Reverse Circulation Drill Rig Arrives at West Omai Project

The Board of Azimuth Resources Ltd is pleased to announce that the Reverse Circulation drill rig that has been contracted for a 17,000 metre drilling program arrived at the Company's West Omai Project today.

Drill crews are flying into the country, Monday October 4 and drilling is scheduled to commence on Wednesday October 6.

The first phase program of approximately 8,000 metres will confirm the historic resource and produce a JORC code compliant resource at the Hicks Prospect, after which the rig will test the Kaburi prospect, Smarts prospect and potential on strike extension of the Hicks prospect.

Azimuth now expects to complete first phase drilling at Hicks in mid to late December, 2010 and produce a maiden JORC code compliant resource at Hicks in January 2011.

Yours Faithfully

Dominic O'Sullivan
Managing Director
