

WORK PROGRAMMES AND AGREEMENTS FINALISED

Highlights

- **Glandore Project**
 - **Deferred Production Agreements finalised on 3 new mining lease applications**
 - **Regional Projects**
 - **Hyvista generated anomalies to be drilled on two leases**
 - **PoWs submitted for Steeple Hill and Laverton East**
-

Deferred Production Agreements

The Directors of **Aruma Resources Limited (Aruma) (ASX:AAJ)** are pleased to announce that the Company has finalised Deferred Production Agreements on three Mining Leases at Glandore. This will enable the Company to commence production when reserves are delineated. These were amicably negotiated with two native title parties. The native title party covering the eastern areas will be involved in a tour of all the Company's leases when the area dries out from recent heavy rain in the goldfields.

Assays

There are some 720 assays to be finalised, and these are expected in the coming fortnight subject to further delays at the laboratories. Once these are received the next drilling program at Glandore can be planned to investigate the high grade anomalies

Programme of Works

The Company has submitted two Programme of Work (PoW) forms to the Department of Mines and Petroleum for approval. These are for drilling coincident Hyvista and geochemical anomalies at both Steeple Hill and Laverton East. Laverton East has a strong goethite anomaly Hyvista coincident with the rock chip gold anomalism in the main lease area (see figure 2 below), this will be investigated in some 500 augur/RAB sites to sample below the hardpan surface material on a 100m by 100m spacing.

Steeple Hill will be RAB drilled in 65 sites to Blade Refusal to investigate the possibility of mineralisation for both gold and base metal sulphides over Hyvista and magnetic/geochemical anomalies as shown in Figure 1. The area is sulphur rich and the ultramafic and magnetic targets are prospective for base metals.

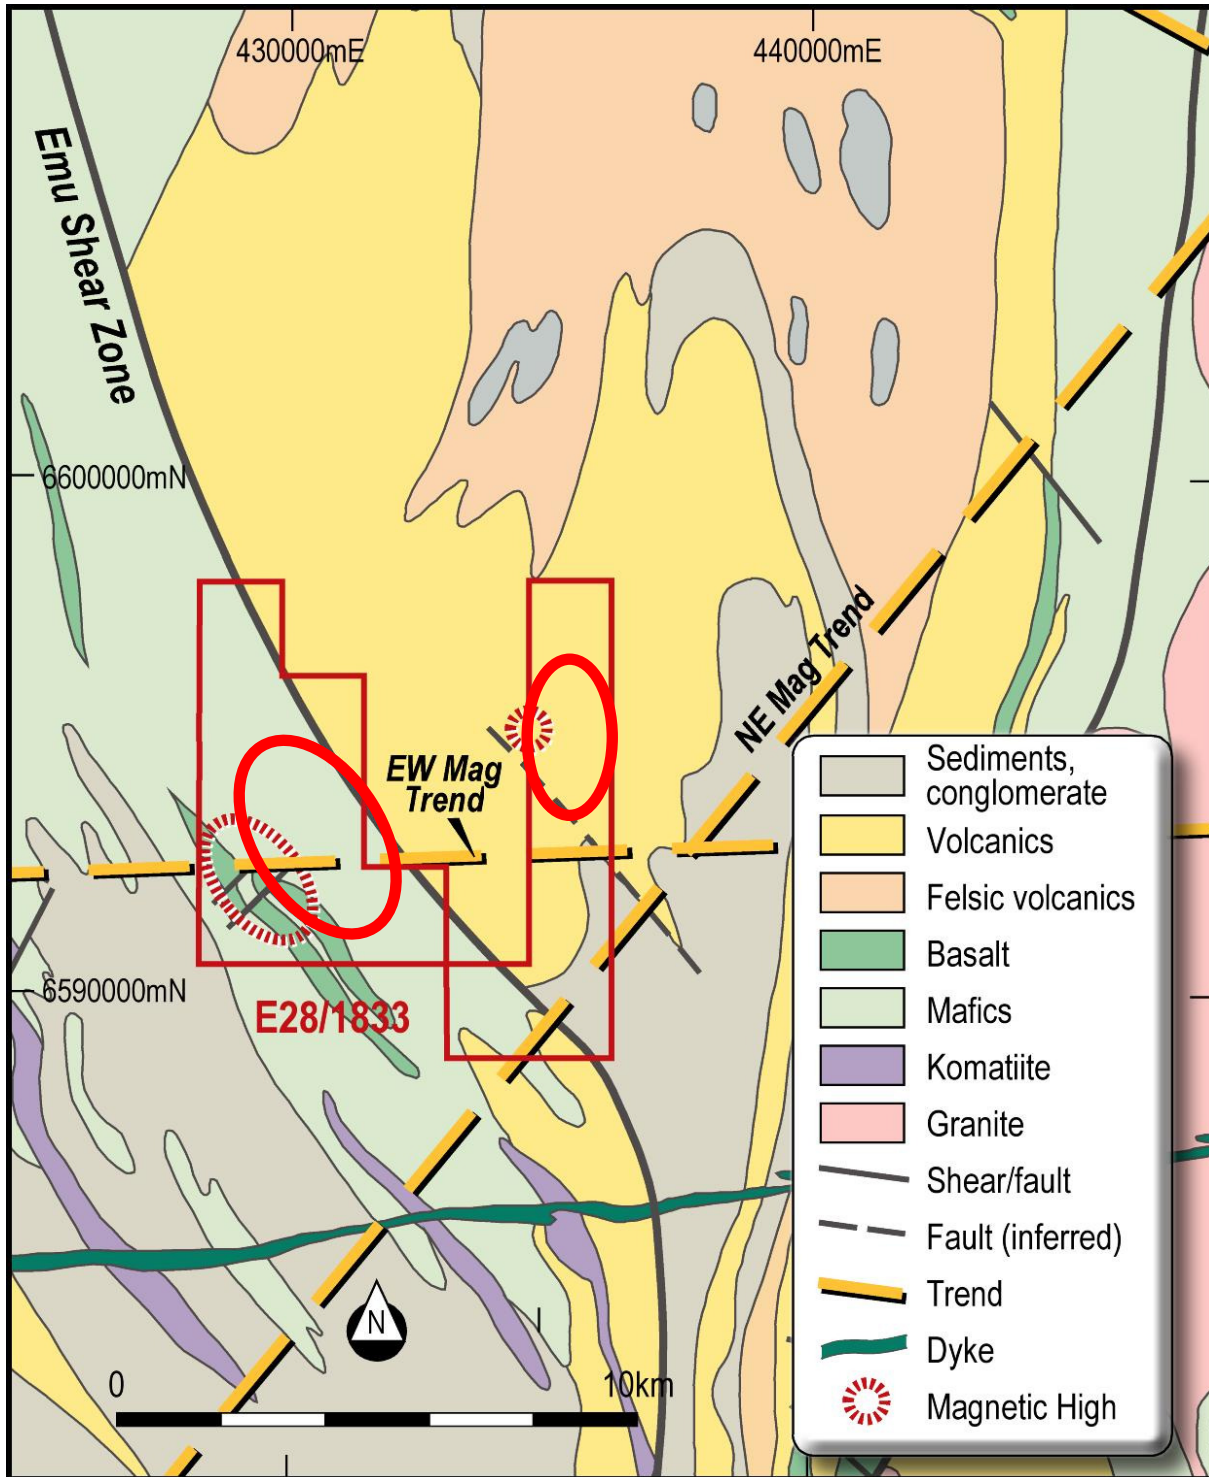

Figure 1 Steeple Hill lease with the Hyvista anomaly zones shown in the red ellipses.

WORK PROGRAMMES AND AGREEMENTS FINALISED

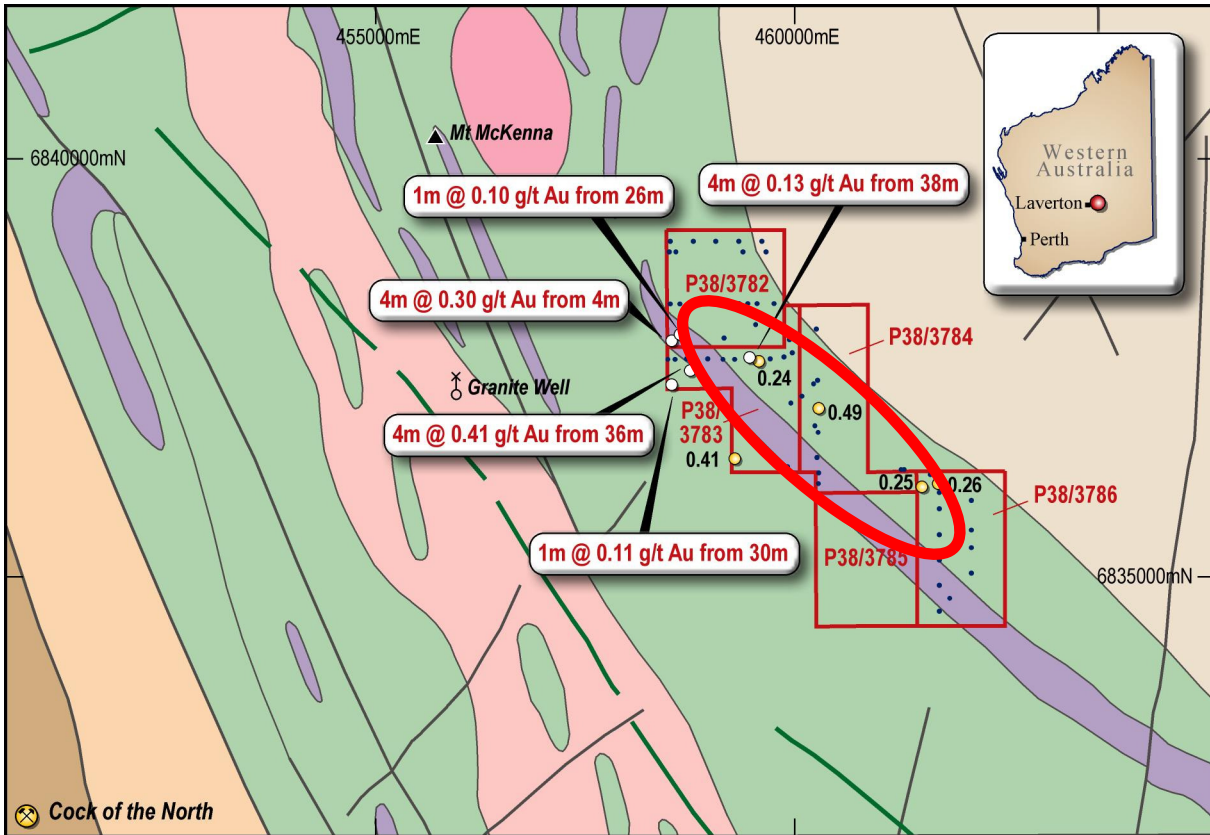

Figure 2 Laverton East Leases with the Hyvista goethite anomaly zone is shown in the red ellipse.
