### **Rawson Resources Limited ATP 837P Update**

Rawson Resources Limited ('Rawson', ASX code RAW) is pleased to announce that it has been advised by the operator of permit ATP 837P, Energetica Resources Pty. Limited (ERPL) that the Sedgley 3-D Seismic Survey in the southern part of ATP 837 in the Eastern Surat Basin in southern Queensland has been completed and is currently being processed. The survey covered an area of about 200 square kilometres of land in an area prospective for oil exploration between the Moonie Oilfield and the Cabawin Oil and Gas Field. The location and extent of the survey are shown in the figures below.

Envirovibe buggies were used on this survey to minimize the environmental impact across the area.

**Velseis envirovibe buggy on location in ATP 893P**

Prior exploratory drilling within the area has already confirmed the presence of the Precipice Sandstone reservoir, which has produced over 22 million barrels from the

Moonie Oilfield. This is the first 3-D seismic to be acquired in the area and will greatly enhance the likelihood of further oil discoveries. (See location map below)

The Sedgley Seismic Survey processing is expected to be completed in eight weeks time and the results interpreted and mapped after the processing is complete. Three potential drilling targets have previously been identified using 2-D seismic surveys during the 1960's, 1970's and 1980's. The 3-D survey will provide accurate drilling locations for these and other targets.

Participants in the deeper 'traditional' oil plays of ATP 837P are Rawson Resources Limited 50% and ERPL 50% the operator. The 3-D survey has been fully funded by TRUenergy (Qld) who farmed in to ATP837P for 70% of the Coal Seam Gas potential in ATP 837P with Rawson and ERPL each with 15% of the CSG rights.
