200m @	586	0.14%				

Aussie Q Resources Limited (ASX:AQR) today announced the receipt of the initial assay results from step out diamond drill hole 97D at the Company's Whitewash South Project (100% AQR owned Whitewash prospect EPM14628) in Southern Queensland. These assay results are the first from the current drilling program, with further assays pending for drill holes 98D and 99D.

The latest assays reveal significant molybdenum, copper, and tungsten mineralisation providing further confirmation that the Company's Whitewash South Project is a large mineralised system and further indicate a significant mineralised porphyry related polymict breccia or a swarm of interrelated breccia pipes emanating from multiple porphyry related intrusions.

Aussie Q Limited Executive Director, John Goody said: "While we are only in the early stages of the new drilling program at Whitewash South, we are encouraged by the assay results received from the first diamond drill hole."

"The latest assays confirm similar mineralisation to that encountered in Hole 94D in the 2009 drilling program, and AQR can now say with increased certainty that the Company expects Whitewash South to host a large mineralised system. This is further supported by significant molybdenum and copper mineralisation evident at the core of the porphyry related polymict breccia and the crackle breccia indicated visually by intense mineralisation encountered in Holes 98D and 99D announced earlier."

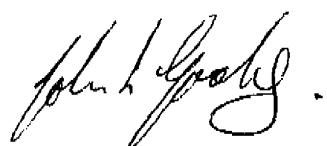

As announced to the ASX on the 24th February, the collar of Hole 97D was positioned 50m to the west of drill hole 94D and was orientated at 82° mag with a dip of -60° (see Figure 13).

The polymict breccia was intersected at 58 metres and continued to 180m (see Figures 1, 2, 3, 4, 5, 6, 7, 8, 9 and 10). A mineralised molybdenum copper stock work was encountered from 180m to the end of the hole at 402.6 metres depth (see Figures 11 and 12).

The overall mineralised zone in Hole 97D is 355m @ 400 ppm Mo and 0.1% Cu from 32m to 387m. This is broader in width to that intersected in Hole 94D indicating the potential for an exceptionally large mineralised system. Hole 97D was terminated at 402.6 metres in mineralisation that will be assessed in scheduled future drilling (see Figure 12).

"While Whitewash South appears to be a very large mineralised system, the Company is continuing to determine the full extent and the ongoing focus will be on developing an understanding of the dimensions of the system as it currently remains open in all directions. Consequently, in addition to drilling towards the perceived centre of the system to the southwest of the present drilling, drilling will radiate out from the current drill holes in all directions," Mr. Goody added.

Yours sincerely,

John Goody
Executive Director

The information in this report that relates to exploration results and mineral resources is based on information compiled by John Leslie Goody, Executive Director of Exploration, Aussie Q Resources Limited and supervised by Dr. Richard Haren who is a Member of The Australasian Institute of Mining and Metallurgy and who has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity undertaken to qualify as a Competent Person as defined in the 2004 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Dr. Richard Haren is a self employed consultant who consults to AQR and has consented to the inclusion in this report of the matters based on this information in the form and context which it appears.

**Note: Assay grades are quoted in ppm or percent (%) depending on the level of the grade
0.1% is equivalent to 1,000ppm.**
