Dear Sir / Madam

### **A New Discovery Identified at Central Bore East**

Eleckra Mines Limited ("Eleckra") (ASX: EKM) is pleased to announce assay results from the first batch of samples from its 17,000 metre RAB drilling program just completed around the Central Bore deposit area.

The best results, so far, came from the Central Bore East area, approximately 200 metres east of the Central Bore gold deposit, where the previous soil survey produced strong gold anomalies.

Significant RAB results include **7 metres at 4.32g/t Au from 28 metres and 6 metres at 1.39g/t Au from 24 metres.**

These results are considered comparable to the intercepts from the original RAB discovery program at the Central Bore gold deposit in 2009. Anomalous gold results have been intercepted by the drilling for a distance of at least 300 metres over an average width across strike of about 30-50 metres.

The initial results also extended the Central Bore mineralised zone about 200 metres further to the north.

Further results will be reported as they come to hand.

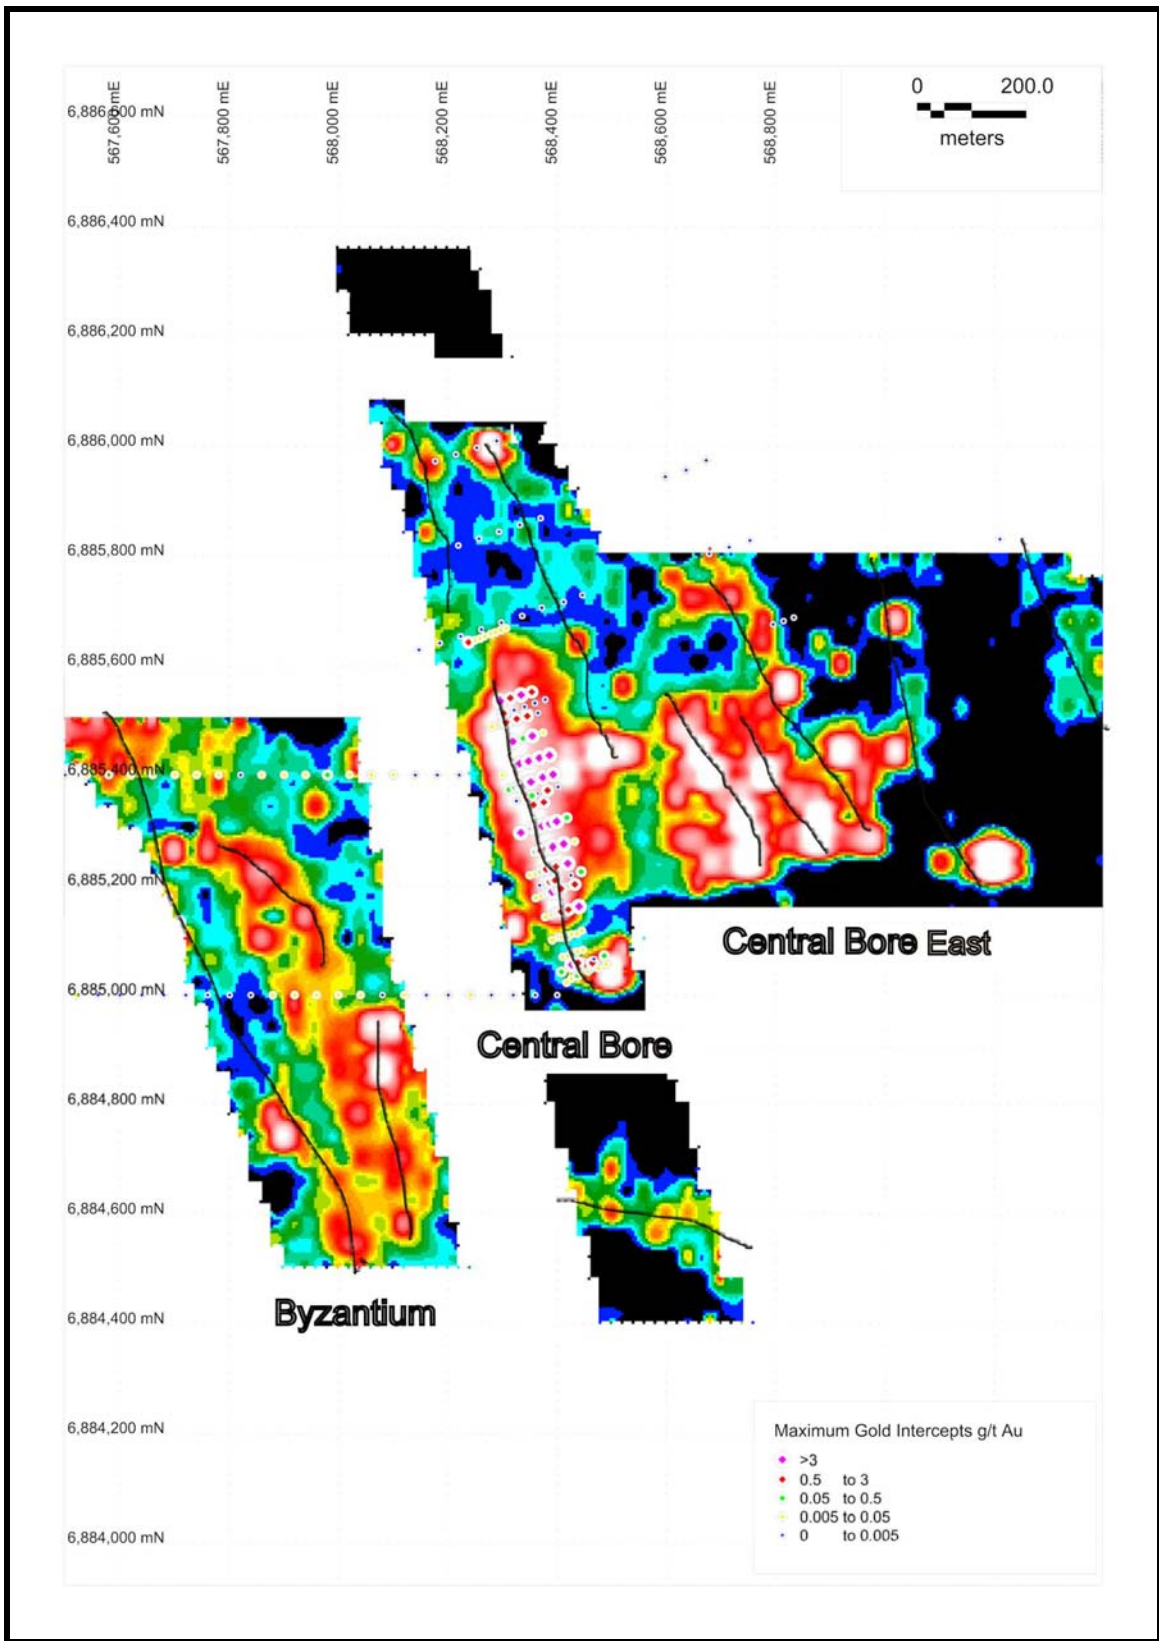

Figure 1: Image of Unlevelled Gold Anomalies from the January-February 2010 Soil Survey at Central Bore Prospect Area. The large circles indicate maximum gold intercepts in 2009 RC holes at Central Bore Gold Deposit. The black lines show gold trends.

Table 1. Summary of Significant (> 0.1 g/t Au) RAB Drill Intercepts at Central Bore Area
